The Vigilant Single Stroke

No. 20—6 Ohms

Schedule "E"

Magnets and armature are so arranged that the armature is strongly attracted from a considerable distance, giving the hammer a long sweep and a powerful blow.

Striker: The hammer is attached to the hammer rod by a strong flat spring, causing a quick recoil, resulting in clear and distinct signals; tension and strength of blow are adjustable.

Single Stroke: Single stroke bells can be wound to operate on direct current up to 500 volts.

Vibrating: Vibrating bells are furnished up to 110 volts direct current.

Finish: 2½ inch to 6 inch bells, japanned base; all other parts nicked. Larger than 6 inch, japanned base; other parts polished brass.

List No.	Sizes Ins.	List Price Single Stroke	List Price Vibrating	*List Price Combination S. S. & Vib	List No.	Sizes Ins.	List Price Single Stroke	List Price Vibrating	*List Price Combination S. S. & Vib

NO. 21 F. P. ELECTRIC SINGLE STROKE ALARM BELL Schedule "R"

A special form of the well-known Edwards Vigilant Electric Single Stroke Bell. Designed especially to meet requirements of Fire Prevention laws.

Direct Acting; no loss of power through compound levers or heavy retracting springs and is therefore highly efficient. No winding ever required.

Heavy Hammer; long stroke.

Fully protected; it is weather, dust and bugproof.

Separable conduit fitting, drilled and tapped top and bottom for ½ inch conduit (¾ inch if desired) so that conduit work may be completed and wire pulled in; bells may be attached at any time by machine screws supplied with them. Best results obtained by mounting bell with gong to the left. Finish, red enamel.

For use with surface conduit.

6 Inch \$14.00

No. 21

SIGNAL BELLS AND GONGS

Recti Bells

GENERAL DESCRIPTION

The Recti Bell meets with well-deserved success the demand for a rugged and powerful vibrating bell of lasting durability and of the most rigid construction, for weatherproof use. Of the various styles the No. 100 can be supplied to operate on either battery or higher voltages up to 225 volts direct current. And in sizes 4 to 10 inches, it can be arranged for operation on alternating current voltages 18 to 220, 25, 40 or 60 cycles, single phase. The No. 100A is particularly adapted to electric vehicle service. The No. 217 Recti is for operation on Direct Current Voltages, 250 to 600 directly on the line without external resistance, and operation under any of the foregoing conditions is guaranteed. When used on high voltages they are intended for intermittent service.

Special attention is invited to the action of the hammer, which, unlike any other bell, operates in a straight line, giving a direct blow; and as one end of the solid brass hammer rod is supported by a swinging joint, and the other end passes through the case, it is always secure, and can not get out of order.

Another positive improvement is that carbon is used for contact points. Thus the points can not corrode or oxidize, will not melt and will outwear platinum or other metal. May be replaced without taking the bell apart.

SPECIFICATIONS

Heavy cast jannaped box with oil-soaked felt gasket enclosing mechanism; direct-acting straight line hammer rod; magnets impregnated with moisture-resisting compound; contacts extra heavy, and in No. 100 sizes 5-inch and upward carbon contacts are made from standard size carbon rod; phosphor bronze springs, best grade cast bell metal gongs. Types shown are adapted for fire alarms, automobiles, factories, signal systems, mine or marine use. The mechanism is entirely insulated from the case, which is not, at any time, a part of circuit.

RECTI BELLS
DIRECT CURRENT

No. 100U

No. 217

Recti Underwriter Type

No. 100U

Schedule "E"

Specially designed for and approved by National Board of Fire Underwriters, for use on sprinkler systems and on all voltages up to 250 volts. This bell embodies the same scientific proportions of the magnets to obtain maximum strength with greatest battery economy which is found in other types of the Recti bell. This, augmented by the absence of friction and drag at the pivots, produces a long, powerful, direct and rapid blow.

Binding posts are not used; instead, flexible wire leads are brought from the case through insulating bushings, to which line wires can be properly connected. This is a method preferred by the Underwriters' Laboratory and many engineers as superior to a friction contact.

List No.	Size	*List Price Each

Recti Automobile Type

**No. 100A
Standard Up to 88 Volts**

Schedule "E"

The mechanism is positively dust and mudproof, and may be placed on the outside of a vehicle without being encased. In the 100A type the gong is fastened to the base with the concave side in a reverse position, to prevent the accumulation of mud, etc., which would deaden the sound.

The sizes generally used are 5, 6, 7, 8 or 10 inches, and to operate on a direct current from either primary or storage batteries.

In ordering, be particular to state the voltage of battery they are to work on.

General voltages for automobile bells are 22, 44 or 88 volts.

THE EDWARDS RIOT BELL "Motor Driven" Bells

An absolutely new principle—a very powerful quick responding, loud ringing, weatherproof, revolving stroke bell—bells that obtain all the sound that the gong can produce. A smooth running, high efficiency motor, especially designed for the purpose used. They are designed to operate on battery voltages of 6 and higher, also lighting circuits of 110 volts alternating and direct. The full power of the revolution and its momentum produce a strength of blow never before obtained. No adjustment is needed. No parts to wear out. No gears to stick. No heavy parts to move. Striker is mounted directly on motor shaft.

No. 300
The Riot Bell

No. 320
The Liberty Riot Bell

No. 310
The Double Gong Riot Bell

NO. 300 GENERAL SIGNAL RIOT BELL

Schedule "E"

Available wherever a loud ringing alarm or signal bell is desired. For operation on alternating or direct current lighting circuits or battery. The bells are weatherproof and may be used out of doors. Made in sizes 10 to 18 inches for all voltages and frequencies. Furnished for 6 volt battery circuit when not otherwise specified.

NO. 320 LIBERTY RIOT BELL

Schedule "E"

Designed for use on fire fighting apparatus vehicles only. An adaptation of the Riot movement to the engine or locomotive type gong. Replaces the hand operated type of same bell now widely in use. Gives a greater volume of sound than the hand operated bell, and is controlled by the driver from a push button on the steering wheel. It is the different signal so essential to the rapidly moving fire department vehicle. Additional buttons may be placed on other parts of the vehicle if desired, enabling others than the driver to operate the bell. Economical in current consumption, it can be operated on the ignition batteries. Where vehicles are equipped with electric starting and lighting system, the Riot Liberty Bell can be furnished without extra charge to operate on it. This saves the cost of and space for separate battery. Where this type of gong, hand operated, is now used, the Riot attachment can be furnished to fit the gong. By sending gong to the factory, attachment can be applied to best effect.

List No.	Size Inches	Voltage	*List Price
361200	Liberty Riot Bell	10	\$90.00
360097	Riot attachment only		70.00

NO. 310 DOUBLE GONG RIOT BELL

Schedule "E"

For fire engines, ambulances and patrol wagons. The only signal sufficiently different and with clamorousness enough to meet the urgent necessity of fire fighting and emergency vehicles.

They operate on a 6 volt battery by steering wheel push, and produce a far-reaching, effective and entirely different warning of the approach: a rigorous, emphatic demand for the right of way in a tone loud enough and strong enough to be heard at a distance, enabling pedestrians or traffic to keep the way open.

An adaptation of the Riot Bell using two gongs and a double striker. The gongs are struck alternately, and as the gongs are different tones the volume of sound is greatly intensified.

Fancy Gongs

Schedule "E"

For prices on bells equipped with fancy gongs, see the "Arrow," the "Cadet," the "Dixie" and the "Lungen" bells listed on preceding pages.

List price for gong only, \$0.30.

Monitor Bells

THE RE-AL—NO. 156—3 OHMS Schedule "R"

No. 156

Entire movement a self-contained unit, fastened to base by heavy screws. All adjustments, screws and fastening lugs positively locked. Direct-acting straight line hammer rod; heavy contact springs of phosphor bronze; large wiping contact points; nickel-plated gong; black enameled base.

Weatherproof, bugproof, compact, substantial. Especially adapted to street cars, apartment houses, annunciator work and for positive operation under the most severe conditions.

List No.	*List Price

Special resistance, see table of additions on special page that follows.

STREET CAR BELL NO. 181 Schedule "E"

A special adaptation of the RE-AL Monitor Bell for street car use. The magnets are treated with moisture-repelling compound; extra heavy contacts are used and the gong is securely riveted to base. Outside of base is spotted to indicate hammer point of contact on the gong and a rubber gasket can be supplied for use between base and mounting surface, so that by installing with hammer spot pointing downward maximum operation will be obtained as well as making it waterproof.

List No.	*List Price
181 Street Car Bell.....	Each \$1.25

No. 181

STREET CAR BUZZER NO. 182 Schedule "E"

A distinct departure from the usual form of buzzer in which the vibrations of armature are depended on for the production of sound in that the complete unit movement of the RE-AL Bell is enclosed in substantial iron case without holes or openings of any kind, forming a fully protected, weather and dustproof unit, and in which the sound is very much magnified, by arranging hammer to strike directly on the inside of this iron protecting case, producing, in addition to volume, a character of sound distinctly audible above all others encountered in street car service.

It is safe from attempt of car operatives or other unauthorized persons to adjust or modify its operation, a condition which must at once be appreciated by those interested in maintenance of service.

It is recommended that in mounting on car a suitable gasket be placed between buzzer and car, and when so mounted it will be found to be not only weather and dustproof, but air-tight, thus excluding all external elements which have in the past resulted in serious interruptions of service. As regularly supplied, buzzers are arranged for operation on two dry cells or equivalent.

Finish: Black enamel.

FARADAY SKELETON BELLS

VIBRATING TYPE, BELL METAL GONGS, CLASS A

Faraday Skeleton Bell

"High-Power" Armature.—Patented "High-Power" armature allows the keeping of armature in magnetic field up to the moment of striking the gong. Breakage of Springs Cannot Disable Bell.

Insulated Mechanism.—Frame of bell carries no current at any time, as entire electrical mechanism is insulated from frame casting. Bells may be mounted on metal without fear of grounding.

Solid Back.—Solid back prevents dampness from getting into insulation washers on back of bell, or affecting magnet windings. All insulation washers sealed in with waterproof wax.

Locking Side-Contact Post.—New patented split-section side-contact post compresses both sections against thread of platinum contact screw and positively locks with cone cap piece having taper thread; no injuring of platinum screw thread and adjusting to a thousandth of inch assured at all times.

Solid Trunnion Frame.—Solid trunnion frame cannot work loose or move in any direction. Improved split section, replacing old locknut on trunnion frame, compresses against upper trunnion screw, and no amount of jarring can loosen the upper bearing.

Cylindrical Trunnion Bearings, Extra Heavy Cylindrical Type.—There is no possibility of armature breaking away from either upper or lower bearing; construction utilizes full strength of both upper and lower trunnion frame casting.

Non-Turning Contact and Binding Posts.—Non-turning and non-loosening binding posts equipped with split steel lock-washers prevent connections from ever jarring loose.

Contact Points.—Contact points are made of platinoïd or pure platinum, as specified, and are always plainly marked on both screw and spring. Platinoïd contacts furnished, unless otherwise specified.

Note: Faraday Skeleton Bells will be wound, when specially ordered, to any resistance up to 2000 ohms; however, we do not recommend Skeleton Bells for 110, 220 or 500 volts service. For this service, Faraday Enclosed Type Bells (with no exposed terminals), shown on other pages, should be invariably used.

Faraday Skeleton Bells up to 6-inch, inclusive, will operate on both A. C. and D. C. circuits when wound to proper resistance (1750 to 2500 ohms for 100-120 volts D. C.; 110 ohms for 60-cycle, 100-115 volts A. C.). Above 6-inch these gongs will not give satisfactory service on A. C. circuits, and Faraday Double-Gong Bells must be used.

Faraday Skeleton Type Gongs will be furnished single-stroke, when specially ordered, at \$0.50 net additional, but for important single-stroke work the Faraday Single-Stroke Gong is recommended, and the slight advance in price will be found more than justified.

PRICE LIST

List No.	Size, Gong Inches	Frame No.	Resistance in Ohms	List Price Each				
				Less than 6	6-11	12-24	25 to 49	50 and Over

FS-18	18	6	8	80.40	72.08	66.54	58.24	55.44

Add to above prices for pure platinum contacts, 78 cents list for bells up to and including 6 inches in diameter; \$1.30 list for bells 7 inches and larger. Add for Triplex Platinum Contacts, \$1.50 net to above prices. Special resistance gongs to order—for prices, see special listing elsewhere.

Assortment of all sizes of Faraday Skeleton and Competition Skeleton Bells permitted to make up quantity, but Enclosed Type Bells cannot be included with Skeleton Bells to make up quantity.

Note: The Underwriters' Laboratories approve only the Enclosed Type Bell for signal systems coming under their supervision.

BELLS AND BUZZERS

COMPETITION SKELETON BELLS, CLASS B

Competition Class B Bells differ from the Faraday Class A principally in the following details:

Stamped steel gongs in place of bell-metal gongs.

Old style armature in place of "High-power" armature.

Mechanism not insulated from frame casting as in Faraday Class A.

Silver contacts in place of platinum and platinoid.

Less accurate trunnion construction and not "solid-back."

Binding posts simply non-turning, in place of Faraday Patented Duplex Posts, non-turning and non-loosening.

If bells are required wound to special resistance, or with any special features other than regularly embodied in Competition Bells, Faraday Class A Bells must be specified.

Competition Skeleton Bell

List No.	Size Gong Inches	Frame No.	Resistance in Ohms	List Price Each		
				Less than 6	6 to 11	12 to 24
SC-2½	2½	1	1.5	\$2.70	\$2.40	\$2.22
SC-3	3	1	1.5	2.72	2.46	2.26
SC-4	4	1	1.5	2.88	2.60	2.40

SC-12	12	X-5	5.2	14.00	12.56	11.58

Class B bells are not wound to any special resistance. They are made and carried in stock only as listed. Assortment of all sizes of Competition Skeleton and Faraday Skeleton Bells permitted to make up quantity, but Enclosed Type Bells cannot be included.

Nos. 93, 99 and 101 Buzzers, Cover in Position

Mechanism of Nos. 91, 93, 99, 95, 925 and 101 Buzzers

Nos. 94, 924 Buzzer Cover Removed

Faraday Car Signal Buzzer Standard Lettered Cover

FARADAY ENCLOSED TYPE BUZZERS

The Standard Nos. 91, 93, 99, 95, 925 and 101 have the Faraday "High-power" armature; Nos. 94 and 924 Extra Loud, in addition to the "High-power" armature, has a heavy steel ball at the end of the armature rod—this steel ball striking on extension of the base frame casting with such force and rapidity as to make the signal three times as powerful as the No. 99 or No. 101.

The mechanism of these buzzers (except No. 91) is protected by a heavy bauer-barff iron case; all connections for circuit wires are within the case itself, no outside terminals.

Frame of buzzer carries no current at any time, as entire electrical mechanism is insulated from frame casting. These buzzers may be mounted on metal without fear of grounding. Breakage of tension spring will not disable mechanism.

Side contact adjustment is of patented micrometer-lock-type. Triplex Contacts will be furnished when specially ordered. Contacts are always pure platinum.

Car-Signal Buzzers Nos. 94, 95, 924 and 925 are made in two types, 600 volts and battery type. The first, two numbers covering battery type and the last two 600 volt type.

List No.	Style	Frame No.	Resistance in Ohms	Size Inches	List Price Each
93	Enclosed	00	1.4	2½ x 2½ x 1½	\$3.60
91	No Cover	00	1.4	2½ x 2½ x 1½	3.30

95	Enclosed	1	1.5	4¼ x 4 x 2½	4.80
924	Enclosed	1	1000.	4¼ x 4 x 2½	7.80
925	Enclosed	1	1000.	4¼ x 4 x 2½	7.50

Triplex Platinum Contacts, \$1.50 net per buzzer; Triplex Contacts not furnished on Nos. 91 and 93 Buzzers.

NOTE: Special resistance buzzers to order—for prices, see special listing elsewhere.

CAR SIGNAL OUTFITS

High Voltage Car Signal Outfit
High Voltage Outfit
 Weatherproof—550 to 660 Volts

Car Signal Outfits consist of two buzzers wound to a resistance of 1000 ohms and one 600 volt resistance panel. The resistance panel is mounted in a substantial porcelain base with necessary barriers between metal-fuse, and the outfit has protection fuse in the panel itself. Resistance condenser cartridge is as easily removable as an enclosed

Resistance panel measures $4\frac{3}{4}$ inches wide by $6\frac{1}{4}$ inches long by 3 inches high over all.

The buzzers are wound to a resistance of 1000 ohms and all insulation details tested at 2000 volts A.C., making positive, satisfactory operation on 550-600 volt street car circuits without any chance of insulation-breakdown.

List No.	General Description	List Price Each
CS-800	Two Faraday Car Signal Buzzers, wound to operate on 550-600 volts, with resistance-condenser panel, fuses, etc., complete equipment for 1 car, with 28 push buttons..	\$28.00
CS-900	Resistance-condenser panel, complete.....	6.80
CS-925	Faraday Car Signal Buzzer, wound to 1000 ohms, to operate on 550-600 volt circuit in connection with resistance-condenser panel, No. CS-900, each.....	7.80
CS-950	Extra resistance-condenser cartridge with terminal clips, each.....	2.80
CS-930	Extra push buttons, each.....	.80

Model SA-95 Buzzer
Cover Removed

Model SA-94 Buzzer
Cover Removed

Patterson Battery Set
Strip Type B

Low Voltage Outfit

These outfits consist of either the Model SA-95 or Model SA-94 Faraday Car Signal Buzzer with Patterson Battery Sets either of the Strip Type B or the Steel Box Type BB.

Both Nos. SA-94 and SA-95 buzzers will be furnished in lots of 100 or more with name of railway company cast on the cover and brought out in gilt, without extra charge. Special resistance buzzers furnished to order. Prices same as for No. 1 frame enclosed type bells. Triplex pure platinum contacts, \$3 net per buzzer extra.

15908	Faraday Car Signal Buzzer, No. SA-95 standard.....	\$4.80
15909	Faraday Car Signal Buzzer, No. SA-94 extra loud.....	5.10
15910	Box Type Patterson Battery Set, street railway Type BB-2 (2 cell size) complete, with steel case and padlock (no cells).....	7.20
15911	Same as above, except 3 cell size.....	9.36
15912	Same as above, except 4 cell size.....	11.40
15913	Strip Type Patterson Battery Set, street railway Type B (2 cell size), no cells.....	3.60
15914	Same as above, except 3 cell size.....	5.40
15915	Same as above, except 4 cell size.....	7.20

NOTE: Buzzers for operation on 4 cell outfits should be ordered wound to 5 ohms resistance. No extra charge for this. No battery cells are included in the above prices.

FARADAY BELLS WITH FANCY GONGS

Skeleton Bell
With Cow Gong

Enclosed Type
Model A
With Cow Gong

Rectangular or Cow Gong

Garland Gong

Sleigh Gong

Open Breakfast,
Tea or House Gong

Skeleton and Enclosed Types

Both Faraday Skeleton and Faraday Enclosed Type Bells will be furnished with what is termed "fancy gongs" in place of regular round gongs, and, when so ordered on skeleton frames, same may be included to make up quantity.

Fancy gong equipment is usually required when a different sounding gong is wanted, and for this we particularly recommend the rectangular or cow gong as by far the most penetrating as well as the most different from regular round gongs.

These bells cannot be wound to special resistance to operate on A. C. circuits above the No. 2 frame; when required above this, "Double Gong" Bells shown on another page must be used.

These gongs will be furnished "Single-Stroke" when specially ordered at \$0.50 net additional, but for important single-stroke work the special Faraday Single-Stroke Gong shown on another page is recommended, and the slight advance in cost found more than justified.

NOTE: The Underwriters' Laboratories approve only the Enclosed Type Bell for signal systems coming under their supervision.

ENCLOSED-TYPE FARADAY SIGNAL BELLS

Standard Models A, B and C

Faraday Enclosed-Type Bells are recommended whenever the gong is exposed to dust, dampness or mechanical injury. They are used for important signal work by leading railroads, fire alarm companies, etc. The mechanism is protected by a heavy bauer-barff iron case.

Faraday Bells have "High-power" mechanism, keeping armature in magnetic field up to the moment ball strikes gong in place of opening at contact points at beginning of stroke as all other mechanisms do.

Breakage of springs cannot disable bell.

Frame of bell carries no current at any time, as the entire mechanism is insulated from frame casting.

Contacts are always pure platinum. Model C is the best design for exposed locations, and Model B the most popular for all-around work.

Faraday Enclosed-Type Bells cannot be wound to special resistance to operate on A. C. circuits above the 6 inch size; when required above 6 inch, "Double-Gong" Bells shown on another page must be used.

Faraday Enclosed-Type Gongs will be furnished "Single-Stroke" when specially ordered, at \$0.50 net additional, but for important single-stroke work the special Faraday Single-Stroke Gong shown on another page is recommended, and the slight advance in cost found more than justified.

NOTE: The Underwriters' Laboratories approve Faraday Enclosed-Type Bells for signal systems coming under their supervision.

INSPECTORS' TYPE FARADAY SIGNAL BELLS

Model AI

Model BI

Model CI

Enclosed Vibrating Type Weatherproof

The above illustrations show Faraday Enclosed Inspectors' Type Bells with three styles of covers, A, B and C.

In Inspectors' Type Models AI, BI, CI, the cover, instead of being held down by four machine screws as in Models A, B and C, fits down onto four brass corner dowel pins, and, while held firmly in place by large nickel plated knurled thumb nut in center of cover, is removable in a second without tools. Models AI, BI and CI were specially designed to permit frequent inspection of signal equipment.

Inspectors' Type Bells cannot be wound to special resistance to operate on A. C. circuits above the 6 inch size; when required above 6 inch, "Double Gong" Bells shown on another page must be used.

Inspectors' Type Gongs will be furnished "Single-Stroke" when specially ordered, at \$0.50 net additional, but for important single-stroke work the special Faraday Single-Stroke Gong shown on another page is recommended, and the slight advance in cost found more than justified.

NOTE: The Underwriters' Laboratories approve Faraday Enclosed-Type Bells for signal systems coming under their supervision.

Model AC
For Conduit WorkModel BC
For Conduit WorkModel CC
For Conduit WorkEnclosed Vibrating Type
Weatherproof

These illustrations show Faraday Enclosed Conduit Type Models with three styles of covers, A, B, and C.

Faraday Conduit Type Signal Gongs make possible the installation of a signal gong system on the outside of a building or on the inside with positive assurance that no breakdown can occur.

Heavy marine gaskets between conduit box back and bell frame prevent entrance of dampness or water, and mechanism of gong, connections, etc., is absolutely protected at all times.

Surface-Conduit Bells cannot be wound to special resistance to operate on A. C. circuits above the 6 inch size; when required above 6 inch, "Double-Gong" Bells shown on another page must be used.

Surface-Conduit Gongs will be furnished "Single-Stroke" when specially ordered, at \$0.50 net additional, but for important single-stroke work the special Faraday Single-Stroke Gong shown on another page is recommended, and the slight advance in cost found more than justified.

NOTE: The Underwriters' Laboratories approve Faraday Enclosed-Type Bells for signal systems coming under their supervision.

CONCEALED-CONDUIT FARADAY BELLS

Enlarged View of
Wall Outlet Box on Which
Bell Is Mounted

Model AFC

Model BFC

Model CFC

Enclosed Vibrating Type

Illustrations show the standard Faraday Enclosed Type Signal Gong with flush-setting outlet box for concealed conduit installations. This makes an ideal installation for new building construction, particularly for buildings where gongs are to be placed in each hall, one above the other, from the basement to the top floor, as is so generally required nowadays for fire alarm work.

Outlet boxes are cast iron, with broad rubber gaskets on face. They are regularly drilled to slip $\frac{1}{2}$ inch conduit.

Frame of bell carries no current at any time, as entire electrical mechanism is insulated from frame casting.

Faraday Gongs will be furnished, when specially ordered, wound to special resistance to operate direct in multiple without external resistance, on 110 or 220-volt D. C. circuits. For 600-volt D. C. circuits, they will be wound to a resistance of 1000 ohms and should be used with special Faraday External Resistance, as shown in blue print attached to each gong sent out, or will be wound to 150 ohms for use in the old fashioned way with bank of 5 lamps.

Faraday Gongs up to 6-inch, inclusive, will, when wound to proper resistance (1750 to 2500 ohms for 100-125 volts D. C. and 110 ohms for 100-115 volts A. C., 60-cycle), operate on D. C. and A. C. circuits. Above 6-inch these bells will not give satisfactory service on A. C., and Faraday Double-Gong Bells must be used.

Other model Faraday Gongs wanted for concealed conduit installations can be furnished at proportionate advance in price.

These bells cannot be wound to special resistance to operate on A. C. circuits above the 6 inch size; when required above 6 inch, "Double-Gong" Bells shown on another page must be used.

These gongs will be furnished "Single-Stroke" when specially ordered, at \$0.50 net additional, but for important single-stroke work the special Faraday Single-Stroke Gong shown on another page is recommended, and the slight advance in cost found more than justified.

Note: The Underwriters' Laboratories approve only the Enclosed-Type Bell for signal systems coming under their supervision.

FLUSH-CONDUIT BELLS, MODELS AFC, BFC AND CFC

Special resistance gongs made to order. For prices, see special listing elsewhere.

SCREEN-ENCLOSED FARADAY GONGS

Model CS
Regular Pattern

Model CCS
Conduit Pattern

Vibrating Weatherproof Type

Faraday Screen-Enclosed Type Signal Gongs have been brought out to meet the increasing demand for a signal gong with mechanism, gong, hammer rod and ball, all protected from external injury, nesting of birds, etc.

Model CS is not arranged for conduit work, whereas Model CCS is made for conduit work.

Both Models CS and CCS gongs are identical with other Faraday Enclosed Type Models in detail of mechanism; both have new patented "High-Power" armature, micrometer side contact adjustment, mechanism fully insulated from frame casting which at no time carries any current; bells may be mounted on metal without fear of grounding; rubber gaskets between frame and cover prevent dampness from getting at interior; coils are waterproof.

These bells cannot be wound to special resistance to operate on A. C. circuits above the 6 inch size; when required above 6 inch, "Double-Gong" Bells shown on another page must be used.

These gongs will be furnished "Single-Stroke" when specially ordered, at \$0.50 net additional, but for important single-stroke work the special Faraday Single-Stroke Gong shown on another page is recommended, and the slight advance in cost found more than justified.

NOTE: The Underwriters' Laboratories approve Faraday Bells for signal systems coming under their supervision.

SCREEN-ENCLOSED GONGS

Bell Metal Gongs, Pure Platinum Contacts, No Outside Terminals

10.....	4	5.2	41.40	58.20
12.....	X-5	5.2	55.80	73.80

Add for "Triplex" Platinum Contacts, \$1.50 net to above prices.

Faraday Gongs shown above will be furnished, when specially ordered, wound to special resistance to operate direct in multiple without external resistance on 110 or 220-volt D. C. circuits. For 600-volt D. C. circuits, they will be wound to a resistance of 1000 ohms and should be used with special Faraday External Resistance, as shown in blue print attached to each gong sent out, or will be wound to 150 ohms for use in the old-fashioned way with bank of 5 lamps.

Faraday Gongs up to 6-inch, inclusive, will, when wound to proper resistance (1750 to 2500 ohms for D. C., 100-125 volts, and 110 ohms for 60 cycle A. C., 100-115 volts), operate on D. C. and A. C. circuits above 6-inch, these bells will not give satisfactory service on alternating current and Faraday Double Gong Bells must be used.

Above models Faraday Enclosed Type Gongs will be furnished single stroke when specially ordered at a price of \$0.50 net additional.

Special resistance bells made to order. For prices, see special listing elsewhere.

"Hammer-Blow"

Model "BVH"
"Hammer-Blow"

Mechanism of "Hammer-Blow"
Faraday Gong

Model "CVH"
"Hammer-Blow"

Hammer-Blow "High-Power" Gongs

For Battery and D.C. Circuits

Hammer-Blow High-Power Faraday Signal Gongs, Models "AVH," "BVH" and "CVH" are superior to any type of signal gong made, except the Under-Dome model, which has similar mechanical detail. This mechanism gives a long, slow, hammer-blow movement—very similar to a powerful electro-mechanical gong—but having no clockwork mechanism, of course, requires no winding up, as does the electro-mechanical type.

The long, slow, powerful movement in this mechanism is obtained by means of the Faraday multiple gear between armature and hammer-rod—a feature that with a $\frac{3}{8}$ inch movement of armature permits, for example, in a 10 inch size gong a 3 inch movement of the hammer-ball.

Semi-flexible recoil type hammer-rod guarantees a clear, unmuffled blow on the gong—a most valuable advantage over the usual hammer-rod construction of other makes.

No other type of gong on the market can be operated with the long, powerful hammer-blow feature, for without the patented Faraday High-Power armature construction, this type of gong would be impossible; with this patented feature in models "AVH," "BVH" and "CVH" Gongs, the armature is held in the magnetic field with current on coils up to the moment the hammer-rod ball strikes the gong; this design gong gives twice the power of any other make of gong, because in the Faraday construction, contact points don't open with the forward movement of the armature to cut off current, but current is allowed to stay on the field coils until the end of stroke.

Breakage of springs cannot disable this model Faraday Gong, whereas with every competing make of gong a broken spring means the failure of the signal.

Pure platinum contacts, waterproof magnet coil windings, micrometer pattern contact posts, non-turning and non-loosening binding posts, bell metal gongs, rubber gasketed weatherproof and dustproof casings, sealed-in-back connections, no exposed terminals, lock washers on all binding posts, etc.—all Enclosed Type Faraday Gong standards are embodied in these models "AVH," "BVH" and "CVH."

"SVH" Gongs same resistances as corresponding sizes Enclosed Types. Add for Triplex Platinum Contacts, \$1.50 net to above prices. Above cannot be assorted with other types to make up quantity.

The above gongs will be furnished at no extra cost to operate in any position (not solely with gong up as cuts show) but to obtain same, it must be specially noted that gongs are required with tension springs. Special resistance gongs to order. For prices see special listing elsewhere.

SINGLE-STROKE FARADAY BELLS ENCLOSED AND SKELETON TYPES For Battery and D.C. Circuits

Model "ASS"
Single-Stroke Enclosed Type, with Multiple Gear

Model "BSS"
Single-Stroke Enclosed Type, with Multiple Gear

Model "CSS"
Single-Stroke Enclosed Type, with Multiple Gear

Model "SSS"
Single-Stroke Skeleton Type, with Multiple Gear

"ASS," "BSS" and "CSS" Gongs are the most powerful and longest movement single-stroke gongs made—see mechanism cut on page showing "AVH" Models.

These enclosed types are far superior to skeleton types, and the use of the open-skeleton type should be limited to work where expense is the controlling factor, not long service and reliability.

The wonderfully long stroke of this gong is very similar to a powerful electro-mechanical gong, but, having no clockwork mechanism, of course requires no winding up, as does the electro-mechanical type.

Semi-flexible recoil-type hammer-rod guarantees a clear, unmuffled blow on gong, with never a double stroke possible—a most valuable advantage over the usual hammer-rod construction of other makes.

Single-stroke gongs are best connected in series (unlike vibrating gongs), but may be connected in multiple, if for some special reason multiple connection is necessary.

COMBINATION SINGLE-STROKE AND VIBRATING GONGS

ENCLOSED TYPES "AVS," "BVS," "CVS"

Models "AVS," "BVS" and "CVS" have hammer-blow type mechanism and three terminal binding-posts; they should be wired up to a three-wire circuit and should always, of course, be connected in multiple; when this is done, gongs may be operated, both single-stroke and vibrating at will; the operation of these gongs is perfect for both vibrating and single-stroke; they are like cuts, except that they have two (2) additional terminals on the outside of base-castings.

SINGLE-STROKE GONGS—SKELETON TYPE—"SSS"

Skeleton type single-stroke gongs are not recommended except where limitation of expense is controlling factor; the mechanism of these skeleton type gongs is, however, well made and same are still used, though enclosed types listed at top of page are preferable.

Size Gong Ins.	Frame No.	Resistance Ohms	List Price Each
4	1	1.5	\$7.09
5	2	2.1	9.54
6	2	2.1	10.20
7	3	3	14.36
8	3	3	21.58
10	4	5.2	25.24
12	X-5	5.2	50.46
14	X-5	5.2	50.46

Faraday Gongs shown above will be furnished, when specially ordered, wound to special resistance to operate direct in multiple or series if specified without external resistance, on 110 or 220-volt D. C. circuits; for 600-volt D. C. circuits, they will be wound to a resistance of 1000 ohms, and should be used with special Faraday External Resistance, as shown in blue print attached to each gong sent out or will be wound to 150 ohms for use in the old-fashioned way with bank of 5 lamps.

Faraday single-stroke gong shown on this page will not give satisfactory service on alternating current, and Faraday Electro-Mechanical Gongs or Faraday A. C. Relay Outfits, as shown on other pages, must be used for A. C. single-stroke work.

Special resistance gongs made to order. For prices see special listing elsewhere.

UNDER-DOME FARADAY GONGS NATIONAL CODE STANDARD

Model DB
Regular Pattern

Mechanism of Under-Dome Bell

Model DBC
For Exposed Conduit Work

Under-Dome Faraday Gong

These gongs are far superior to projecting-neck type of signal-gong heretofore almost universally used. The entire mechanism of an Under-Dome Gong, including hammer rod and ball, are within the gong, completely housed and protected; nothing can possibly injure or derange the mechanism and, in addition, the design of the Under-Dome Faraday Gong lends itself to the requirements of building work, i.e., that the gong shall not in any way mar the general building lines.

The clean, graceful lines of the design harmonize with surrounding interiors to a degree that was never possible in the old-style projecting-neck type of gong.

Under-Dome Faraday Gongs are regularly furnished in bauer-barff all over, i.e., gong and base; when specially ordered, will be furnished at slight additional cost, in any color to match walls or decorations.

Under-Dome Faraday Gongs have the following advantages in mechanism, viz.:

(a) Patented "High-Power" armature allows the keeping of armature in magnetic field up to the moment of striking the gong—twice the power of any other mechanism made, because contact points do not open or cut off current till the end of stroke.

(b) Bronze-steel power-multiplying gears between armature and hammer rod.

(c) No springs can break to stop operation of gong.

(d) Frame-casting of bell carries no current at any time, as entire electrical mechanism is insulated.

Faraday Bells may be mounted on metal without fear of grounding.

Under-Dome Faraday Gongs are made in three (3) models, viz.:

"DB"—for surface-mounting without conduit.

"DBC"—with outlet box for surface-mounting with conduit.

"DBFC"—with outlet box for flush-mounting with conduit.

Under-Dome Faraday Gongs will operate only on D. C. circuits; they will be furnished to work without external resistance on 110 volt D. C. circuits, wound to 1750 ohms; for 120 volts D. C. circuit, they will be furnished wound to 2500 ohms. For operation on 600-volt circuits, they will be furnished wound to a resistance of 1000 ohms; for this 600-volt service best results will be obtained from use in connection with special external Faraday Resistance-panel, or will be wound to 150 ohms for use in the old-fashioned way with bank of five (5) lamps. Connections must invariably be made exactly as per diagram sent out with 600-volt bells and when directions are followed, absolutely satisfactory results will be obtained with practically no sparking at contacts of bell.

Under-Dome Faraday Gongs will not work on A. C. circuits; Faraday Double-gongs, listed on other pages, must be used for A. C. circuits.

Under-Dome Faraday Gongs will be furnished "Single-stroke," when specially ordered, at \$0.50 net per bell additional.

PRICE LIST **MODEL DB—FOR REGULAR WORK**

NOTE: Under-Dome Faraday Bells are ideal for electric vehicle work; will be furnished wound to any resistance required; generally used for 88 volts.

SPECIAL RESISTANCE FARADAY BELLS

For Direct Current Circuits Only

The tables shown herewith give the amounts that are to be added to the list prices of standard resistance for special resistance Faraday Skeleton and Enclosed Type Bells and Buzzers; for data, see paragraph "Ohms Resistance for various D.C. voltages" below.

SPECIAL RESISTANCE WINDING LIST ADDITIONS

Ohms per Bell	Frame No. 00-0-1	Frame No. 2	Frame Nos. 3-4-X5 & 6
5 to 10	\$0.60	\$0.96	\$1.20
11 to 20	.72	1.44	1.68
21 to 50	1.08	1.68	2.04
51 to 100	1.44	1.92	2.40
101 to 150	1.68	2.28	2.76
151 to 200	1.92	2.64	3.12
201 to 250	2.16	3.38	3.84
251 to 300	2.40	4.32	4.80
301 to 350	2.88	5.28	5.76
351 to 400	3.38	6.24	6.72
401 to 450	4.32	6.72	7.20
451 to 500	4.80	7.20	8.16
501 to 1000	5.28	7.80	9.00
1001 to 2000	6.00	8.70	10.20

Ohms Resistance for Various D. C. Voltages

For A.C., See Last Paragraph Below

Ohms Resistance per Bell	Adapted to Operate on Voltage of	Ohms Resistance per Bell	Adapted to Operate on Voltage of
5 ohms	6-10 volts	300 ohms	55-65 volts
10 ohms	10-15 volts	350 ohms	65-80 volts
20 ohms	15-20 volts	400 ohms	80-95 volts
50 ohms	20-25 volts	450 ohms	95-105 volts
100 ohms	25-30 volts	500 ohms	105-110 volts
150 ohms	30-35 volts	550 ohms	110-120 volts
200 ohms	35-45 volts	1000 ohms	120-130 volts
250 ohms	45-55 volts	2000 ohms	220-240 volts

NOTE: Above data is approximate, and may be varied from, in actual practice, without bad results; for example, a 20 ohm bell will operate O.K. on a 30 volt circuit, but as on this voltage there will be more sparking at contact points, best results would be obtained with a 100 ohm bell as shown in table.

NOTE: For high voltage gongs (from 60 to 220 volts) we can furnish Faraday Spark Eliminators, when specially ordered, at an extra price of \$1.00 Net per gong. When spark eliminators are used lower resistance than those shown in above tables may be used for high voltage circuits.

Faraday Gongs will be furnished, when ordered, wound to special resistance to operate direct in multiple without external resistance, on 110 or 220 volt D.C. circuits. For 600 volt D.C. circuits, they will be wound to a resistance of 1000 ohms and should be used with special Faraday External Resistance, as shown in blue print attached to each gong sent out; or will be wound to 150 ohms for use in the old-fashioned way with bank of 5 lamps.

Faraday Gongs up to 6 inch, inclusive, will, when wound to proper resistance (500-1000 ohms for 100-125 volts D.C. and 106 ohms for 100-115 volts A.C., 60 cycle), operate on D.C. and A.C. circuits. Above 6 inch single gong bells will not give satisfactory service on A.C. and Faraday Double Gong Bells must be used.

Model "DG"
Double-Gong Bell

Mechanism, Model "DG"
Double-Gong Bell

A. C. Double-Gong Faraday Enclosed-Type Bells

These bells are designed for five different A. C. service conditions. All five types on this page are designed to be connected direct in multiple on line without external resistance of any sort; but there are two distinctly different types of bells, viz.: Multiple-Type and Series-Type.

Multiple-Type Gongs for 100 to 220 volt A. C. circuits should always be connected in multiple, like an incandescent lamp is connected to circuit. Multiple-Type Gongs must never be connected in series.

Series-Type Gongs, while requiring no external resistance, may be connected either in multiple or in series—the latter being particularly advantageous, however, under some conditions when lines are long and size copper small; the Series-Type Gong, in operation, never opens the circuit, minimizing sparking at contacts, etc.; the operation of any one or more gongs in the series may be stopped without interfering with the working of other gongs in circuit.

Faraday Double-Gong Bells listed on this page are entirely different from any A. C. gongs on the market, because of the new patented quick-break pole-reversing commutator device, which automatically reverses the pull on the armature at extreme position, and keeps pull on the armature till it is up against the core; all other double-gong bells reverse the current when armature is in the middle position, causing the magnets to pull the armature in the opposite direction before the end of the stroke.

NOTE: Double-Gong Bells, above described, will be wound to any desired special resistance for use on D. C. circuits. For list prices for such winding, see special listing elsewhere, being careful to note that double-gong bells always have to be wound to maximum resistance per coil, not per pair as single-gong bells; therefore, list prices of double the resistance of single-gong bells must be figured. For example, a single-gong bell to operate without excessive sparking on a given D. C. voltage might be wound to 500 ohms, but a double-gong for same use 500 ohms per coil or 1000 ohms per pair.

Don't fail to specify which of five types is required and voltage in addition to "List No." and "Model No." otherwise order cannot be filled.

When Series type gongs are required order must state: (a) How many gongs are to be connected in each series. (b) Voltage of circuit. (c) Length of line (both legs) and size of wire.

FARADAY DOUBLE-GONG BELLS

Model DGM
Double-Gong Mine Bell

Model ME
Loud-Ringing Extension Bell

A.C. Non-Sparking Mine Type Faraday Double-Gong Bells

FOR A.C. ELECTRIC LIGHT AND POWER CIRCUITS

100-220 Volts—25-60 Cycles

A.C. Non-sparking Faraday Double-Gong Bells are designed to operate direct on line without external resistance of any kind and without sparking. There are no contacts of any sort in the mechanism of this bell. In mine work and, in fact, in many places where a spark at contact points is dangerous or objectionable, these Faraday DGM Bells are extremely advantageous.

Loud-Ringing Magneto-Extension Faraday Double-Gong Bells

FOR A.C. MAGNETO-GENERATOR CIRCUITS

Are for use on telephone lines or on circuits where the source of current supply is an A.C. Magneto Generator of 16 $\frac{2}{3}$ cycles.

Model ME bells are of polarized type with permanent magnets—entirely different in principle from the standard double-gong bell.

These Model ME bells are made only in three sizes: 6 inches, 8 inches and 10 inches.

Operation of Faraday Magneto-Extension Bells is under certain line conditions improved by the use of condensers.

All Model ME Faraday Gongs are weatherproof, with rubber-gasketed covers and no external binding-posts; they may be mounted outside without additional housings.

ELECTRO-MECHANICAL FARADAY GONGS

Mechanism, Model EMW

Outlet Box for
Pipe Entrance

Model EMW

For Open or Closed Circuit Systems

Electro-mechanical Gong are made for use where requirements demand a heavier and more powerful blow than is possible to obtain from an electric signal gong of regular design.

In an Electro-mechanical Gong the blow on the gong is struck by a heavy ball on the end of a lever released by the electric current, but operated by a powerful clock-spring.

The mechanism of the Faraday Electro-mechanical Gong is an extremely high-grade product, and rarely does the same fail to draw strong praise when examined in detail by signal-engineers who know their business.

Faraday Electro-mechanical Gongs are designed to give the proper prearranged signal at all times and have not a single failure in their whole history—a strong claim, but one that's positively backed up and proven by actual records.

Cases are designed for the easy, comfortable installation, that has always, in other makes, been entirely lacking; the back of the case is in reality an outlet-box, in which box all terminals are mounted; when the mechanism of the gong itself is to be put up, it's an easy, convenient operation.

Front may be taken completely off for inspection of mechanism, contacts, oiling of bearings, etc.—all without disturbing mechanism; the entire mechanism may also be removed from the case without opening circuit, if so desired.

Cases are of cast-iron, finely japanned; heavy soft-rubber gaskets guard against dampness getting into the case; cases are regularly drilled to "slip" $\frac{1}{2}$ inch rigid iron conduit, but entrances are plugged and provision made for wires entering from "open-work" type of wiring; when specially ordered, will be drilled to "slip" any size conduit desired.

"Tell-Tale" attachment furnished when specially ordered at \$6.00 per bell extra; with "Tell-Tale" attachment, notification is insured whenever spring of the movement needs rewinding.

Faraday Electro-mechanical Gongs will give approximately 500 blows to each winding.

The following types of mechanism are made and orders cannot be filled unless type is specified:

- Single-stroke, for open-circuit work.
- Single-stroke, for closed-circuit work.
- Continuous-ringing, for open-circuit work.
- Continuous-ringing for closed-circuit work.
- To ring continuously until run down, for open-circuit work.
- To ring continuously until run down, for closed-circuit work.

Electrical House Goods and Novelties

TOY TRANSFORMERS

No. 1 Toy with Switch

No. 1 Connection

No. 2 Connection

No. 3 Connection

"Jefferson" Flexible Toy Transformers

The Jefferson Flexible Toy Transformers reduce the ordinary A.C. house lighting current to low voltage suitable for operating and regulating the speed of electric engines, small motors and electric trains; may be also used for ringing bells, signals, buzzers, lighting small lamps, etc. In fact, the different uses they may be put to are unlimited.

These toy transformers are mounted in handsome black enameled steel cases, equipped with extension cord and attachment plug, so that they can be attached to any alternating current lamp socket. They are sturdily built and make a very handsome appearance. With ordinary care will last a lifetime.

Standard stock transformers are wound to operate on 100 to 130 volts, 60 to 133 cycles. Transformers of special voltage or cycle furnished to order. No extra charge for 25 cycle or 220 volt, 60 cycle.

Transformer With Switch

50 and 100-Watt Transformer

Wayne Toy Transformer

The Wayne Toy Transformer is a medium through which electricity at low voltage may be obtained from an alternating current lighting circuit for operation of electrical toys, such as railways, locomotives, aeroplanes, automobiles, motors or any electrical toys which may be operated from alternating current.

On account of the numerous sizes and types of toys it is necessary to have a wide variation in secondary voltage because the smaller toys take from 4 to 10 volts and the larger toys from 10 to 24 volts.

On these transformers the variation in voltage is accomplished by means of three terminals and a switch with a number of contacts. The different voltages are thus made available with only one change in the secondary connections.

This flexibility of the voltage control not only permits of the operation of practically all of the various electrical toys but permits operating them at variable speeds.

CONSTRUCTION

The same care and workmanship is given to the Wayne Toy Transformers as if found in large power transformers, particular attention being given to insulation.

The transformer core is built up of steel laminations of the best quality Silicon steel. The transformer proper is then mounted in a sheet steel case with a black fiber cover. The case is completely filled with insulating compound. This compound makes the transformer impervious to moisture and practically indestructible.

List No.	Type	Form	Frequency	Watts	Volts Primary	Volts Secondary	List Price

BELL RINGING TRANSFORMERS

No. 190546

No. 190552

Bell Ringing Transformers

Transformer No. 190546 is a small, self-contained, tamper-proof, indestructible device made especially for service in residences, flats, etc., for operating the door bells, annunciators, burglar alarms and door openers. It is to be connected to the house lighting circuit of 60 cycles, 110 volts, alternating current, and gives 12 volts across the binding posts for the bell circuit.

It will ring three 4 inch bells connected in multiple; when a 6 inch bell is to be operated two of these transformers should be used, their primaries connected in multiple across the lighting circuit and the secondaries connected in series to supply the current for the bell. With two transformers connected in this manner three 6 inch bells can be operated at one time.

The No. 190552 is designed especially for service in connection with the larger bells used in factories, public buildings, etc., which require more energy to ring them than is furnished by the transformer previously described.

It has a capacity of five 5 to 7 inch bells, or ten 2 to 4 inch transformer bells, the bells to be connected in multiple across the secondary circuit.

The No. 99192 is in construction and outward appearance similar to Transformer No. 190552, but has a capacity of three 10 to 12 inch bells, five 8 inch bells, ten 5 to 7 inch bells, or twenty 2 to 4 inch transformer bells, the bells to be connected in multiple across the secondary circuit.

The above are built to conform to the requirements of the Underwriters and bear their approval.

List Prices and Data

List No.	Primary	Voltage Secondary	Watts	Frequency	Height Inches	Width Inches	Depth Inches	Weight Lbs.	**List Price Each
190546	110	12	10	25 to 140	6½ in.	3½ in.	2½ in.	4½	\$2.80

Junior

Type B

Bell Ringing Transformers

The "Junior" bell ringer is suitable for residence door bells, buzzers and all classes of light signal work. For heavier signal work and bells that require more power than is generated by the "Junior," we recommend either type "A" or "B." For extra heavy signal work, we recommend the heavy output "A" or "B."

TOY TRANSFORMERS

Without Circuit Breaker

With Circuit Breaker

Thordarson Toy Transformers

In toy transformer operation short circuits occur continually, due to the ignorance of the operator, bridging of the tracks when toy trains are derailed and many other causes over which the manufacturer has no control.

These transformers have, therefore, been provided with a device effectively protecting the transformer itself from operating abuse, consequently minimizing repair expense.

This device, to be absolute in its operation, must essentially be a part of the transformer, and to protect it from other causes of derangement must be inherent in the transformer itself. Therefore, there has been placed within the transformer case its protective device. When the transformer is overloaded from whatever cause—either short circuits or unintentional overloads—this device automatically opens the transformer circuits, cutting same out of service. By means of a push button protruding through the side of the case the transformer can be readily replaced in service after short-circuit condition has been removed, and then only, it being impossible to close the circuit until overload condition is removed. This feature is particularly important where the transformers are operated by children. In order that the secondary voltage can be varied in steps of one volt from the minimum to the maximum range of the transformer, there is provided a regulating switch and universal connection terminal placed upon the top of the transformer where the operator can easily read the directions and operate the regulator lever conveniently with no chance of making a mistake.

List No.	Watts	Range of Voltages	List Price with Circuit Breaker	List Price without Circuit Breaker
1-B Transformer	60	1 to 20	\$9.36	\$7.36
2-B Transformer	120	1 to 25	11.36	10.00
5-B Transformer	40	1 to 15	7.36	5.36

Sign Lighting Transformers

The multiple lighting transformers are designed to be used in connection with low voltage Mazda lamps, either for sign or residence lighting. These transformers embody all essentials of a perfect design, electrical, magnetic and mechanical. They are double wound and insulated to withstand a breakdown of 2500 volts between the primary, secondary and core. Standard transformers can be furnished for two and three wire systems, 110 and 220 volt primaries, 11 and 22 volt secondaries.

PUSH BUTTONS

No. 1375

No. 1386

No. 1382

Watertight Push Button

This push button is for use in boats, ice houses, cold storage plants, mines, or any place where the atmosphere is continuously damp. A watertight pigskin cap is held in place over the push center by a threaded ring. The base is solid bronze with two cast lugs projecting, through which connecting wires pass.

List No.	Mfr. No.	Diameter	†List Price Each
360794	*1375	2½ in. With platinum contacts	\$1.84
360795	*1376	2½ in. Without platinum contacts	1.80

Prices include any finish from Nos. 1 to 11 inclusive.

Improved Watertight Push Button

Navy Standard

This push button has heavy German silver springs with platinum contacts. Screw cap, rubber gaskets under the base and between the base and screw cap. Hard rubber back. Push center covered by pigskin, which is held in place by rim and four screws.

360796	1386	2½ in. Improved Watertight Push Button	\$2.00
--------	------	--	--------

Non-Watertight Push Button

Navy Standard

This push button has heavy platinum contacts; screw cap.

MISCELLANEOUS PUSH BUTTONS

No. 190

No. 191

No. 71

Edwards Directory Push

No. 190 or 191

Schedule "R"

The Edwards Directory Push is equipped with unusually substantial connectors with formed ears to prevent the wire from spreading or slipping out. The button head screws have lower ends upset so that they cannot be backed out or lost. These screws make connections easy and most secure. Phosphor bronze, scraping, self-cleaning contacts, allow pleasant uniform push. The contact bridge and all current carrying parts are fully insulated from the front plate, making push available for use on metal if desired, without fear of grounding. The spaces for name cards are liberal in size; any single card may be inserted or removed without dismounting block or disturbing the others. The buttons ordinarily are supplied in black, but pearl buttons can be furnished if desired. A large metal eyelet is provided in end of block to facilitate the introduction and protection of cable. Type No. 191 is for flush mounting directly on desk or wall. The wood block of the No. 190 is weighted so it may be used as a paper weight.

No. 60 or 61
Sectional View on Plaster Wall

No. 60 or 61
Complete

No. 60 or 61
Escutcheon and Plate

No. 60 Flush Push Escutcheon

Schedule "E"

This is an exceptionally neat fitting for a midget push on plaster or where larger push than the midget is required. The iron plate is secured to the wall first; there being a number of screw holes it is always possible to have the screw engage a lath; the brass top is placed over the iron plate and a midget or midget junior button is then slipped into the hole and pressed tight. The spring clips on the side of button grips the iron plate and holds the button and brass plate securely in place.

List No.	Mfr. No.	Style	Fits Hole Inches	Std. Pkg.	*List Price
360394	60	Escutcheon Metal	$\frac{5}{8}$ inch	12	\$0.17
360395	61	Escutcheon Metal	$\frac{3}{4}$ inch	12	.17

Finish: **Nickel plate**, brush brass, old brass or bronze.

For any finish in group A as listed on previous page add \$0.11. For any finish in group B add \$0.27.

*Delivery F. O. B. Factory, New York City. For warehouse deliveries write nearest house.

MISCELLANEOUS SWITCHES

Door Switches

Fit Standard Switch Boxes
GENERAL DESCRIPTION

Eco and Lungen Door Switches are designed to automatically light and extinguish electric lamps by the opening or closing of a door. They are used in telephone booths, bank vaults, closets, dressing-rooms, etc. Attention is called to the compactness of the switches; the springs and contacts are phosphor bronze; all types are guaranteed mechanically and electrically perfect. Finish, brass, unless otherwise specified. Add for group A finish, 44 cents. Group B finish, 81 cents.

No. 174

ECO NO. 174

TELEGRAPH APPARATUS

No. 103 With Legs

No. 108 Legless

Steel Lever Keys

The lever and trunnion is made of one piece of fine wrought steel, polished and nickel plated, giving a perfect bearing and avoiding the loose trunnion trouble so common in other types. All other metal parts finely finished and lacquered.

Each key is fitted with improved adjustment spring holder.

Both knobs are of hard composition rubber.

The durability, lightness and quick action of the steel lever pattern are recognized by experts and operators. The Postal and Western Union Telegraph Companies have adopted this type as their standard.

List No.	Mfr. No.		*List Price Each
360539	103	Key, with nickel-plated lever, brass frame, with legs.....	\$1.86

TELEGRAPH APPARATUS

No. 101 Reliable Telegraph Key

No. 143 Reliable Telegraph Sounder

Reliable Key and Sounder

The Reliable Key and Sounder shown is the "Eureka" type of instruments mounted on separate bases. Under some conditions this arrangement of key and sounder is preferable to the single base, because of limited space or a desire to place the sounder at some convenient location.

The steel key lever is nickel plated and polished. The sounder lever, sounder yoke or anvil, adjusting screws, etc., are finely finished composition metal, such as is used in all high-grade instruments. The sounder base is japanned and striped with gilt.

Key knob and circuit closer knob are of polished hard rubber composition.

Two extra binding posts are mounted on the key base for convenience in making electrical connections.

List No.	Mfr. No.		*List Price Each
360548	101	Reliable Telegraph Key	\$1.20
360549	143	Reliable Telegraph Sounder, 5 ohms	1.70
360550	144	Reliable Telegraph Sounder, 20 ohms	1.96

No. 178 Eureka Type

No. 180 Excelsior Type

Eureka Learner's Instrument

The Eureka Instrument is a first-class, standard size telegraph set. All of the working parts—which includes key lever, sounder lever, sounder yoke or anvil, adjusting screws, etc.—are finely finished composition metal, such as is used in all high-grade instruments. Sounder base is japanned, striped with gilt. The base is mahogany and highly polished. The key is of the steel lever pattern, and sounder gives a loud, clear and distinct sound.

Key knob and circuit closer knob are of polished hard rubber composition.

This instrument will operate on a single standard dry cell. But key must be left open when not in use.

List No.	Mfr. No.		*List Price Each
360551	178	Eureka Telegraph Instrument, 5 ohms	\$2.20
360552	179	Eureka Telegraph Instrument, 20 ohms	2.46

Excelsior Learner's Instrument

The Excelsior Learner's Instrument is designed to fulfill all the requirements of a short line apparatus at the least possible cost.

The sounder magnets, lever, anvil and key lever are the same as used on the Eureka outfit.

The frames for holding sounder lever and key lever are stamped from wrought iron and heavily japanned. This method of assembling insures permanent adjustment of the side motion of both key and sounder lever as there are no screws to become loose.

The base is mahogany finish highly polished.

This is a neat and compact learner's instrument and will give entire satisfaction on lines up to five miles in length.

List No.	Mfr. No.		*List Price Each
360553	180	Excelsior Telegraph Instrument, 5 ohms	\$1.96
360554	181	Excelsior Telegraph Instrument, 20 ohms	2.22

A copy of "Philosophy and Practice of Morse Telegraphy" is furnished gratis with each set.

*Delivery F. O. B. Factory, New York City. For warehouse deliveries, write nearest house.

TELEGRAPH APPARATUS

No. 122
20th Century Type

No. 230
Barclay Box Type

20th Century Relay

This is a high-grade instrument. Every telegrapher realizes the advantage of quick adjustment of magnets when there is heavy "escape" on the line. With the 20th Century Relay the magnets can be moved back by simply pulling on the magnet adjusting screw, and if found necessary to keep them away from the armature, a few turns of the adjusting screw will hold them firmly in place.

Every part of the relay is most carefully constructed and assembled, and the best selected materials are used.

List No.	Mfr. No.		*List Price Each
360571	122	20th Century Relay, 150 ohms.....	\$8.50

TELEGRAPH APPARATUS

No. 135
Main Line Sounder with Key

No. 136
Main Line Sounder Only

No. 111
Improved Giant Sounder

Main Line Sounders

This sounder is recommended for wrecking, testing, switchboard or temporary office use, and all places where it is desirable to dispense with local batteries.

They are made with full size relay magnets of 150 ohms resistance having a special armature adjustment and are fully suited for doing in a greatly improved manner the work of regular main line box relays. They are sensitive to weak currents, giving a clear working sound on currents where, without them, a relay with local sounder and battery would be absolutely necessary.

Main Line Sounder With Key

List No.	Mfr. No.		*List Price Each

Western Union Pin Switchboard

With Plate Lightning Arrester

These switches are now regarded as a standard article, having been generally adopted by the Western Union Telegraph Company, the Postal Telegraph Company, as well as by many other corporations having extensive systems of wires.

In ordering for large offices it will only be necessary to give the number and changes of wires, loops, batteries and instruments to be provided for.

List No.	Mfr. No.			*List Price

List No.	Mfr. No.		*List Price Each
360721	1653	Automatic Thermostat	\$0.60

Adjustable Thermostat

This instrument can be set for any desired degree of temperature, and will make electrical contact on the rise or fall of temperature. Call bells, or other electrical alarms, can be connected in the circuit at any desired distance from the thermostat.

Often used for fire alarm, in hothouses, incubators, etc.

List No.	Mfr. No.		*List Price Each
360722	1673	Adjustable Thermostat	\$1.50

Miniature Battery Rheostat

Suitable for regulating the voltage of battery circuits in connection with miniature lamps, small motors, etc.

Maximum resistance is 10 ohms.

The change from 0 to 10 ohms is gradual, as the lever passes over the coiled resistance wire. When resting on "off" the circuit is open. In any other position the circuit is closed.

Binding posts and lever nickel plated. Furnished with porcelain base. Diameter, 3 7/8 inches.

Experimentalists, physicians, surgeons, workers in laboratories, etc., will find this a very useful and efficient miniature rheostat.

MESCO CONNECTORS

No. 6536

No. 6535

Small Rectangular Connector

These connectors are very convenient for making and breaking a circuit rapidly and as frequently as desired.

This small size can be used on any battery circuit and its performance will always be satisfactory, as the contact parts are molded under heavy pressure in a solid block of hard composition which will hold them permanently in place.

List No.	Mfr. No.		Size	*List Price Each
361205	6536	Small Rectangular Connector.....	$1\frac{1}{8} \times \frac{1}{4} \times \frac{1}{8}$ ins.	\$0.50

Medium Rectangular Connector

This connector will make and break a circuit for any apparatus or lights using 15 amperes or less of current.

For connecting portables, fans, small motors, etc., it will be found very convenient, its simplicity recommending it for such purposes.

It is provided with two eye screws, one at each end, which can be used for anchoring the cord, should it be deemed advisable to do so. Can also be looped together by this means, so that when separated the two parts being close together can be located and connected without delay.

List No.	Mfr. No.		Size	*List Price Each

No. 6540

No. 6534

Large Rectangular Connector With One Hole

This connector can be used with safety for making and breaking 25 amperes on 125 volt circuits.

For experimental and demonstrative purposes.

For stage lighting, connecting motors and numerous other applications it will prove a reliable, quick-acting circuit controller.

A hole is provided in the larger part of the connector for tying the conducting cord, which eliminates all strain on the binding screws. The contact receptacles and plugs are separated by one inch of hard rubber composition, which makes a perfect insulation between the current carrying parts.

List No.	Mfr. No.		Size	*List Price Each
361209	6540	Large Rectangular Connector.....	$2\frac{1}{2} \times 1\frac{1}{8} \times \frac{3}{4}$ in.	\$0.76
361210	6539	Plug only.....		.38
361211	6543	Receptacle only.....		.38

Rectangular Connector

This connector is very convenient for connections which have to be made and unmade frequently and rapidly. It is similar to No. 6540, but slightly smaller and is made without a tie holder.

It is made in accordance with the Underwriters' requirements and will safely carry 25 amperes on 125-volt circuits.

List No.	Mfr. No.		Size	*List Price Each

MEDICAL BATTERIES

No. 2233

No. 2233

The Apollo Medical Battery

This is a two cell medical battery and is recommended where more current is desired than can be obtained from the single cell type.

It is furnished in highly polished oak or mahogany case. All metal parts finished in polished nickel. Dimensions 9 x 7 1/4 x 8 inches high. Furnished with two metal hand electrodes, two sponge electrodes, one foot plate electrode, one massage roller electrode, one hair brush electrode, two wooden electrode handles and one pair of green and red silk conducting cords.

It has battery and pole changing switches, three binding posts for inserting the cord tips. Induction coil arranged with graduated scale.

All metal parts heavily nickel plated and highly polished.

The above left-hand illustration shows the cover raised, exposing the coil, etc.

The right-hand illustration shows the electrodes arranged in the compartment in which they should be kept when not being used.

An Electropathic Guide with each apparatus, giving full directions for using the electrodes, care of battery, etc.

Western Electric

Electric Massage Vibrators

No. 2236

Massage Vibrator

FOR D. C. AND A. C. CIRCUITS

This vibrator is made to operate on direct currents of from 100 to 120 volts and on alternating currents of 60 cycles 100 to 120 volts.

Also made to operate on 220 volt direct current circuits and 220 volt alternating current circuits 60 cycles.

It is not adapted for use on alternating currents of frequencies higher than 60 cycles.

The vibrator is handsomely finished in black enamel and polished nickel. A switch in the lower part of the handle under immediate control of the operator turns the current on or off at will. Practically noiseless and with a minimum vibration in the handle.

Furnished with six feet of flexible conducting cord and Separable Attachment Plug which will fit into any ordinary lamp socket.

Enclosed in a leather-covered, plush-lined carrying case, with leather handle and nickel-plated trimmings. Dimensions, $9\frac{1}{4} \times 8\frac{3}{4} \times 4\frac{1}{4}$ inches.

Five applicators are supplied with each outfit: Cup, ball, hard toothed, soft toothed and rubber sponge.

List No.		*List Price

Western Electric

One Cell Lantern

Method of Lighting Lantern

Method of Removing Bulb

Two Cell Lantern

Dry Battery Lantern

The Western Electric Dry Battery Lantern is intended for use in all places where an ordinary oil lamp is used. Its cleanliness and the strong white light which cannot blow out appeal to all classes of buyers. It may be used in perfect safety in mines, factories and other places where there are highly explosive materials or gases.

Two very important points were kept in mind when this lantern was designed. First, to get as much light as possible from an ordinary $2\frac{1}{2} \times 6$ inch dry battery. Second, to get the maximum life from the battery.

The Reflector is a true parabola like those used in automobile headlights, and is 4 inches in diameter. The metal is brass and is heavily plated with white nickel plate. With this highly efficient reflector, the lantern will throw a penetrating beam of light 250 feet.

Bulbs. The lamp bulbs cannot work loose because they have bayonet bases like automobile headlight bulbs. They are rated at .5 amperes. This low current consumption gives long battery life. The bulbs are tipless, and therefore do not cast shadows.

The Switch, socket and reflector are all combined into one unit. By turning the reflector to the right the lamp bulb is moved so that the terminals on the base of the lamp come in contact with the plungers in the Edison socket. This closes the circuit and causes the lamp to light. Turning the reflector to the left moves the lamp bulb terminals away from the contacts in the socket and opens the circuit. No current is lost through high resistance contacts. When the light is turned on the contacts with the lamp base are made under heavy pressure. This pressure reduces the resistance. Each time the switch is operated the contacts are wiped or scraped; this keeps them bright and clean—dirty contacts increase the resistance. All levers or buttons outside of the lantern are eliminated, making the case weatherproof. It also prevents the possibility of the light being turned on accidentally.

Construction. The containing case is of heavy metal, finished with two coats of genuine automobile lamp enamel; not ordinary japan finish. This will stand years of service and will protect the metal beneath.

Handles. Two handles are provided. One is riveted to the back of the lantern and has a hole punched in it so that the lantern can be hung on a nail. A ball is also provided, which enables you to carry the lamp the same as you would any ordinary oil lantern.

The Two Cell Lantern is of the same general design as the single cell type, except the case is arranged for two batteries. These are connected in series. The two cell lantern gives considerably more light than the one cell size, but the life of the batteries will be about the same for both lanterns.

Battery. Any No. 6 standard dry battery with either flush or protruding carbon terminals may be used, but we recommend the Western Electric Red Label Blue Bell battery. The life of the battery will depend upon how often the lantern is used. For ordinary service it should last two or three months.

Terminals. The terminals are of heavy insulated wire and are anchored so that they cannot pull out. Copper connectors are on the ends of the terminals. If the lantern is to be used with a battery having Fahnestock connectors, simply clip off the terminals, bare the ends of the wires and fasten the wires in the clips of the Fahnestock connectors.

EVEREADY TUBULAR FLASHLIGHTS

Tubular Flashlights are used extensively by inspectors and others whose work is in places where a strong steady illumination is needed. The switch for turning the light on or off is by the same hand that carries the flashlight.

These flashlights are equipped with two types of switches, the slide switch and the spring switch.

The slide switch is controlled by a pressure of the thumb in either direction. To turn the light on the slide is gently pressed forward; to extinguish the light the slide is pressed backward to its original position. The spring switch is located at the lower end of the flashlight. The light can be flashed on or off quickly by pressing the metal tongue against the cap.

These lights are extremely compact, the entire case being but a little larger than the battery it contains.

Nickel Plated Tungsten Flashlights
Flash and Permanent Contact

The tungsten battery has made it possible to produce practical flashlights that are actually vest pocket size. The smallest, known as the "Midget," is so tiny that it can be carried in a lady's purse. Equipped with Eveready Tungsten Batteries and Eveready Mazda Lamps they give a surprisingly powerful white light, and the battery, with average use, will usually last from two to four months.

Cases sturdily made and beautifully finished in polished nickel. Sliding contact and button for flash or continuous light.

"Fountainlight" Flashlight

The "Fountainlight" Flashlight is an exact imitation of a fountain pen with barrel, cap and clip, which creates a new and novel departure from the ordinary type of flashlight. Its dimensions are such that it becomes a veritable vest pocket flashlight, causing no inconvenience whatever in carriage. "For light" press the ball of the clip—there will be no hitch. "For no light" carry the "Fountainlight" like a fountain pen in the pocket with the cloth of the pocket between the clip and casing. Contact is then impossible, the cloth acting as an insulator, thus preventing to a certainty the useless consumption of the battery in the pocket.

Nickel Plated Tungsten Flashlights

VEST POCKET TYPE

This type flashlight opens exactly like a cigarette case. The beauty of design as well as convenience and ease of replacing the battery and lamp are plainly shown in the cut above.

When a fresh battery is inserted it is instantly apparent whether the battery terminals are in the right position to make contact with the lamp and sliding switch, saving time and trouble.

Notice the thin and neat appearance and the rounded corners without projections to wear the pocket. The same batteries and lamps are used in this new design as in the other styles of nickel plated vest pocket flashlights shown in the preceding page and the sizes are practically the same.

Nickel Plated Tubular Tungsten Flashlights

The cases are made entirely of brass, heavily nickel plated, which especially adapts them for use around motor cars, motor boats, or wherever the hands of the user are likely to be oily or wet. These cases should last indefinitely under almost any conceivable conditions. They are thoroughly insulated and there is no possibility of short-circuiting the battery through contact with other metal objects.

Vest and Coat Pocket Tungsten Flashlights

These flashlights throw a powerful light for a considerable distance. The light is instantly available and absolutely safe. They can be used around the automobile and gasoline tank where a match would be dangerous and might cause an explosion.

The vest and coat pocket flashlights are equipped with a slide switch similar to that used on the tubular flashlights—one hand holds the flashlight and operates the slide. When required, the flashlight may be laid down, leaving both hands free.

Pistol Light

This is a perfect copy of an automatic magazine pistol of the latest type. When the trigger is pressed, instead of a destructive bullet, a bright beam of light leaps from the muzzle and continues as long as the pressure lasts. Fits the pocket like a "gun." Strongly made of brass and furnished in gunmetal finish. Makes an instant appeal to those who wish to combine novelty with utility.

List No.	List Price
2675 Pistol Light, complete.	\$2.00
750 Renewal Tungsten battery	.40
1180 Renewal Mazda bulb, 2.5 volts.	.20

Tungsten Gas and Range Lighters

The Gas Lighter has a socket which is used to turn on the gas if the fixture is high. The same hand that turns on the gas presses the switch that operates the lighter. When this switch is pressed a current is projected through the platinum coil, contained in the perforated tip of the lighter. This coil instantly becomes white hot and stays in that condition as long as the switch is held down. No draught can blow it out. The shape and length of these lighters make them invaluable where the Welsbach type of burner is used.

The Range Lighter operates in the same way, but there is a difference in design. The hand is far from the flame when it ignites, preventing burned fingers.

Battery case of vulcanized fibre. All metal parts nickel plated.

Locomotive No. 33

Locomotive No. 38

Locomotive No. 53

Electric Type Locomotives

Outfit No. 33. Consists of one No. 33 Locomotive, 11 inches long, and 8 sections of curved track, making circle $3\frac{1}{2}$ feet in diameter. Operates on 4 or 5 dry batteries, or reduced house lighting current.

List No. Mfr. No. *List Price
 361641 33 Outfit complete. \$10.50

Outfit No. 38. Consists of one No. 38 Locomotive, 12 inches long, and 8 sections curved track, making circle $3\frac{1}{2}$ feet in diameter. Locomotive has four large driving wheels and is equipped with controller. Operates on 4 or 5 dry batteries, or reduced house lighting current.

361524 38 Outfit complete. \$12.76

Outfit No. 53. Consists of one No. 53 Locomotive, 12 inches long, 8 curved and 4 straight sections of track, measuring $15\frac{1}{2}$ feet. Locomotive has two sets of four driving wheels and is equipped with controller and contact for interior illumination of passenger cars. Operates on 5 or 6 dry batteries, or reduced house lighting current.

361525 53 Outfit complete. \$15.00

Locomotive No. 42

Outfit No. 51

Electric Type Locomotives

Outfit No. 42. The largest of the Electric Type Locomotives. Outfit consists of one No. 42 Locomotive, $15\frac{1}{2}$ inches long, 8 curved and 4 straight sections of track, measuring $15\frac{1}{2}$ feet. Locomotive has two sets of four large driving wheels and is equipped with controller and contact for interior illumination of passenger cars. Operates on 6 dry batteries, or reduced house lighting current.

361526 42 Outfit. \$21.00

Outfit No. 54. Same dimensions and mechanism as No. 42, with same track equipment. Locomotive body is constructed of sheet brass, with nicked trimmings and parts. A very handsome model and an attractive show piece.

361527 54 Outfit complete. \$36.00

Steam Type Locomotives

Outfit No. 5. Consists of one No. 51 Locomotive, 11 inches long, 8 curved and 4 straight sections of track, measuring $15\frac{1}{2}$ feet. Operates on 5 dry batteries, or reduced house lighting current.

361528 5 Outfit complete. \$15.00

Outfit No. 51. Same as No. 5, with addition of a double truck tender 7 inches long. Operates on 5 or 6 dry batteries, or reduced house lighting current.

361529 51 Outfit. \$17.26

Outfit No. 6

Outfit No. 6. This is larger and more powerful than the No. 5. Locomotive is $13\frac{1}{2}$ inches long and is fitted with a four wheeled pilot truck. The tender is 9 inches long. Outfit includes 8 curved and 4 straight sections of track, measuring $15\frac{1}{2}$ feet. Operates on 5 to 7 dry batteries, or reduced house lighting current.

361530 6 Outfit complete. \$23.86

Outfit No. 7. Our most beautiful and elaborate model. Unsurpassed for show-room or window attraction. Dimensions are same as No. 6, described above. Finished in nickel and brass throughout. Operates on 5 to 7 dry batteries, or reduced house lighting current.

361531 7 Outfit complete. \$43.50

Type K Transformers

No. 107. D. C. Reducer

Current Reducers

LIONEL ALTERNATING CURRENT TRANSFORMER, TYPE K

110 Volts, 60 Cycles

This transformer has a range of voltages from 3 to 29. The rheostat mounted on the slate top enables the user to obtain voltages of 15, 18, 21 and 29 without disconnecting or changing wires, by simply moving the switch from point to point. This arrangement is specially embodied so as to operate one or more train sets at different speeds without having to touch the wiring. In addition the extra binding posts enable the user to operate various other apparatus at the same time requiring any of the following voltages: 3, 5, 6, 11, 14, 15, 18, 21, 23, 26 and 29. The primary and secondary coils are enclosed in a steel case having a slate top to which the binding posts are fastened. The measurements over all are $6\frac{1}{2}$ x 5 x $3\frac{1}{2}$ inches. Transformer is equipped with 9 feet of flexible cord and a separable plug, ready to screw into the fixture socket.

List No.	Style	*List Price
361585	K Alternating current transformer.	\$11.26

DIRECT CURRENT REDUCER, NO. 107 AND NO. 170

This is constructed upon a substantial slate base, measuring 8 x 10 inches and $\frac{3}{4}$ inch in thickness. The resistance wires are wound around 4 porcelain tubes and these are protected by a perforated Russian iron cover lined with asbestos. The voltage that regulates the speed, and which is sufficient for operating any of our outfits, is controlled by a sliding lever. The reducer is connected with the house current by a screw plug, which with 9 feet of flexible cord, is provided with the apparatus. The reducer can be fixed to wall or table by using the 4 porcelain knobs and screws which are supplied with it.

ELECTRIC TOYS
Passenger Trains With Electric Type Locomotives
TO OPERATE ON STANDARD "O" GAUGE TRACK 1 1/4 INCHES WIDE

Below is listed a complete assortment of passenger trains at moderate prices. Locomotives have sheet steel bodies, headlights, and some outfits have locomotives equipped with reversing controllers.

Passenger cars are of "all steel" construction. They have flexible trucks, removable roofs, and seats in the interior. Imitation glass is inserted in windows and doors.

The track packed with each outfit is the wonderfully improved "Lionel" standard "O" gauge 1 1/4 inches wide.

Included with each outfit is a controlling rheostat for regulating the speed when trains are operated on dry or storage batteries. Full directions for operating are included with each outfit.

Outfit No. 70
Outfit No. 70

Comprises 1 No. 700 Locomotive, 2 No. 600 Pullman cars, 8 sections OC curved track, making a circle 28 1/2 inches in diameter, and 1 No. 88 controlling rheostat. This outfit will operate on 3 dry batteries, or on the house current in conjunction with **Lionel Transformers**. Length of complete train 20 1/2 inches.

PATTERSON ELECTRIC TANK INDICATORS

FOR OPEN AND CLOSED TANKS

No. A

No. B

No. D

No. E

GENERAL DESCRIPTION

These Indicators give an electrical alarm either in connection with a bell or an annunciator, showing when the contents of a tank have reached a maximum or minimum, or both. All contacts are well protected against injury.

Model A—High and Low Water Tank Indicator for closed tank.

Model B—High and Low Water Tank Indicator for open tank.

Model C—Low Water Tank Indicator for closed tank.

Model D—Low Water Tank Indicator for open tank.

Model E—High Water Tank Indicator for closed tank.

Model F—High Water Tank Indicator for open tank.

Models A and B are furnished regularly, allowing 12 inches between upper and lower balls.

Models C and D are furnished regularly with 24-inch iron pipe stem.

Models E and F are furnished regularly with 20-inch iron pipe stem.

If greater distance between base of flange and ball is required, same will be furnished up to 12 feet.

Each Indicator is shipped carefully packed in individual case, with full directions in each case for installation, even by an inexperienced person.

361244	F High Water Tank Indicator, for open tank.....	10.50

Extra length stems for any of the above Indicators per foot, \$0.60.

Models A-20 and B-21 are furnished regularly allowing 12 inches between upper and lower balls.

Models C-22 and D-23 are furnished regularly with 24-inch iron pipe stem.

Models E-24 and F-25 are furnished regularly with 20-inch iron pipe stem.

If greater distance between base of flange and ball is required, same will be furnished up to 12 feet for \$0.60 per foot.

PYRENE FIRE EXTINGUISHER

Pyrene Extinguisher

Pyrene Bracket

This extinguisher is the most efficient and practical device known for the protection of electrical risks. It is used extensively by steam railroads, traction companies and power plants throughout the United States.

Pyrene is also recognized as the most effective extinguisher of incipient fires in highly inflammable materials, such as gasoline, benzine, kerosene, oils, etc.

PROPERTIES OF PYRENE

Pyrene liquid is a combination of purely organic materials, having an aromatic odor and a high specific gravity. Pyrene contains neither acid, alkali, salts nor moisture, and will not injure materials with which it may come in contact. Pyrene liquid does not lose its strength or deteriorate with age. It will not freeze at a temperature of 50 degrees F. below zero. When Pyrene liquid is subjected to a temperature of 200 degrees F. or over, it is immediately transformed into a heavy, dry, cohering, non-poisonous gas blanket, which surrounds the burning material, cutting off the air supply necessary for the life of the fire, and thereby extinguishing it.

PYRENE DOUBLE ACTING PUMP

The device in which Pyrene is used is a double acting pump, easily operated by hand, of one quart capacity, strongly built of brass and white metal throughout. Pyrene extinguisher will throw a continuous stream to a distance of about thirty feet. The extinguisher is 3 inches in diameter and 14 inches in length, and weighs (filled) 6 pounds. It is not necessary to return extinguisher to the factory to be refilled. They may be recharged by removing the filler cap and pouring in the amount used.

THE ELECTRICAL USES OF PYRENE

The resistance of Pyrene liquid is 30,000 megohms per cubic inch. Its dielectric strength is 13,240 volts per 1/10 inch. Owing to its extremely high resistances, Pyrene will always be serviceable on the highest voltages commercially used and on all classes of electrical equipment. It may be directed between the commutator and brushes or the armature and field of any moving rotary without in any way causing damage to the apparatus or injuring the operator, irrespective of voltage used. This applies as well to controller boxes, rheostats, transformers, switchboards and all other electrical equipment. Pyrene will break an arc caused by short circuit and, when broken, the arc will not re-establish.

Western Electric VACUUM CLEANER

No. 11 Vacuum Cleaner with Tools
No. 11 Portable Type

With a Western Electric Vacuum Cleaner you can clean in one-fourth the time that it takes with the broom and dust rag. In ordinary sweeping and dusting, the surface dirt is simply dislodged to scatter its unhealthful germs in the air we breathe.

With a Western Electric Vacuum Cleaner—the modern, sanitary method of cleaning—the dirt and dust are actually drawn out of the carpets, rugs and draperies by a vacuum into a bag which may be easily detached and emptied.

The extension tool—furnished as a part of the regular equipment—will enable one to reach the out-of-the-way places—under heavy furniture that cannot be moved.

The comfortable horizontal handle—not found in any other machine—provides the most natural way for pushing a cleaner. A special device in the cleaning tool picks up all the dirt, threads and ravelings. This is the cleaner not built like a broom.

By means of the hose attachment and different nozzles, the Western Electric Vacuum Cleaner can be used for many difficult cleaning operations. Dirt that cannot be gotten at in any other way is easily removed.

A thin nozzle is very effective in cleaning the radiators. It gets in between the pipes and removes the dust and dirt. It reaches the corners which are always difficult to clean.

The handle of the cleaner remains in an upright position when not in use.

For cleaning upholstered furniture, mattresses, etc., the hose attachment is most valuable. The dust and particles of dirt which cannot be beaten out or reached with the whiskbroom are easily drawn out by the strong suction of the vacuum cleaner. By disconnecting the bag and attaching the hose to the bag connection, the cleaner may be used as a blower for blowing the dust out of the crevices, renovating pillows and drying the hair.

The old method of beating the draperies not only destroys their crispness and luster, but soon wears them out. With the extension handle and hose attachment, one can take all the dust and dirt out of the draperies without injury to the most delicate of fabrics. It enables the user to reach the tops of the doors and moldings, the plate rails and pictures high above the head.

Western Electric

VACUUM CLEANERS

No. 1 Cleaner

Extra Tool Equipment

No. 1 Cleaner

The No. 1 Cleaner is suitable for a small house, apartment or bungalow. Practical cleaner with the exception of the drum and the motor is made of aluminum. It weighs 13 lbs.

No Dirt Through Fan. A vital difference between the No. 1 and most other small type cleaners is that, instead of the dirt and dust being drawn through the fan, and expelled the fan is placed beyond the closed end of the bag, and the dirt is drawn into the bag; no dirt passes the fan. Dirt going through the fan except where liberal clearances are provided is liable to damage the fan.

Horizontal Bag. The bag being mounted horizontally, the dust and dirt fall to the low variation in the volume of air due to lifting the tool from the work constantly inflates and deflates with the consequent effect of shaking down the dirt. This arrangement is an important feature of Western Electric Cleaners.

Tool Attachment and Extension. The tool is separately attached to the cleaner, taper socket. This arrangement permits the use of an extension for the tool, for cleaning up or other low places, or for a hose connection without dismantling the cleaner or using cumbersome attachments necessary in other cleaners.

Emptying Arrangement. The bag is attached to the front cover and the two are hinged to the cleaner as a unit. The bag therefore need not be opened until it reaches the point of emptying of the dirt. There is no danger of spilling dirt inside the house.

Handle and Locking Device. Another distinguishing feature of the No. 1 Cleaner is the handle hinged to the body of the cleaner in such a way that, in storing the machine in any place, the handle is locked in a vertical position, and a minimum space for storage is required. The device locks the handle at the proper angle for operating the cleaner. It operates with the freedom of the necessity of stooping.

The handle and cord are easily removable from the cleaners. The handle forms a casing for the cord and fits into a connecting socket near the motor. The handle and the incased cord are easily pulled from the handle from the cleaner.

Mounting. The Cleaner is mounted on two wheels just under the motor. These wheels have round rubber tires which give resiliency and exceptionally long wear. They cannot scratch wood floors. The machine is perfectly balanced to get just the right pressure on the tool, with little effort in operation.

General. It will be seen that every possible refinement of detail in design and construction is incorporated in this cleaner. It is a real cleaner—not a toy, and should not be compared with the multiplicity of so-called cleaners on the market, offered at a lower price than a good cleaner could be built for.

Household Motor Applications

Western Electric

VACUUM CLEANERS

No. 2 Cleaner

No. 3 Cleaner

Nos. 2 and 3 Vacuum Cleaners

These are larger than the No. 1 Cleaner, and are adapted to use in rather large residences with somewhat heavier rugs and furnishings.

General Construction

They have the same superior features in respect to the arrangement of the bag, large clearance, high efficiency of the fan, low center of gravity and other essential respects. They are built almost entirely of aluminum with the exception of the drum and the motor, giving an exceedingly light but strong construction. The motor and fan are mounted on the same shaft and run in self-aligning ball bearings in a dust-proof casing.

Operation

Twelve feet of high-grade, non-collapsible rubber hose and twenty feet of electric cord are furnished with each cleaner, giving the machines a radius of operation of thirty-two feet from the lamp socket. Several rooms can be cleaned without taking down the cord. A slight pull on the hose will draw the cleaner over the floor. They roll easily over door sills and rugs, and because of the horizontal mounting will not topple over like many vertically mounted cleaners. Being perfectly balanced on large cushion tired wheels, they can be rolled from step to step in moving up or down stairs like a perambulator. The ease with which they can be handled is in striking contrast to other cleaners which have to be lifted bodily.

Western Electric
VACUUM CLEANERS

No. 4 Cleaner

No. 5 Cleaner

No. 4 and No. 5 Cleaners

These are exceptionally high powered portable cleaners. They are designed for the exacting requirements of large office buildings, schools, clubhouses, and other public buildings, where considerable quantities of dirt and litter must be disposed of rapidly and effectually.

Features of Construction

They are equipped with multiple fans. The No. 4 has two fan units and the No. 5 has four fan units. In these so-called multi-stage fans the air is drawn into the first fan and propelled into the fan ahead, receiving an impulse from each fan until it is finally discharged into the exhaust pipe. This gives a much higher velocity and suction than could be attained with a single fan. They have the same superior features of design and construction as the smaller cleaners.

Motor Design

Attention is especially called to the fact that the motors for Western Electric-Sturtevant Vacuum Cleaners have been designed throughout especially for vacuum cleaner work; one object having been to avoid excessive starting currents on alternating current circuits. All sizes of portable cleaners up to and including the No. 5 can be operated from the ordinary lighting circuits without change of fuses. For most other cleaners the fuse capacity must be raised, particularly for the higher powered portable cleaners, beyond the limits permitted by the underwriters.

Western Electric

VACUUM CLEANERS

No. 6 Cleaner

No. 6 Cleaner

The No. 6 is an exceedingly powerful cleaner. It has a multi-stage fan of five fan units driven by a 2 H.P. motor. It has a dust bag capacity of 4600 cu. in. when mounted in the cleaner drum. It is the most powerful and efficient portable cleaner on the market. Designed for street railway, factory and heavy industrial work and will successfully take care of any scrap litter or dirt which would be within the scope of any vacuum cleaning system. It has been built in recognition of the principle that losses of electrical energy transmitted through wires are very low, while losses in velocity, volume and suction of air moving through a piping and hose system are—comparatively—very high. Wherever conditions will permit bringing the cleaning apparatus close to the work this cleaner will give results superior to most stationary cleaner installations of similar capacity and cost.

List No.	List Price Each
6 Cleaner complete without tools.....	\$1050.00

Note: The application of this cleaner is so varied that the choice of tools is left to each purchaser to suit his individual requirements.

VACUUM CLEANER

Combined Portable Stationary Cleaner

The No. 7 combined portable cleaner especially appeals to the owners and builders of apartment house dwellings, as it permits them to equip the house for vacuum cleaning service at a minimum initial investment. On the other hand, the cleaner is necessary for a number of houses.

Second, proprietors of two or three medium sized apartment stores, who, on account of having only a lease on their property do not want to make any expensive installation. Ver-
piping is required and the cleaner may be easily carried from one store to another.

Third, the modern communities in the country where the service is more or less on the community plan.

Fourth, appeals to the small town and municipalities for several buildings, such as the town hall, schoolhouse, fire station, jail, etc., which can easily be piped and this cleaner used effectively.

No. 7 Cleaner

The No. 7 cleaner is designed to use either as a portable or stationary machine. This is an original development; application in the art of vacuum cleaning. A brief consideration of the possibilities and advantages of this system will show the wide range of usefulness. It is the only machine of its kind combining the cleaning power of the stationary machine with the inexpensiveness and portability of the cleaner on wheels.

There is nothing about a stationary vacuum cleaner that requires that it shall be solidly mounted on a furnace, engine or pump. The suctions required are comparatively low and a flexible connection to the piping system is perfectly suitable. In fact, it is preferable in some respects as tending to reduce vibration.

The No. 7 has a two-stage fan and a powerful motor. It is attached to the piping system as shown in the cut. This cleaner will do thoroughly satisfactory work in moderate sized ten or twelve rooms or less where the system can be operated through 25 feet of 2 inch pipe and 1½ inch hose. It has been thoroughly tested out under these conditions in comparison with portable permanently installed stationary cleaners of the same or higher cost and found to give equal or better performance.

Not only is the piping, tool and hose equipment and performance equal in every respect to a permanently installed system, but with the No. 7 there is the added advantage that the cleaner may be connected easily and quickly from the piping system and electric service and taken to another building if desired, a garage, summer home, or house of a friend or relative. Rows of apartment buildings may be piped with separate entrances in the basement, and one or two of these cleaners supply a whole block. Then again there are thousands of houses piped ready for vacuum cleaning service installed. This scheme enables a tenant to install his own machine and take it with him if he moves.

The cleaner rests in iron cradles for the wheels which locate it positively when in use. It has large wide tires for transporting easily over the ground, streets or walks. It can be detached from the permanent system in five seconds. It is furnished with a selected tool equipment for household use.

Vertical Type

Horizontal Type

Stationary Type Vacuum Cleaners

VERTICAL TYPES

Size A. This cleaner is adapted to installation in residences, country homes and small mercantile buildings of fifteen to twenty rooms or less. It is equipped with a universal motor of approximately three-quarter horse power capacity and has a multi-stage fan of 3 units. Tool equipment list No. 38, listed below, is included in the price of the cleaner.

Size B. This is a single sweeper plant adapted to residences, clubhouses or similar buildings of twenty rooms or more, for small hotels of approximately twenty-five rooms, or for small churches or auditoriums. It would have a limited application for schoolhouses or public buildings. It is equipped with a motor of approximately 1 horse power capacity, either alternating or direct current, 110, 220 or 550 volts. It is equipped with a multi-stage fan of 6 units. Tool list No. 38, listed on following page, is included in the price of the cleaner.

Size B2. This cleaner is adapted to installation in small apartment houses or small mercantile buildings of fifteen to twenty rooms or less. It has a capacity of two sweepers operated simultaneously. It is equipped with a motor of approximately 1 horse power capacity, direct or alternating current, 110, 220 or 550 volts. It is equipped with a multi-stage fan having 5 fan units. An equipment of two sets of tools, list No. 38, described on following page, is furnished with and included in the price of the cleaner.

HORIZONTAL TYPES

Size C. This is a single sweeper plant adapted to installation in the very largest residences with heavy rugs and carpets and elaborate furnishings, also in somewhat larger hotels, clubhouses, churches, etc., than the B size cleaner. It could be used in small schoolhouses and public buildings requiring single sweeper plant, or in small factories making light goods like jewelry, light clothing, etc. This cleaner is equipped with a motor of approximately 2 horse power capacity, either direct or alternating current, 110, 220 or 550 volts. It has a multi-stage fan of 10 units. Tool equipment No. 38, listed on following page, is regularly furnished and is included in the price of the cleaner.

For prices see following page.

Size D. This cleaner will do the best possible cleaning that can be done with a single sweeper plant. It will take care of any size building of any character where one sweeper only is required. It is equipped with a motor of approximately 3 horse power capacity, direct or alternating current, 110, 220 or 550 volts. It has a multi-stage fan of 14 units. Tool equipment No. 39 is regularly furnished with and included in the price of the cleaner.

For prices see following page.

VACUUM CLEANERS

Horizontal Type—Continued

Size C2. This cleaner is adapted to apartment houses, clubhouses or similar buildings of rooms or more, for small hotels of approximately twenty-five rooms, or small office buildings or school. It has a capacity of two sweepers operating simultaneously. It is equipped with a motor of approximately 2 horse power capacity, alternating or direct current, 110, 220 or 550 volts. It has a multi-stage fan unit. Two sets of tools, list No. 38 described below, are furnished with and included in the price of the cleaner.

Size D2. This cleaner is adapted to installation in somewhat larger hotels, club houses, churches than the C2 size cleaner. It would be used in schoolhouses, and public buildings requiring two or more plants, or in small factories making light goods like jewelry, gloves, shirtwaists, or similar products equipped with a motor of approximately 3 horse power capacity, direct or alternating current, 110, 550 volts, 1, 2 or 3 phase. It is equipped with a multi-stage fan of 8 fan units.

Size E. This cleaner will do the best possible cleaning that can be done with a two sweeper plant will take care of any size building of any character where two sweepers are required, operating simultaneously. It is equipped with a motor of approximately 5 horse power, direct or alternating current, 110 or 550 volts, 1, 2 or 3 phase. It is equipped with a multi-stage fan of 12 units. Two sets of tools, list No. 39 described below, are furnished with and included in the price of the cleaner. The weight of the cleaner is 2500 pounds, shipping weight with tools, 3200 pounds.

Size F. This cleaner will do the best possible cleaning that can be done with a three sweeper plant will take care of any size building of any character where three sweepers operating simultaneously required. It is equipped with a motor of approximately $7\frac{1}{2}$ horse power, direct or alternating current, 110 or 550 volts, 1, 2 or 3 phase. It has a multi-stage fan of 12 fan units.

Size G. This cleaner will do the best possible cleaning that can be done with a four sweeper plant will take care of any size building of any character where four sweepers operating simultaneously required. It is equipped with a motor of approximately 10 horse power, direct or alternating current, 110 or 550 volts, 2 or 3 phase. It has a multi-stage fan of 12 fan units.

Household Motor Applications

"GEYSER" DISHWASHER

"Geyser" Dishwasher

Interior View

Electric Dishwasher

Operation. The dishes are brought from the table and prepared in the usual way and set direct into a rack designed to hold the various shapes and sizes, the cups and smaller pieces being placed in the inner circles while the glassware and silver are laid in a wire basket which fits into the top of the machine. About six or eight quarts of water is then run into the tank and a little liquid soap added to makesuds. The rack of dishes and the basket of glasses and silverware are then placed in the machine, the cover fitted on, and the machine started by attaching the cord to any electric lamp socket and turning the switch. Soapy water is forcibly circulated over the dishes by the pump, through the perforated pipe in the center of the machine, until every particle of food and grease is thoroughly washed off. Less than a minute is required for washing the dishes.

Machine Self-cleaned. With the rack and basket out of the tank, running the machine for a minute with clean, hot water left in is sufficient to thoroughly cleanse the tank and pump.

Construction. The "Geyser" Dishwasher is made either of heavy copper, nickel plated or Premier Brand stannic metal, non-rusting, a material suitable for the average home. The center cylinder is of brass and copper nickel plated inside and out, threaded at the top and bottom for convenience in cleansing and ready removal. The racks are made of non-rusting wire and designed to hold a large number of dishes in direct contact with the streams from the cylinder.

Pump. The pump is direct-coupled to motor shaft for 60 cycles and direct current.

Motor. The motor is a Western Electric $\frac{1}{4}$ horse-power especially designed for use with these machines. The motor and pump are placed entirely underneath the tank where they cannot be damaged by water. All castings standard.

Dimensions. Diameter $25\frac{1}{2}$ inches; length 36 inches.

Western Electric

Washer and Wringer

Washer and Wringer

All moving parts of the Western Electric Washer are enclosed.

This machine can be operated with perfect safety by any woman or child.

It is the safest washer made and the safest washer made is the safest washer to sell.

It is the only machine that has three free sides around which the operator can work without obstruction.

It occupies less floor space than any other machine of equal capacity.

Has patented safety release on wringer which prevents tearing of clothes due to clogged wringer.

There are no bolts or chains to slip or break—no complicated machinery to get out of order. The automatic reverse is accomplished by means of an absolutely new mechanical movement, having by far fewer parts than any other reversing cylinder machine on the market.

Simple. The machine is composed of but 35 parts against more than 100 in the next simplest machine. Operated by only 2 levers—one for washing and one for wringing.

Operation. Machine operates on the reversing cylinder principle, which is conceded by experts to be the only correct method for washing clothes clean and without injury. The wringer has 2 rolls, reversible, and the rolls are made of the best Para rubber. This machine will do the washing of a family of four in one hour at a cost of only 2 cents for electricity.

Sanitary. Tub is completely lined with metal, leaving no crevices or corners for the collection or absorption of impurities. Easily emptied by means of a faucet in bottom of machine.

"SIMPLEX" IRONING MACHINES

The "Simplex" Ironers are simple and durable and can be operated with ease and safety by inexperienced help. The principal features of the "Simplex" are: A well padded roller, operating under adjustable spring pressure against an accurately machined and highly polished shoe, its concave face forming contact with the circumference of the padded roll. This shoe inclines to the rear and draws its heat from a burner which extends across its back for the full length. Motor attached machines are furnished with plug connected to ordinary light socket with the exception of the 48 and 56 inch ironers, on which connection should be made direct to the line. Prices include gas or gravity gas-oil burners.

Western Electric

CEILING AND COLUMN TYPE FANS

32 Inch Alternating Ceiling Fan Two Speeds

32 Inch Direct-Current Ceiling Fan

Alternating and Direct Current

The leading characteristics of the Western Electric ceiling and column fans are their small current consumption, quiet operation, and the small amount of attention required for their maintenance.

The standard fans are equipped with blades to throw the air downward, but if desired these blades can be arranged to reverse the air flow, an arrangement which is sometimes desirable where the fan might disturb papers, as in offices and banks. Such fans are supplied without extra charge.

The Western Electric 32 inch ceiling fans are specially designed for use in hotels, small offices, and narrow hallways.

The Western Electric 56 inch and 58 inch ceiling fans are recommended for use in large hotels, theaters, restaurants, offices and stores.

Finishes. Standard finishes are black enamel, white enamel and mottled copper, as listed on preceding pages. Other special finishes can be supplied at a slight advance in price.

Construction. The alternating current fans are of the induction type and direct current motors are series wound. The alternating current fans use ball bearings, and the shafts being of hardened steel insure a long life without appreciable wear.

Lubrication. The lower bearings of the 32 inch and 56 inch fans are immersed in oil, and when the motor is in operation this oil is pumped upward along the shaft by means of a spiral groove on the shaft, and flows back into the reservoir around the bearings. This insures a perfect circulation of oil, and one filling of the oil reservoir a year is sufficient for these parts.

Blades. The standard fan is equipped with four blades. The 58 inch and 56 inch fans have wooden blades with mahogany finish, and the 32 inch direct current fans have wooden blades with natural finish. The 32 inch alternating current fans have aluminum blades with frosted finish.

Electrolier Attachment. The 56 inch fan can be arranged for two light or four light electrolier attachment.

The 32 inch fan can be arranged for single light or two light electrolier attachment, the lamps being mounted below the blades.

DIMENSIONS

The 32 inch A.C. fan is 37 $\frac{1}{4}$ inches in height. The 32 inch D.C. fan is 36 inches in height. The 56 inch A.C. fan is 49 $\frac{1}{2}$ inches in height. The 56 inch D.C. fan is 50 $\frac{1}{4}$ inches in height. The 58 inch D.C. fan is 55 $\frac{1}{2}$ inches in height.

Column Fans

The column fans are identical in construction with the ceiling fans, and are made with 56 inch sweep. The blades of the floor column fans are 7 feet above the floor, and counter column fans can be furnished in heights of 36 $\frac{1}{2}$, 44 and 48 inches. Where no height is specified the fan with 44 inch column will be supplied.

SUSPENSION DETAILS FOR CEILING FANS

A ceiling canopy, a ceiling hook, and an insulating hanger are furnished with each fan. Other suspension details are furnished as shown in the following table. Stem and casing, when furnished, suitable for 12 foot ceilings.

OSCILLATING FANS

Direct and Alternating Current

8 inch Oscillator

Diehl 8 Inch Oscillating Fans

Four Blades

The Diehl 8 Inch Oscillators create air movement over all parts of a widely extended area, the swing or oscillating motion being so timed that there is no space within its range in which the air is even momentarily "dead." The use of a desirable number of these fans in large rooms, offices and places of like character has two distinct results: First, by a proper combination of angles the whole enclosure is efficiently and gently relieved of "dead" air. Second, individual units or groups within range of each fan receive a direct and pleasing breeze. They combine extremely light weight, mechanical and electrical excellence, attractive appearance and low operative cost, the current consumption being less than one half of that of the ordinary incandescent lamp.

CONSTRUCTION

Enclosure. Body and gears are entirely enclosed in a dustproof die cast shell, which is both light and strong.

Gears. Gears are few in number and constructed upon simple mechanical principles. Positive non-slipping oscillation is the result.

Adjustment. 8 inch oscillating fans may be used in either standard desk positions or as wall brackets.

Motion. Actuated by gears the fans body turns or oscillates upon a swivel, the extreme distance of turn being 90 degrees, or "quarter way 'round."

Finish. Body, stem, base and guard are finished in dull black; blades in polished brass.

Base. The base is broad enough to insure stability and is in keeping with the general contour of the fan.

Regulation. A regulator mounted in the base provides a range of three speeds, one of which will be found adaptable to the moment's desire. Base and rubber pad have drilled holes to admit a standard size screw for bracket mounting.

Tripod Cotter Pin Suspension Style

8 Inch Battery Fan

No. 203087
Stay Rod Suspension Type

Telephone Operating Room Fans

These fans have been designed to meet the special requirements of telephone companies for a slow speed, noiseless, easy running fan for use in telephone operating rooms.

These fans, which are modified types of Western Electric standard fans, are furnished in two styles, tripod cotter pin suspension type and the stay rod suspension type. Each type of fan is furnished for both direct and alternating current. The tripod cotter pin suspension type in the 16 inch size and the stay rod suspension type in the 12 inch size. Both types are furnished with 6 blade drawn steel frame fans with blade guards and screws finished in black.

Knapp 8 Inch Battery Fan

Type B. F.

A portable model of simplicity for the home, office or sickroom.

POINTS OF CONSTRUCTION

Armature, laminated. Field, two-pole. Commutator, drawn copper segments, insulated with mica. Brushes, copper gauze, self-adjusting. Oil cups, wick feed. Base, fitted with starting switch. Finish, black japan, with brass polished fan and guard.

BATTERY

This is an ideal outfit with a 6 volt storage battery. Twenty good dry cells, 6 x 2½, connected 5 in series, 4 multiples, if run three hours per day will last for 200 hours upward; more continuous work will lessen the total run.

The box for 20 dry cells is wired complete and a diagram furnished, showing how to put in the cells and connect.

Performance: Speed, 1600 R.P.M. Volts, 6. Amperes, 1.

Alternating and Direct Current

Small Western Electric ventilating outfits are recommended for use in kitchens, grill rooms, chemical laboratories, restaurants, etc., to draw off the heated and vitiated air or fumes and replacing with pure, fresh air from outdoors. This change is effected without the creation of draughts. The fans are supported in frames suitable for mounting in wall openings and should, wherever possible, exhaust into the open air.

Household Motor Applications

STURTEVANT VENTILATING SETS

Modern Kitchen Equipped with Ventilating Set

Ready-to-Run Ventilating Sets

Adaptability: Although primarily ventilating sets, their varied applications for blowing, exhausting, cooling and drying purposes have proved the ready-to-run ventilating sets of more value than ordinary ventilating fans. Light, compact and self-contained, they are not only "ready-to-run" as their name implies, but portable as well. The purchaser of one of these smaller sets will find that he may easily move it from place to place, attaching it to the most convenient lamp socket, and that it will serve him in numberless ways.

Uses: Ready-to-run sets are in use ventilating offices, telephone booths, bedrooms, kitchens, stores, clubrooms, railroad and electric cars, theatres, restaurants, engine rooms, toilets, ships, etc.; for cooling vaults, electric motors, printers' inking rolls, photographic dark rooms, and stuffy, poorly ventilated rooms; for quickly drying paints and varnishes, tubs and vats in breweries, for exhausting fumes from vats, steam and odors from kitchens and laboratories, and smoke from smoking rooms; cooling spark gaps in wireless telegraphy, and in fact for countless purposes too diversified and numerous to mention.

Construction: The ready-to-run ventilating set consists of a small volume fan wheel of the well-known Sturtevant Multivane type, the most efficient commercial fan in the world, enclosed in a casing of pressed steel and driven by a Western Electric Motor on the same shaft. Casing and motor are securely fastened together and arrangement is made so that the blower can discharge vertically upward or downward, or horizontally in either direction.

An inlet and outlet connection permit the attachment of inlet or outlet pipes. Air from outside may be blown into an apartment, or the air may be exhausted from it and discharged outside; in either case a positive change of air being assured.

Sizes: Five sizes of ready-to-run blowers are built, the first four of which may be run from a lamp socket by merely turning the lighting switch. The largest of these sets, known as the size E, is equipped with a starting box and is wired in a fixed position, it being too heavy to be easily portable.

The following table gives useful information for the purchaser in deciding the set best suited for his needs.

The following prices and data cover sets wound for 110, 220 volt D.C. and 110, 220 volt 60 cycle single phase A.C.

Western Electric VENTILATING OUTFITS

*Constant Speed D.C. Motor
Connected to Davidson Fan

*Constant Speed Induction Motor
Connected to Davidson Fan

Variable Speed Induction Motor
Connected to Davidson Fan

DAVIDSON EXHAUST FAN OUTFITS

These outfits consist of a motor of the open or totally enclosed type, a strong supporting tripod, set of fan blades, and in the case of the direct current motors a speed regulator. Standard Western Electric motors are used exclusively on these outfits. These motors represent the most advanced electrical and mechanical improvements in motor construction. The motor speeds are those at which the fan should revolve to move a maximum volume of air, the motors being designed for most efficient operation at these speeds.

The direct current outfits are equipped with armature speed regulator capable of producing a 50 per cent. reduction in the speed. The alternating current outfits are furnished for constant or variable speed.

Household Motor Applications

WESTERN ELECTRIC SEWING MACHINE MOTOR

Sewing Machine Motor

Pedal

Western Electric Sewing Machine Motor

This simple little wonder-worker changes any sewing machine, old or new, into an electric self-operative labor saver.

It is mounted on the sewing machine and ready for work without removing any part of the mechanism of the sewing machine, except the belt, which may be readily slipped off.

No matter what the make or style of your machine, or how old it is, the Western Electric Sewing Machine motor will relieve you of the treadmill grind of running it.

Just place the motor on your machine next the wheel. Attach the plug to any electric light socket; then place the little pedal on the floor. A slight pressure of your toe starts the wheel. Don't work your foot. Just press a bit harder to go faster, no effort is required; no exertion whatever. You touch the wheel, it will turn right automatically. No broken threads; no jerks. Just a silent, steady motion which stops the instant you remove foot from pedal. All kinds of sewing can be done. Without extra pressure it will put the needle through several plies of heaviest fabric. You can do fancywork, quilting, etc., and all the attachments are more easily used because your attention is undivided. The cost of running is scarcely more than a small 8-candle power light. Guaranteed against electrical or mechanical defects for a period of one year.

Mixer
"Cyclone" Electric Drink Mixer

This mixer is one of the best profit producers ever placed on a fountain or bar. An entirely new design that will positively mix any drink your customer calls for, and mix it far better and quicker than the most expert operator with the old time hand shake. Eggs, ice, lemons or any ingredients or linarily used can be prepared and the drink compounded in the usual manner. Then let the machine do the mixing instead of using the shoulder wrenching hand shaker. The mixer is so constructed that the mixing glass and mixing blade can easily be cleaned after each individual drink, thus insuring cleanliness and positive sanitation.

PAUL ELECTRIC PUMPS

Fig. 803—Motor Driven

Fig. 804—Belt Driven

Paul Type E Pump, Motor Driven FOR SHALLOW WELLS

The Paul Type "E" Pump, as illustrated by Fig. 803, is especially adapted for residence service where the vertical suction lift is 20 feet or less. On account of their vertical design and very small floor space occupied, these pumps may conveniently be connected to the piping of existing systems when replacing hand pumps, water lifts or other power pumps. These pumps are also conveniently arranged with tanks, automatic electric pressure controllers and fittings assembled and mounted on cast iron bases, thus forming complete systems. (See following page.)

SPECIFICATION

The slow speed pump of a very special, yet extremely simple design (patent applied for) is bolted to the outside of a box shaped cast iron frame, fully accessible. It is double acting, brass fitted, with high grade rubber valves on brass seats and cup leather packing. The suction pipe entering below and the discharge pipe above can be swung in any desired direction. The frame also carries a perfectly silent and efficient drive, consisting of pulleys and flat belt with a low ratio of speed reduction in connection with a set of machine cut, slow speed, spur gears. Large removable bearings bolted to the face of the frame, insuring accurate alignment carry the intermediate shaft with pulley and pinion and the crank shaft with gear. The gears are central between bearings inside the frame, thereby completely encased. Conveniently located grease cups are provided for crank pin and all bearings. The crosshead end of the connecting rod works in a bath of oil. All parts subject to wear are easily renewable.

Paul Type E Pumps, Belt Driven

Fig. 804 illustrates Type E Pump with pulley ready for belting up to any existing drive and for connection to suction and discharge pipe. General specifications see table below.

COMPLETE PAUL WATER SYSTEM

System 900, Side View

System 900, Front View

Complete Paul Water Systems WITH TYPE E PUMPS

Complete systems are shipped ready for connection to suction and service pipes. The motor may be used for driving light machines when not pumping.

The Paul Hydro-pneumatic Air Charging and Priming Device (patented) is furnished with all complete systems. It is positive in its action, works to perfection and can under no circumstances unprime the pump. The Paul Automatic Electric Pressure Controller No. 190381 adjusted 30 lbs. minimum and 50 lbs. maximum is regularly furnished with the systems; other adjustments will be furnished when ordered.

Systems 900-A and B listed below are furnished with galvanized pneumatic tanks. They are made of grade steel with welded seams, tested at a pressure of 100 lbs. per square inch and guaranteed for at least 75 lbs. working pressure.

Complete Paul water systems for residence service are listed below in sizes to meet average requirements. The vertical suction lift is 20 feet or less.

Systems Nos. 900 and 901 consist of the following equipment of sizes and capacities listed below.

(ne) Paul Type E Pump, (capacity as listed) fitted with electric motor.

(ne) Paul (guaranteed) Hydro-pneumatic Air Charging and Priming Device (patented) attached to

(ne) Paul Pneumatic Galvanized or Black Tank, as listed.

(ne) Paul Automatic Electric Pressure Controller, (Underwriters' Approval) set at 30-50 pounds.

(ne) Each of water gauge, pressure gauge, checkvalve, relief valve, stop valve, foot valve and all between pump and tank.

Hold Motor Applications

PAUL TYPE D PUMP

Paul Type D Pump

For Shallow Wells, Motor Driven

The Paul Type D Pump is a reliable high grade pump of moderate capacity, suitable for individual water supply systems and for a variety of special purposes in localities where the water in cistern, well, lake or spring does not recede beyond twenty feet vertical suction lift. This pump is exceptionally strong, easily accessible and convenient to handle. Workmanship and material are of the highest grade and all parts are interchangeable. We invite the closest investigation into its design, in general and in detail. Every pump is tested and adjusted before it is allowed to leave the factory.

The pumps are double acting, fully brass fitted, driven by electric motors through noiseless ball bearing worm gears and mounted complete on rigid cast iron bed plates. Ample suction and discharge air chambers form part of the pumps, insuring a steady flow of water and smooth action. They not only possess all features of value in a good pump, but are especially designed to overcome, in a simple manner, the tendency of small pumps to lose their priming.

The piston rod packing is under constant pressure and only one joint, that of the back head, is required to be tight against suction, making it exceptionally easy to avoid air leaks in the pump.

All wearing parts are constructed of special phosphor bronze metal, are adjustable for wear and are provided with the proper means for lubrication.

The complete line of Paul Type D Pumps have capacities of 150, 300, 600 and 1200 gallons per hour, respectively. The design in general is carried out on all sizes. They are most desirable for house-service installations demanding a direct connected motor driven unit.

Household Motor Applications

Western Electric

PAUL HOUSE PUMP

Type "F" Electric House Pump

Western Electric House Pump

The Paul Type "F" Electric House Pump has been designed especially to supersede the water motor driven pump, to positively do away with all the troubles connected therewith and to practically eliminate care and repair. Being noiseless in action, small in size, simple, strong and self-contained, it fills the requirements for residence service in the most ideal manner.

The pump bolted to the fully enclosed crank case frame is of the piston type, fully brass fitted. It is good for a suction lift of twenty-five feet. For lifts below twenty feet, no priming is required when starting up dry. The lubrication is entirely automatic and of the splash system.

DIMENSIONS AND WEIGHT

Household Motor Applications

· MULTIVANE FORGE BLOWERS AND DUST BLOWERS STURTEVANT TYPE

Electric Forge Blower

Electric Dust Blowing Set

Electric Forge Blower

The Sturtevant Forge Blower is of sufficient capacity to handle one large or several small forges. Through a tuyere having an area of 1.5 square inches it will bring to welding heat two-inch round soft steel stock in two and one half minutes.

This blower is also adapted for use in connection with blow pipes, soldering tubes and similar apparatus.

The high efficiency of this blower is due largely to the construction of its fan wheel, which is of the Sturtevant multivane type. This wheel consists of many narrow blades, allowing large inlet area, it is attached directly to the extended shaft of an electric motor. The casing surrounding the wheel is of pressed steel and is the result of long experimenting to secure a casing of the highest efficiency. It is arranged to revolve, discharging in any desired direction, and is attached to the frame of the high grade electric motor mounted upon a cast iron sub-base. The complete set is but 14½ inches high, 10 inches wide and weighs but 35 pounds.

List Price Each
\$64.00

Multivane forge blowers.....

Electric Dust Blowing Set

This portable dust blowing set is designed for blowing purposes to replace or to be used instead of a compressed-air system. It is used for blowing out dust from around motors, switchboards, textile or other machinery. It is composed of a small, specially designed light aluminum fan and case driven by a direct connected electric motor built to operate from the lighting circuit. The set includes a twelve-foot length of 1½ inch air hose, reinforced and flexible, and a ten-inch nozzle. A twenty-foot electric light cord and plug attachment is also furnished which, with the twelve feet of hose, gives a working radius of thirty-two feet from the lamp socket.

This set will be found very satisfactory for suction cleaning where a dust collector is not required. It is only necessary to attach one end of the hose to the inlet of the fan instead of the outlet and to use with a vacuum cleaning tool on the other end. The fan will suck the dust through the wheel and discharge it at the outlet or through another hose run to some collector or out of doors. Care should be taken not to pick up pieces of metal that would injure the fan wheel when using the dust blower as a cleaner. As it weighs only about fifty-five pounds and as it can be used from lamp socket, this blowing set is especially valuable on account of its portability.

List Price Each
\$104.00

Electric dust blowing set.....

Sturtevant Vacuum Horse Grooming Set

Horse Grooming Set

Delivery F. O. B. Factory, Boston, Mass.

Household Motor Applications

This set provides the quickest, the most sanitary and most satisfactory means of grooming horses. A specially designed flexible curry comb attached to a very light weight wire reinforced vacuum hose is inserted into the inlet of the blower. This special curry comb raises the loose hair, dirt and dandruff from the horse's skin while the strong, steady suction created by the machine carries it away, discharging it into a bag outdoors or into the cellar, leaving the horse's skin clean and free from irritation. The set consists of a fan rigidly mounted upon the shaft of an electric motor and enclosed in a casing of aluminum both mounted upon the same base, making a compact, simple and portable machine. The curry comb is made of cast aluminum and is a very efficient cleaning tool. It thoroughly grooms the horse's coat, the dust being drawn between the teeth into the suction hose.

List Price Each

Sturtevant vacuum horse grooming set, complete with aluminum curry comb, suction and blowing hose..... \$130.00
Flexible curry comb..... 17.00

"AMERICAN BEAUTY" ELECTRIC IRONS

"American Beauty" Iron

Domestic "American Beauty" Iron

This iron represents the highest art of making electric flat irons. It is not only a beautiful looking iron, finished in polished nickel, but has every refinement. It is suitable for all around household or laundry work. The service which it gives the user is in every way as perfect as can be given. Sufficient heat is generated and concentrated evenly on the ironing surface without wasteful loss from the top and sides.

This "American Beauty" iron can be furnished on special order with what is called "Morocco" ironing surface. The edges and point of the iron are beveled and rounded. On special order voltages of 30 and 60 can be supplied at no extra charge.

Guarantee—The heating element is guaranteed for all time. Should it prove defective at any time, a new one will be given by the dealer or by us.

"AMERICAN BEAUTY" UTENSILS

Toaster

Toaster—In Use

"American Beauty" Toaster

With this toaster two slices of bread at a time can be made into crisp, fresh, delicious toast right at the dining or tea table, where the toast can be served, buttered and eaten while crisp, fresh and piping hot.

The toaster is made entirely of sheet steel and is unbreakable. It is finished in polished nickel and is provided with four fiber heat insulating legs which prevent any possibility of the surface on which the toaster is resting being scorched or scratched.

Low Voltages—On special order, the toaster can be supplied in voltages of 30 and 60 at no extra charge. There will be an extra charge for toasters in these unusual voltages.

Guarantee: The life of this Toaster is guaranteed for two years. With ordinary care it will last indefinitely.

Electrical Heating Devices

Toaster Stove

Triangle Lektrik Toaster Stove

With this Toaster Stove of many uses a meal can be prepared right at the dining table. The heating coils are placed as shown in the above illustration, so as to make it easy and convenient to make two slices of toast at a time, one above and one below the heating coils. Or a slice of toast can be made below the heating coils and at the same time a flat bottomed utensil can be placed on top of the Toaster Stove, in which can be made tea, coffee, breakfast food, etc., or eggs may be fried in a skillet placed on the top of the Toaster Stove.

The device is made of sheet steel, finished in polished nickel, is light in weight and unbreakable. It is provided with three heat insulating legs of fiber, so that the surface on which the stove is resting will not be either scorched or scratched.

Comes complete with cord and plug, and can be attached to any ordinary lamp socket.

The electrical terminals on which the cord is attached to the Toaster Stove are protected by a steel plate, thus preventing the possibility of any liquid being spilled which will affect the electric connection at the Toaster Stove.

List No.	Watts	Voltage Ranges	Diam.	Net Weight	List Price Each

"AMERICAN BEAUTY" UTENSILS

No. 2506 Perculator

Tea Samovar

"American Beauty" Electric Coffee Percolator

This percolator is made in a new improved design. It embodies all the desirable features of a perfect coffee machine together with the convenience of electric heat. The pump used is a new design and one that will give absolutely perfect satisfaction to the user. Long, graceful curves and highly polished nickel finish make this a very handsome device. Will hold six large cups of coffee.

List No.	Watts	Capacity	Shpg. Wt.	List Price Each
2506	350.	6 cups	12 lbs.	\$20.00

Tea Samovar

The Samovar is a beautiful article, finished in polished nickel. It is furnished complete with cord ready for use. The tea leaves are placed in the tea ball which is then drawn up into the cover. Electric heat is turned on. In a few minutes the water boils. The tea ball is then lowered into the water. It is raised again into the cover when the tea has steeped enough. On special order this device can be supplied 30 or 60 volt circuits at no extra charge.

List No.	Watts	Capacity	Net Wt.	Shpg. Wt.	List Price Each
2306	450	6 cups	4½ lbs.	11 lbs.	\$26.80

Tea Kettle

Chafing Dish

Tea Kettle

This is a very neat little article. It is furnished complete ready for attachment to lamp socket. It is quick heating, boiling its contents in 5 or 6 minutes, starting everything cold. On special order this device can be supplied for 30 or 60 volt circuits at no extra charge.

List No.	Shpg. Wt.	Shpg. Wt. (½ Doz.)	Watts	Capacity	List Price Each
5415	4½ lbs.	40 lbs.	500	1 quart	\$16.00

"American Beauty" Chafing Dish

This is a most satisfactory article for the home. It cooks quickly and efficiently. A snap of the switch turns on the heat, and this heat can be regulated—mild, medium and full. It is furnished complete, ready for attachment to lamp socket. Standard finish nickel, copper finish can be had on application without extra charge.

List No.	Max. Watts	Shpg. Wt.	Capacity	List Price Each
355	600	8 lbs.	3 pints	\$20.00

Always specify voltage when ordering.

Electrical Heating Devices

"AMERICAN BEAUTY" HEATING DEVICES

Serving Tray Heater

"American Beauty" Serving Tray Heater

These heaters are especially designed and adapted for keeping food and dishes warm, particularly for use on the serving table. It is furnished complete in polished nickel with a six-foot detachable cord, having lamp socket attachment plug.

List No.	Net Wt.	Shpg. Wt.	Max. Watts	Length	Width	Height	List Price Each
6715	14 lbs.	25 lbs.	350	16 ins.	12 ins.	3 ins.	\$20.00

Always specify voltage when ordering.

Warming Pad

Foot Warmer

Western Electric

"American Beauty" Warming Pad

This device fulfills the function of a hot water bottle. It is rectangular in shape, 12 x 13 inches, and is thin, soft, pliable and flexible. A double-working automatic thermostatic protective device is supplied with each Warming Pad for safety's sake.

List No.	Watts	Size	Net Wt.	Shpg. Wt.	Heat Reg.	List Price Each
1810	60	12 x 13 ins.	15 oz.	2 3/4 lbs.	1	\$10.40
1815	60	12 x 13 ins.	15 oz.	2 3/4 lbs.	3	12.00

Eider-down cover is usually furnished. If rubber cloth cover is wanted instead, list prices will be \$1.04 extra for the No. 1810 and No. 1815.

Voltage ranges 95-125 and 190-250.

"American Beauty" Foot Warmer

The Foot Warmer is for use under desks, chairs or tables. It gives off a mild heat and in addition to being used as a foot warmer, it is often used to heat small closets and other small places. It may be attached to any ordinary electric lamp socket, and comes complete with six-foot cord and attachment plug. The Foot Warmers are finished in black japan.

List No.	Watts	Size	Shpg. Wt.	List Price Each
780	200	10 x 12 ins.	18 lbs.	\$8.40
781	400	10 x 12 ins.	18 lbs.	8.40

"AMERICAN BEAUTY" LUMINOUS HEATERS **Luminous Radiators**

One Lamp Type

Two Lamp Type

Three Lamp Type

PORTABLE LUMINOUS RADIATORS

These portable luminous radiators are of most attractive design and finish. Naturally the one and two lamp types do not give off as much heat as the three lamp type, but they are particularly desirable and serviceable for service where a mild heat is desired. The standard finish of these heaters is brushed brass, but polished brass, polished nickel or oxidized copper finish can be furnished at same price. Each heater has a cord, 8 feet in length, detachable at the heater. The one and two lamp types are attachable to lamp socket, but the three lamp type should not be attached to lamp socket. The price of lamps is not included. For price of lamps see listing elsewhere.

One Lamp Type							List Price (Without Lamps)
List No.	Height	Width	Diameter Over all	Depth	Weight	Shpg. Wt.	
6280	15½ ins.		8 ins.		5 lbs.	15 lbs.	\$8.80
Two Lamp Type							List Price (Without Lamps)

6270	15½ ins.	11 ins.		7 ins.	7 lbs.	20 lbs.	\$10.40
Three Lamp Type							List Price (Without Lamps)
6280	19 ins.	18 ins.		7½ ins.		35 lbs.	
6280	19 ins.	18 ins.		7½ ins.		35 lbs.	\$20.00

Always specify voltage when ordering.

Wall Type

Round Type

WALL TYPE

The Wall Type Luminous Radiator is to be permanently installed in the wall. It has copper reflector behind the lamps and air jacket between the copper reflector and the steel shell which fits into the wall. This air jacket acts as a heat insulation. Thus any fire risk is reduced absolutely to the minimum.

We can furnish this type in two designs of front plate. The one not shown is a perfectly plain design. The standard finish is nickel. Special finishes can be supplied at extra cost.

WALL TYPE							List Price (Without Lamps)
List No.	Height	Width	Depth	Net Wt.	Shpg. Wt.		
6235	16¾ ins.	16¾ ins.	5¼ ins.	28 lbs.	70 lbs.		\$18.00

ROUND TYPE

This Round Type Luminous Radiator is another form of the portable type shown above. It is desirable in cases where it is required that the heat be thrown evenly in all directions.

ROUND TYPE							List Price (Without Lamps)
List No.	Height	Diameter over all	Shpg. Wt.				
6125	20 ins.	13 ins.	30 lbs.				\$22.40

ADJUSTABLE AIR HEAT

Nos. 4708, 4712, 4722, 4730
For wall, use adjustment made by
loosening lock nut at side

Adjustable Air Heater

These heaters are a recent development in electric heating device a low priced article of high quality. They are adjustable for use either on the wall or on the floor. This heater is furnished in several sizes, with and without the deflector.

As these heaters are very compact, they are especially desirable for other places where space is limited; but they are equally desirable for open rooms.

These heaters are practically indestructible as they are made with steel casings and internal supports of cold rolled steel. The heating elements are sheathed and properly supported and built according to Underwriters' requirements.

All elements are interchangeable and renewable and made for 250 volts. They are installed in a heater to make the required or rated wattage. They are finished in black japan, made for one heat only and arranged vertically.

No cords or plugs are supplied. Made for standard voltage ranges: 95-104, 105-114, 115-125, 130-209, 210-229, 230-250.

Nos. 4705, 4710, 4720
With deflector, can be installed on wall or floor

Doubt

All heaters have adjustable legs as shown in the illustrations, either to the wall, the floor, or set on the floor.

The deflector plate prevents the heat from striking through on the floor and throws the heat outward into the space to be heated. The deflector weighs from 5 to 12 pounds each more than the net weights of the heaters.

List No.		Height
4705	500 watt, no deflector.....	10½ ins.
4708	700 watt, with deflector.....	12¾ ins.
4710	750 watt, no deflector.....	10½ ins.

"AMERICAN BEAUTY" AIR HEATERS

Wall Type

Plug No. 806

Plug No. 805

Portable Type

Electric Air Heaters

These Air Heaters embody many new features in design and construction. They are practically indestructible. The voltage of the heater determines its size. In estimating the size heater required, it is a general rule to figure about two or three volts per cubic foot of air space to be heated. But much depends on the construction of the room or building.

Each heater is equipped with indicating snap switch and terminal box. With portable type, detachable plug and cord can be supplied at extra cost, or line wires can be attached to heater at terminal box. With wall type, line wires are to be attached to heater at terminal box.

WALL TYPE

List No.	Heat Reg.	Watts	Size over all			Net Wt.	Shpg. Wt.	List Price Each

Glue Pot

Solder Pot

"American" Electric Glue Pot

This is a most efficient article for use in a wood working establishment, paper box factory or in any place where glue is used. These glue pots are built with a water jacket, the glue being heated by the hot water. The heating element is attached directly to the water vessel. The outer casings completely enclose and protect the element.

All pots are arranged with three-heat regulation, the minimum heat is sufficient to keep the glue at the right consistency. All glue pots are furnished complete with 6 feet of flexible conductor cord and porcelain three-heat plug switch.

List No.	Max. Watts	Capacity	Shpg. Wt.	List Price Each
141	500	1 quart	18 lbs.	\$18.40
143	650	2 quarts	25 lbs.	20.80

Temperature Regulators

By means of these Regulators or Rheostats, the temperature of the irons or other devices can be regulated from full heat to just enough to keep them warm. Satisfactory results can be obtained without the use of these regulators, but in some cases they are very desirable, as where irons have to be kept heated ready for use at any time.

A separate rheostat is necessary for each iron or device.

The R Type regulator is for the smaller devices consuming not over 250 watts.

List No.	Size	Height	Shpg. Wt.	No. of Heats	For Devices Consuming not more than	List Price Each

403	10 ins.	10½ ins.	9 lbs.		1000 watts	9.60

Three Heat Switches

These plug switches are regularly supplied with immersion coils, hot water urns, coffee urns, ovens, glue pots, solder pots, laboratory plates and griddles. By merely inserting the plug in different positions, various heats are obtained in the devices. These switches cannot be used with devices for one heat only; in fact only with those devices having three binding posts, as the various heats are obtained by connecting the heating element in multiple or series, this result being obtained by merely inserting the plug in different positions.

Switches are made entirely of porcelain with heavy brass contacts. May be used for open or concealed wiring, and have a capacity of twenty amperes at 250 volts.

Flexible Conductor Cords

This cord is of the highest possible grade and the greatest durability. This is important, for the conductor cord of an electric heating device is subjected to much twisting and bending.

POLISHED YARN COVERED CORD

National Code Standard

This cord is made with special braided copper conductor, covered with rubber insulation with pure braided asbestos insulation over this. The outer covering is of polished yarn. Color is black except in the case of cord No. 850, which can be supplied in black, or mixed red and black. The conductors are twisted.

The cord used on 9B, 12B, 16B, 20B, 20HB, 24HB, 16VB and 20VB Irons is No. 14 double conductor twisted, black polished yarn covered—Mfr. No. 852.

ELECTRIC RANGES

No. 44

No. 33

Hughes Range No. 44

This range is of the same type and general construction as the No. 33. It is of ample size to meet the requirements of a large family. The top has four burners, two of which the rear burners have a current consumption of 880 watts, left-hand front burner, 1100 watts and the right-hand front burner, 1500 watts. Current consumption of the oven burners is 1100 watts on the "high" heat, 550 watts on the "medium" and 275 watts on the "low." The oven is six inches deeper, inside measurement, than the oven of the No. 33 Range, and is the same size as the standard gas oven. It is also equipped with broiling pan and rack, the top unit in the oven being utilized for broiling purposes. Dimensions: Height from floor to top of oven, 62 inches; cooking surface, 24 x 25½ inches; floor space, 33 x 28 inches. Size of oven, 18 x 18 x 12 inches inside measurement.

List No.		Weight Lbs.	*List Price Each
44	Electric Range.....	268	\$112.50

Hughes Range No. 33

This is one of the latest models; is a compact and attractive elevated oven range, at a moderate price. It has a body of heavy gauge steel, black enameled, top of pressed steel, cast legs and door frame, and nickel trimmings. The elevated oven does away with all stooping, a convenience much appreciated by the housewife. It is provided with a broiling pan and rack, and the top burner is utilized as a broiler. The oven is built on the fireless cooker principle, its heavy insulation conserving the heat. Current consumption in rear burner, 880 watts, left hand front burner, 1100 watts and right hand front burner, 1500 watts. The oven has two heating units—one located in the top and the other in the bottom, giving perfect heat distribution and splendid baking results. Current consumption of oven burners is the same as the top burners, viz., 880-440-220 watts. All of the heating units are controlled by separate three-heat switches, from which the indications can be read from any position. This range is built for heavy kitchen duty and is fully guaranteed. Dimensions: From floor to top of oven, 62 inches; cooking surface, 21 x 25½ inches; floor space, 30 x 28 inches. Size of oven, 18 x 12 x 12 inches inside measurement.

Western Electric

JUNIOR NO. 6

Junior Range No. 6

Western Electric

Junior No. 6

An Electrical Range for Children

The Junior range No. 6 is a practical, electric range in which cooking and baking can actually be done by children. It is an entirely new idea that has already proved remarkably popular. Its main feature is not only the pleasure it gives children, but it is invaluable also as an educator.

The Junior range is absolutely safe. Mothers may permit their children to use it freely without thought of danger.

For countless generations little girls have had to be content with the toy ranges in which no cooking could be done.

The construction of the Junior is substantial and is high grade throughout. It is guaranteed for one year, and with any kind of care will last for many years. It may be attached to any lamp socket, and consumes less current than an electric flatiron.

With every Junior range is furnished, free, a set of four nickel plated cooking utensils (tea-kettle, baking pan, stewpan and pot) and a cook book in words that children can understand.

Details

Height to top of shelf, 15 inches. Cooking surface, $11\frac{1}{4} \times 8$ inches. Inside dimensions of oven, $4\frac{1}{2}$ inches wide, $2\frac{1}{4}$ inches high, 5 inches deep. Number of burners, 6. Net weight, $7\frac{1}{2}$ lbs. Current consumption, 500 watts.

Finished in black enamel with nickel-plated top, legs and oven door front.

ELECTRIC OVENS

Bake Ovens

No. 150

Hughes Electric Bake Ovens

are proven to give better results than fuel ovens. Especially adapted for hotels, bakeries, they are clean and compact, and have the advantage of perfect control of the heat supply. They insulated and radiate practically no heat. They occupy about one-fifth of the space required of the same capacity. In these ovens there is an absolutely ideal heat distribution. The heating elements in the bottom and depending on an uncertain and variable circulation of heat are distributed for even baking through all parts of the article being cooked. In these ovens the heat is perfectly controlled, correctly applied and more uniform than in any other type in use, and brick ovens. The body of these ovens rests on a substantial angle iron frame. The outer door is iron. The inside, which is entirely separate, is black steel. Won't it pay to eliminate the fumes of gas from your baking process, heat at the throw of a switch, heat that you want you are through, heat that is positively uniform and perfectly distributed, bake scientifically and without attention.

With tile decks have a 7 inch clearance, instead of 8 inch, unless ordered specially.

meter can be supplied at an extra price of \$15 net.

Also be used for roasting meats, poultry, etc. Also for baking cores and any other work

special ovens for enameling and other purposes.

Factory, Chicago, Ill. For warehouse deliveries write nearest house.

HUGHES ELECTRIC TOASTER

Hotel Type Electric T

Hughes Hotel Type El

This toaster is an entirely practical electrical toaster, where large quantities of good toasts are needed quickly. It has two trays, one above and one below, so that 16 slices can be toasted simultaneously. Then the trays are interchanged and the top tray is toasted on the lower side. No heat is wasted. Only one operation is required. Every slice is toasted on both sides. This toaster goes anywhere—kitchen, butler's pantry or dining room. It is turned off again when you are through. Finished in nickel plate, it measures 8 inches by 18½ inches. Outside dimensions, 9 inches by 19½ inches. Maximum current consumption is 2 K.W.

List No.

380313

Hotel Type Electric Toaster.....

Electric Plate W

Hughes Electric P

The Hughes Electric Plate and Food Warmer effectively warms plates and food in a restaurant. It requires but little space and has a simple and elaborate system of piping, it can be placed anywhere and in any size desired. There are two standard sizes, the specifications are as follows:

- No. 1. 35 inches wide, 30 inches high and 18 inches deep
- No. 2. 25 inches wide, 41 inches high and 19 inches deep

The maximum current consumption is 1500 watts on high. The heating units are located in the bottom. The construction is rigidly braced in the center.

SUNBEAM INCANDESCENT LAMPS

Sunbeam Lamp Carton

How to Order

In order to facilitate the execution of orders and to avoid misinterpretation we would request that the following facts be stated clearly on each order.

Quantity

Always state the number of lamps desired. When ordering lamps, one should bear in mind the fact that we carry a large stock of lamps in standard package quantities, and order for less than standard package quantities incurs delays and needless expense on account of repacking, which necessarily has to be done in order to supply other than standard quantity. Whenever it becomes necessary to order special lamps, we reserve the right to fill all such orders either short or in excess of the exact quantity ordered within the limits of 10 per cent. This is necessary on account of the fact that it is impossible to always produce an exact quantity of any special lamp.

Size of Lamps

Always state in watts whether 40 watt, 60 watt, etc., size is desired. In ordering street series lamps, however, give amperes and candle power.

Class

Always state whether Mazda, Gem, etc., class lamp is desired.

Circuit Voltage

Always give voltage at the lamp socket of the circuit on which the lamp is to be used.

Style and Size of Bulb

Always state, for example, whether S-19, G-25, etc., is the style desired.

Finish of Bulb

Always state whether clear, bowl frosted, or all frosted lamp is desired. If colored lamps are to be ordered, state color and whether lamps are to be superficially colored or made of natural colored glass.

Style of Base

In ordering always state, for example, Style 100, for medium screw sockets; Style 400, for Mogul screw sockets, etc. If a lamp is scheduled as being supplied with either skirted or unskirted base, the order should distinctly specify which is desired.

Western Electric

SUNBEAM INCANDESCENT LAMPS

Standard Bases

Bases

The prices in each schedule cover only lamps fitted with the base or bases stated therein. The price of lamps fitted with other bases may be obtained on application.

Lamps regularly fitted with Medium Screw Unskirted Base, if fitted with Medium Screw Skirted Base, will take an additional charge of 20 cents to list prices.

There shall be no reduction in the price of lamps which are regularly based when furnished unbased.

Instructions

Special Styles

We can furnish headlight, resistance, telephone switchboard, navy, torpedo, battery inspection, diving, Fisk instrument, gun, scarf pin, midget base, optical, surgical and dental lamps, in fact any special type in addition to the standard styles listed in this bulletin.

Extra Charges

All extra percentage charges shall be figured on the basic list price of the clear lamps.

Tipless Lamps

The prices given cover lamps with a tip unless otherwise indicated; for tipless lamps the additional charge is 10% on Gem and 20% on Mazda.

For anchoring filaments to the bulb in Gem lamps, except in the case of such lamps as are regularly standardized with bulb anchored filaments, an additional charge of 6 cents list price for each anchor shall be made.

Frosted Lamps

The prices for frosted lamps cover only lamps either bowl frosted or all frosted, except where Bull's-Eye frosting is specifically mentioned. The prices of any lamps with special frosting may be obtained on application.

Colored Lamps

For superficial coloring, excepting opal, add 15 per cent. to list price of clear lamps. For superficial opal coloring (opal dipping) a lamp, the list additional charge to the price of the lamp is the same as the list additional charge for frosting the lamp. When 10,000 or more of any one color of superficially colored lamps, or 10,000 or more frosted lamps (not including a combination of the two) are ordered at one time, the additional charges are two-thirds the regular charges. For natural colored lamps add the following percentage charges to the price of clear lamps:

	Gem and Mazda Lamps (Except S-14 and G-16½ bulbs)	Mazda and Gem S-14 and G-16½ bulbs
Green-Blue	50%	25%
Purple	75%	35%
Ruby-Opal	100%	50%
Amber-Canary	150%	60%

Etching Letters

The following charges for etching letters or designs on lamps are net and subject to no discount.

Class of Lamp	Size in Watts (For Street Series Lamps, Size in Candlepower)	Net Price of Etching per Lamp
Mazda	50 or less	¼c
Mazda	Over 50, to and including 80	¾c
Mazda	Over 80, to and including 150	1 c
Mazda	Over 150, to and including 250	1½c
Mazda	Over 250	1¾c
Gem	All sizes	¾c

Street-Series Lamps

Mazda Street-Series lamps are designed for use on constant-current circuits, either in series with arc lamps or in straight Mazda systems. Mazda street-lighting systems are characterized by pleasing uniformity of illumination and freedom from flicker, excessive glare and long shadows. Their decorative value alone has done much to bring them into popular favor.

MAZDA, STREET-SERIES STYLE

Fitted with Mogul screw base (Style 400). Medium screw skirted base (Style 100) also supplied at same price, except the 400, 600 and 1000 C.P. lamps, which are supplied only with Mogul screw skirted or unskirted base (Style 400) as indicated.

All the lamps listed above are selected for amperes and power ratings of 575, 600, 625 and 650 watts.

Mazda Train-Lighting and

The round-bulb lamps designated in the table below are selected for amperes and power ratings of 575, 600, 625 and 650 watts. Owing to the limited current supply, high efficiency is preferred.

The straight-sided lamps may be used for low-voltage compensator circuits.

*The first six of the low current types have a cold resistance not to exceed 111 per cent. of the hot resistance, while in the last two types it does not exceed 25 per cent. The hot resistance of the high current types is one-half of the cold.

Lamps will be furnished in T-14 bulb unless order specifies otherwise. Maximum over all length of T-10 bulb, 5 1/2 inches, diameter 1 1/4 inches; T-14 bulb, 6 1/2 inches, diameter 1 3/4 inches.

Standard package quantity not less than 100 lamps of one kind or assorted.

COLOR CAPS

Half and Full Cap

or caps are used by all reliable sign manufacturers because they are absolutely method of coloring an electric sign. One equipment is the only expenditure, do not fade or wear out.

• "A" caps are usually preferable for large roof signs or permanent displays, reduce the color effect by reflection without "killing" the light.

• Use "A" Caps. Color face of letter or design same color as the caps to Use gloss paint. As some bulbs are imperfect, turn caps around until lamps firmly.

• to Use "B" Caps. These can be used, like colored lamps, on any color and. They are especially adaptable for frequent color changes or where a r is required. We recommend them for street decorating, window displays, elevator signals, stage lighting effects, etc.

THE PHOTOLITE

The Photolite is a complete lighting unit for the photographic studio. It comprises a blue bulb 1000 watt Western Electric Sunbeam Mazda Lamp, an Ivanhoe Steel Reflector with holder, a neat, substantially built iron stand and supports for a diffusing screen.

The stand is 8 feet 10 inches high. It is completely wired and provided with a switch. Being mounted on casters it can be moved easily to any part of the studio. The lamp and reflector are adjusted by means of a sliding bar between the two upright guide rods, a pulley and a counterweight. A knuckle joint permits the lamp and reflector being tilted out of the vertical plane. The steel reflector is light, strong and durable. It is finished in porcelain enamel. It affords a large measure of control in utilization of light.

The following table shows the operating conditions under which good results have been secured with the Photolite as the only source of illumination and with plates of medium speed.

Number of Photolites	Lens	Stop	Background	Time	Subject

Permacolor

Franco

Permacolor Colors

Semi-Weatherproof

Permacolor is used where a coloring is desired to last several weeks outdoors or somewhat longer than the cheaper coloring indoors. The coloring will stand considerable rough usage without injury and can be removed readily with wood alcohol when desired. A transparent, hard, glossy coating that dries in a few minutes and made especially to stand the wear and tear of the elements for 60 or 90 days.

List No.		List Price per Doz.
00342	Permacolor (semi-weatherproof) 1/2 pint bottles	\$15.00
00343	Permacolor (semi-weatherproof) pint bottles	25.00
00344	Permacolor (semi-weatherproof) quart bottles	45.00

Furnished in ruby, blue, red, green, moonlight, amber, pink, canary, purple, and white opal.

NOTE: A dipping cup is furnished with every 1/2 pint, 1 pint and quart bottles.

Cefco Weatherproof Lamp Coloring

A clear incandescent lamp dipped in Cefco will outlive a natural colored lamp. It dries without current in 3 days.

List No.		List Price Each
100345	Cefco (weatherproof) 7 oz. cans	\$1.88
100346	Cefco (weatherproof) 15 oz. cans	3.14

Incandescent Lamps

G. E. ALL-NITE-LITE TRANSFORMERS

All-Nite-Lite Transformers

The function of the device listed below is to transform the normal supply voltage to approximately six volts, making it applicable to a low energy consuming miniature Tungsten lamp. The device operates on an alternating current supply circuit ranging in voltage from 100 to 125 and in frequency from 50 to 140 cycles by simply screwing it into the standard lamp socket in place of the usual incandescent lamp.

The complete device consists of a miniature transformer contained within an attractively polished brass shell, and a miniature Tungsten lamp. The transformer, although miniature in design, is constructed with primary and secondary coils, liberally insulated and with a core built of the highest grade of transformer steel punchings. The receptacle for containing the lamp is designed to fit a standard bayonet base lamp rated approximately two candle power, six volts, with a maximum energy consumption of two and one-half watts, the lamp being the same as used for lighting purposes on automobiles. The energy consumed by the transformer, combined with that of the lamp, never exceeds three and one-half watts, which is considerably below any present arrangement for all night electric illumination.

This device operates so inexpensively that it can be afforded by all. As an example, assume the average cost of electricity at 10 cents per kilowatt, and the device in operation ten hours a night. With its small energy consumption, mentioned above, the cost per night would be less than four-tenths of a cent.

Application. For use in the all-night illumination of such places as hospital rooms, door fronts, cellars, stairways, halls, bathrooms, rooms in which babies or sick members of the household have to be attended, etc. For these applications, in addition to telephone booths, closets and other places where a small energy consuming light is desired, the Nite-Lite Transformer adequately answers all of the requirements, and is a convenience fully realized when tried.

List No.		Volts	Frequency	List Price Each
190896	All-Nite-Lite Transformer	100-125	50-140 cycle	\$2.20

Use 6 volt, 2 C.P. Bayonet Base Mazda lamp. Prices do not include miniature lamp.

ELECTRIC STAGE LIGHTING APPARATUS

Open Box Arc Lamp

Lens Box Arc Lamp

No. 1050 Arc Lamp

List No. 25
Metal Color Box

Olivette or Open Box Arc Lamp

This lamp is especially designed and adapted for use in the wings to throw an equally spread light of 4000 C. P. on the scene of the play and will illuminate an area of 40 feet.

It consists of a hand feed arc lamp for direct or alternating current, sheet iron hood with screen door, provided with grooves for color slides, wrought iron telescopic stand, on which the light can be raised or lowered to any required height. An enclosed rheostat is fastened on the bottom of the stand, and is wound for 110-volt current, and is furnished with an enclosed knife switch with extra removable base, asbestos wire from rheostat to hood, and 25 feet No. 10 approved stage cable.

Theatrical and Lighting Specialties

ELECTRIC STAGE LIGHTING APPARATUS

Baby Spot Light

List No. 60
Baby Spot Light

The Baby Spot Light is a device for throwing light without using an arc lamp. It gives a mild ray of light to represent sun rays or a beam of light from a fireplace, to illuminate a performer with a strong center light, fading out at the ends. It consists of a wrought iron telescopic stand on which the light can be raised and lowered with a Russian iron hood fitted with an Edison Base Receptacle 300 W Stereopticon Lamp, with concentrated filament, is generally used. This lamp is adjustable in the hood, in the center of a 5 inch lens, which is in the front of the hood. The rear of the hood is provided with a door. The hood is lightproof and well ventilated and is provided with grooves for color slides. 25 feet of No. 14 approved stage cable is included in the price. A small dimmer is fastened on the stand to control the power of the light.

Long Distance Spot Light

Approved and listed by the Underwriters' National Electrical Association

The new style lamp, List No. 9, is superior to any other spot light for light throwing at long distances. It is designed to give a 3 foot spot at a distance of 100 feet as well as a 20 foot spread.

This lamp is neat in appearance, efficient and compact in construction. The hood is made of Russian iron with aluminum front and rear, with large side door on spring hinges, and grooves for color slides or color wheel.

It carries a special arc lamp focusing frame for quick focus, which is controlled by rear wood knob, allowing the operator to change quickly from spot to flood or vice versa without unscrewing set screws or handle. The arc lamp burner is handfeed for A. C. or D. C. current, and is operated by wood knob under hood. The lens used is 6 inches in diameter of a special focus. The hood is well ventilated and thoroughly light-tight, and is fastened by swinging attachment to a telescopic iron stand with enclosed rheostat, detachable switch, asbestos wire and 25 feet approved stage cable.

THEATER DIMMERS

CR 9301

CR 9302

Single Plate Dimmers

Wall Type

In small theaters, lodge rooms, clubs, etc., where only a few lights are to be controlled, we recommend the use of wall type dimmers which occupy small space and are very readily mounted flat against the wall or at right angles to it. These are known as types CR-9301 and CR-9302 respectively.

Although dimmers of 60 to 100 lights capacity require two plates, both plates are operated simultaneously by the same lever.

Prices for these dimmers will be found on page that follows.

CR 9303

CR 9331

Fifty Step Bank Construction

The non-interlocking and interlocking theater dimmers are so designed that they will meet all requirements for stage and auditorium lighting.

The plates are supported in an iron frame and so grouped that they occupy a minimum of space. The contacts have liberal area and the contact shoes are so designed that excellent electrical connection is obtained and, at the same time, the operation is rendered noiseless.

The switch arms are rotated by gears and pinions and controlled by individual levers which have a movement of 70 degrees to produce full dimming.

Non-interlocking dimmers are so arranged that each plate is operated by an individual lever.

Interlocking dimmer plates may be operated separately or may be operated in groups by one or more master levers.

One hundred step dimmers are recommended for Mazda or metallic filament lamps.

Prices for CR-9303, 9304, 9321 and 9323, fifty step dimmers, will be found on pages that follow.

One Hundred Step Bank

Construction for Mazda Lamps

The application of Mazda lamps to theater lighting has made it desirable to have a dimmer with a larger number of regulating points than are now included with the standard carbon lamp dimmer which has been in use for a number of years. Each plate in the carbon lamp dimmer has 50 steps, while the new plate for Mazda lamp has 100 steps. When the 50 step dimmer is used with Mazda lamps, it is possible to detect the change in illumination or, in other words, the lamps flicker when passing from step to step. Therefore, 100 steps are used.

The construction of the 100 step dimmer is the same as the 50 step dimmer except that an additional inner row of buttons has been placed on each 100 step plate.

The plunger brush contact shoes render operation just as noiseless as with the 50 step dimmer.

One hundred step dimmers are supplied either non-interlocking or interlocking.

Prices on CR-9313, 9314, 9331 and 9332 one hundred step dimmers will be found on pages that follow.

Methods of Mounting Theater Dimmers (Rod Drive)

Ordering Directions

When ordering theater dimmers, the following information should be given:

1. Voltage of circuit.
2. Is system two or three wire?
3. Number of circuits.
4. Number of lights per circuit.
5. Type and candle power of lamps. If metallic filament, give number of watts per lamp.
6. Is dimmer to be interlocking or non-interlocking?
7. If dimmer is to be interlocking, how many master levers are desired? Give sketch showing grouping and arrangement of plates to be controlled by each master.
8. Figures 1 to 10 inclusive cover the simpler methods of arrangement of plates—state which arrangement you want.
9. Are 50 or 100 step dimmers desired?
10. Very important that you give dimensions of available space.
11. Dimmers varying in construction from Fig. 1 to 10 inclusive should be accompanied with complete details, and sketch showing arrangement required. Number and grouping of plates, master levers, and masters, operating levers, etc.

METAL CASE TIME SWITCHES

Door Open

Door Closed

Hartford Time Switches

This is a device by which electric current is automatically turned on and off at such times with no further attention than the weekly winding.

It consists of a high-grade Seth Thomas marine clock movement, and a Standard Switch, so that each in its operation is independent of the other. This permits of perfect regulation of and assures accuracy of operation.

The switching mechanism is positive in operation; in the lower capacity-switches, it being grade rotary switch, and in the larger capacity, a high-grade standard knife switch.

The mechanism is enclosed in a dust and weatherproof japanned iron case supplied with Treasury lock and rubber gasketed door.

STANDARD TYPES

Type "B"—Throws the current on and off once each day, seven days per week.

Type "C"—The same as type "B," excepting that it automatically disconnects the switch one week, designed to omit Sunday operation.

Type "D"—Similar to type "B," but arranged to throw light on and off two periods each day (requires winding twice a week).

Type "E"—Two rate meter service control.

Type "C"—Designed to control apartment house lighting.

All switches are provided with hand trip, by which the switch can be tripped independently and are also, with the exception of Type "C," equipped with a cut-out, permitting the disc of the clock and switch, without stopping the clock.

Dimension—The enclosing cast-iron case up to 50 amperes, Double Pole, measures approximately 7 1/2 inches high, 7 1/2 inches wide, 3 1/4 inches deep.

SMALL TYPE

For use on circuits up to 250 V.—A. C. or D. C.

Description	List Price Each—		
	Type B	Type C & D	Type E

TIME SWITCHES

G. L. Time Switch

Mesco Time Switch

G. L. Time Switch Clock

The clock has an attachment by which electric lights can be automatically turned on at any predetermined time the user may desire and turned off at a fixed time without requiring the services of an attendant.

List No. 410438 G. L. Time Switch Clock.....^{*List Price Each} \$23.00

The Mesco Time Switch

For Window Lights, Signs, Etc.

This is a simple and most reliable time switch; it requires no metal box or cabinet. Just wind the clock, switch on lights and they will be thrown off automatically at the time for which the alarm is set.

List No. 16450 For throwing off lights only, 10 ampere, 250 volts, double pole.....^{††List Price} \$13.60

Type A

Type B

Crescent Time Switches

Type "A"

The type "A" time switch is a simple, inexpensive device for turning off electric lights at a predetermined time.

List No.		^{*List Price Each}
410308	Two pole, 25 amperes 220 volts.....	\$15.00
410309	Two pole, 50 amperes 220 volts.....	18.75
410310	Two pole, 75 amperes 220 volts.....	22.50
410311	Three pole, 25 amperes 220 volts.....	18.00
410312	Three pole, 50 amperes 220 volts.....	21.00
410313	Three pole, 75 amperes 220 volts.....	24.00

Type "B"

The type "B" time switch is made on the same plan as type "A" except that it has two time movements: one for turning on the current and the other for throwing it off.

List No.		^{*List Price Each}
410314	Two pole, 25 amperes 220 volts.....	\$24.00
410315	Two pole, 50 amperes 220 volts.....	27.00
410316	Two pole, 75 amperes 220 volts.....	28.50
410317	Three pole, 25 amperes 220 volts.....	25.50
410318	Three pole, 50 amperes 220 volts.....	28.50
410319	Three pole, 75 amperes 220 volts.....	31.50

The Crescent time switches when used in connection with approved iron box meet all underwriters' requirements.

Prices quoted on application.

Add \$3.20 list for each additional switch.

Capacity, 10 Amperes per Switch, 110 Volts

L3-10	3	19 x 13 x 11 ins.	48 lbs.	\$60.80	\$67.20	\$7.20
-------	---	-------------------	---------	---------	---------	--------

Add \$4.80 list for each additional switch.

If above are furnished for 3-wire service add \$3.20 to list.

Script Type

Reco Script Type

Invisible handwriting effects in script letter signs, perfectly reproduced, also used in rockets, vines, trailers, etc. Built single, double or triple deck to meet space requirements. Approved by the National Board of Fire Underwriters.

Capacity, 1 Ampere per Switch, 110 Volts

List No.	No. of Switches	Size	Shipping Weight	*List Price Each		Steel Cabinet Only
				With D. C. Motor	With A. C. Motor	
10-1	10	20 x 13 x 11 ins.	60 lbs.	\$68.00	\$74.40	\$9.60
20-1	20	28 x 13 x 11 ins.	68 lbs.	80.00	86.40	11.20

Add \$1.20 list for each additional switch.

If above are furnished for 3-wire service add \$3.20 to list.

Chaser Type

Reco Chaser Type

The type of flasher used for "crawling snakes," jumping rabbits, etc., wherever one animate object chases another around the border of a sign. This illusion is accomplished by wiring each opposite lamp in the sign on one wire, making half the number of circuits as there are lamps in the border.

Capacity, 1½ Amperes per Switch, 110 Volts

List No.	No. of Switches	Size	Shipping Weight	*List Price Each		Steel Cabinet Only
				With D. C. Motor	With A. C. Motor	
15-1½	15	26 x 13 x 11 ins.	63 lbs.	\$76.80	\$83.20	\$8.80
20-1½	20	29 x 13 x 11 ins.	68 lbs.	84.80	91.20	9.60

Add \$1.60 list for each additional switch.

NOTE: When ordering, specify how sign is to flash, number of changes desired (the number of flasher switches is governed by the number of changes), number of lamps in each change (the size of switch is governed by the ampere load), if two or three wire service, if D.C., the voltage; if A.C., the voltage and cycles.

If above are furnished for 3-wire service add \$3.20 to list.

*Delivery F. O. B. Factory, Chicago, Ill. For warehouse deliveries write nearest house.

ELECTRIC SIGN FLASHERS

No. 1-201 With Cabinet

Betts Sign Flashers

These flashers are made to produce any known flashing effect. Every contact is equipped with an interchangeable contact sector, permitting time adjustments or complete flashing changes. These sectors, in connection with the interchangeable brush holders, make it comparatively easy to completely rebuild the flasher for different effects. Guaranteed two years and approved by the National Board of Fire Underwriters.

Betts On and Off or Spelling Type

These machines are used to flash one or more circuits, such as, a whole sign on and off, varied color effects, spelling a word, etc.

INSTRUCTIONS FOR ORDERING

- 1st. Number and candle power of lamps to be controlled by each switch.
- 2d. Whether Mazda (Tungsten) or carbon lamps.
- 3d. If Mazda (Tungsten) lamps whether they are to be used on low voltage transformers.
- 4th. If direct or alternating current. If alternating, the frequency (number of cycles).
- 5th. If two- or three-wire system.
- 6th. Voltage.
- 7th. If design is complicated, give complete description of the sign, and preferably a sketch showing number of lamps for circuit and how they are to be flashed.
- 8th. Shipments: express or freight.

Western Electric
SILK SHADE
PORTABLE LAMPS

Type No. 15

Type No. 25

Type No. 35
Portable Mahogany Lamps

The stands of these lamps are of solid mahogany, well finished and of selected stock. Each lamp is fitted with $\frac{1}{8}$ inch iron pipe from top to bottom, which insures the socket always being tight. It also prevents the wooden shaft from warping.

The shades are of one layer of heavy silk poplin and are trimmed with metal galloon of popular width and design. These shades can be furnished in any of the following four colors: gold, old rose, Nile green and pink. They are made on tinned wire frames and all joints soldered, and all wires are wrapped in the same color of material as the shade.

Type No. 15. This is a desk or boudoir lamp equipped with one pull chain socket, six feet of silk parallel cord and attachment plug. The total height of the lamp and shade is 15 inches and the diameter of base is 5 inches. The diameter of the shade is 8 inches, and a spring fixture to fit over the lamp bulb is included.

Type No. 25. This is a table lamp, equipped with one pull chain socket, six feet of silk parallel cord and attachment plug. The total height of the lamp and shade is 19 inches and the diameter of base is $6\frac{1}{2}$ inches. The diameter of the shade is 14 inches, and a spring fixture to fit over the lamp bulb is included. It may be used as a reading lamp when equipped with a 40 watt tungsten lamp.

Type No. 35. This is a library lamp equipped with two pull chain sockets, six feet of silk parallel cord and attachment plug. The total height of the lamp and shade is 26 inches and the diameter of base is 8 inches. The diameter of the shade is 18 inches. The shade attaches solidly to the cluster box on top of the lamp and is held in place by a brass knob.

IVANHOE PORTABLES

No. 0502

No. 0500

No. 0501

Desk Portables.

No. 0500 is a convertible portable changed from horizontal to vertical by removing the stem from the base. The stem will rotate to any position around the base and it has a friction adjustment to any angle at the socket. No. 0500 may be used for desk lighting—flat or roll top.

No. 0501 has an adjustable hinge connection between the stem and base, and a friction adjustment at the socket, which permits the use of the stem and reflector at any angle. Tubing and base are round. For desk and reading table lighting.

No. 0502 is an adjustable portable with friction adjustment top and bottom for use at any angle. Tubing and base square. An attractive home unit.

LIGHTING SPECIALTIES

The True Comfy Light

This light is made of brush brass beautifully finished. The inside of the shade is aluminum finish and reflects a clear, soft light. The clip or holder is made of heavy spring wire and in an instant can be fastened to any projecting surface from $\frac{1}{8}$ to $2\frac{1}{2}$ inches in thickness. The grip is rubber covered and will hold to a polished surface without scratching it.

The special socket supplied with this light is made to fit all screw sockets intended for use with the ordinary incandescent bulbs.

The shade of this lamp will revolve, can be moved up and down and the light may be adjusted to any angle. The eight foot silk cord furnished with every light permits a wide range of uses. The lamp may be carried into closets, into vaults, or into the remotest corners of the home or office, can be used in the sick room, on the summer porch, in the garage, in fact it is always available wherever electricity is used.

List No.		List Price Each
42	The True Comfy Light.....	\$2.50

Adapt-A-Lite

Adapt-A-Lite
Ball and Socket

The Adapt-A-Lite

The Adapt-A-Lite is an electric lighting appliance consisting of a handsomely finished brass ball, containing a winding mechanism and a drum, with a capacity of 10 feet of insulated lamp cord. This light stays "put" at any fraction of the cord length, and a slight pull operating the release draws the cord gently into the device and lands the lamp without jar. The lamp does not revolve, nor does the cord twist during the winding operation. The device screws into the fixture socket in place of lamp, and there it conveniently remains, instantly available whenever an emergency demands a portable light. In addition to the portable equipment each Adapt-A-Lite is furnished with a metal shade and universal clamp which furnishes a support for the lamp and provides means for hanging from the side walls, frame of the bed or allows it to be clamped to the outer edge of desk or table when the cord is extended. By manipulating the shade the eye can be shielded from lamp glare as the light may be thrown in any desired direction. The Adapt-A-Lite may be attached to any socket. It is always in place and after momentary use need not be stored in some out-of-the-way place.

	List Price Each
Adapt-A-Lite clamp socket and shade, brush brass finish.....	\$7.00
Note: The price of the Adapt-A-Lite is less lamp.

BENJAMIN FIXTURES

No. 700C

No. 716C

No. 728C

No. 740C

Fixtures for Type C High Efficiency Mazda Lamps

Fixtures Nos. 700C-736C include ventilated hoods and holders of material as listed, stalactite globe of proper density, two-piece easy-wire porcelain socket with lamp grip. Flange secures parts of hood so that support of fixture does not depend on socket or wires. Fittings are regularly supplied for $\frac{1}{2}$ inch pipe; $\frac{3}{8}$ inch may be ordered without change in price.

List No.	Description	Size of Globe, In.	Size of Lamp, Watts	Price Each
700C	Copper, natural finish	8 x 6	†200	\$4.65
702C	Copper, black enamel	8 x 6	†200	4.95
704C	Brass, brush brass finish	8 x 6	†200	4.80
706C	Steel, black enamel finish	8 x 6	†200	3.30
708C	Copper, natural finish	8 x 6	300, 400, 500	4.80
710C	Copper, black enamel	8 x 6	300, 400, 500	4.95
712C	Brass, brush brass finish	8 x 6	300, 400, 500	5.10
714C	Steel, black enamel finish	8 x 6	300, 400, 500	3.46
730C	Copper, natural finish	10 x 8	750, 1000	7.65
732C	Copper, black enamel	10 x 8	750, 1000	7.95
734C	Brass, brush brass finish	10 x 8	750, 1000	7.80
736C	Steel, black enamel finish	10 x 8	750, 1000	5.40

Overall lengths: 200 and 300 watt sizes, 12 inches; 400 and 500 watt sizes, $13\frac{1}{4}$ inches; 750 and 1000 watt sizes, $15\frac{1}{4}$ inches.

Chain Suspensions

716C	Brass, brush brass finish	8 x 6	†200	\$6.45
718C	Brass, brush brass finish	8 x 6	300, 400, 500	6.90
719C	Brass, brush brass finish	10 x 8	750, 1000	9.45

Overall lengths: No. 716C, 26 inches; No. 718C, 27 inches; No. 719C, 29 inches.

†300 watt medium screw base lamps may be used.

Prices are less wires and lamps.

Fixtures with Chain Suspension

Fixtures Nos. 727C-728C consist of solid brass ventilated hoods and 8 inch holder, opal globe of proper density, brass chain support, canopy and crowfoot. Hood tapped to $\frac{1}{4}$ inch and chain loops are drilled to take No. 14 asbestos covered cord. Overall length, 33 inches. Standard finish, brush brass. Porcelain Mogul Easy-wire Sockets are equipped with lamp grip. Prices are less wires and lamps.

727C	With brush brass hood	10 x 8	400, 500	\$8.70
728C	With brush brass hood	12 x 8	750, 1000	9.30

Semi-indirect Fixtures

Fixtures Nos. 740C-742C consist of brass hood and 6 inch holder, 16 inch opal dome reflector and 8 inch diffuser, brass chain support, canopy and crowfoot. Chain loops are drilled to take No. 14 asbestos covered cord. A 16 inch upper opal reflector aids in downward reflection, while an 8 inch small inner globe diffuses the direct light rays which would otherwise injure the eyes. The porcelain sockets furnished are equipped with lamp grip. Prices are less wires and lamps.

List No.	Description	Size of Lamp, Watts	Price Each
740C	With brush brass hood	†200	\$11.55
742C	With brush brass hood	*300, 400, 500	12.00

*Mogul base. †300 watt medium screw base lamps may be used.

BENJAMIN LIGHTING FIXTURES

No. 6157

No. 6049

No. 6103

Fixtures for "Type C" Mazda Lamps

Schedule "2"

Fixtures 6153-6158 have holders and hoods as follows: (1) copper, black finish; (2) steel, heavily copper plated, statuary bronze finish; (3) brush brass. Fixture support is independent of socket. The alabaster globe offers good diffusion, and has ventilating opening in the bottom. The method of hooding protects the lamp against rain and snow. Socket with lamp grip is regularly supplied. Copper and steel hoods are tapped for $\frac{1}{2}$ inch, brass hoods for $\frac{3}{8}$ inch pipe, but $\frac{1}{2}$ inch may be ordered without change in price. For grooved copper collar, equalizing pressure between globe and set screws, add 48 cents list. For fixtures less 10 x 8 inch globe, deduct \$3.00 list; for fixtures less 12 x 8 inch globe, deduct \$3.60 list. Prices are less lamps.

Fixtures 6100-6104 are substantially those described above with suspension fitting No. 6031 ($\frac{1}{2}$ inch) added. For fitting No. 6049 ($\frac{1}{2}$ inch) instead, add 18 cents list; for 20 inch enameled steel reflector No. 6109, add \$3.60 list. Standard finish is black.

List No.

	Lamp Size	List Price
6153 With copper hood, globe size 10 x 8 ins.	400 to 500 watts	\$7.80
6154 With steel hood, copper plated, globe size 10 x 8 ins.	400 to 500 watts	6.42
6155 With brush brass hood, globe size 10 x 8 ins.	400 to 500 watts	7.20
6156 With copper hood, globe size 12 x 8 ins.	750 to 1000 watts	8.40

No. 5551

No. 5557

Angle Reflector Fixtures

Schedule "2"

Fixture 5551 has a symmetrical enameled steel reflector adapted for sign board and factory lighting. Height dimensions given include vertical fitting. The latter is regularly supplied tapped $\frac{1}{2}$ inch, but $\frac{3}{4}$ inch or 1 inch may be ordered at an advance of 18 cents list. Corresponding angle fittings may be substituted without change in price. Two-piece lamp grip socket is furnished. Standard finish is black.

List No.	Reflector Height	Diameter	Fitting Size Tapping	Lamp Size	List Price
5551	19 ins.	14 x 20 ins.	$\frac{1}{2}$ in.	400 to 500 watts	\$7.80

Fixtures 5555-5559 have symmetrical enameled steel reflector. In Nos. 5555-5557 the angle is 30° with the vertical, adapting it for the lighting of open areas such as athletic fields, tennis courts, etc. No. 5559 has angle of 20°, adapting it for billboard and factory use. For sockets and fittings see listing above. Standard finish is black.

List No.	Reflector Height	Diameter	Angle with Vertical	Fitting Size Tapping	Lamp Size	List Price

Mill Clusters

Schedule 2

Fixtures 0664-0694 are specially designed for the lighting of mills and factories. Nos. 0664 and 0674 have 24-inch enameled steel concentrating dome reflector, and are intended for use where it is necessary to hang the lighting units sufficiently high to clear traveling cranes; Nos. 0684 and 0694 have 24-inch enameled steel flat cone distributing reflector, for use where the units are suspended from 25 to 30 feet above the floor. Fixtures have either medium screw base or mogul screw base sockets for 250-watt lamps, 8-inch stem of ½-inch iron pipe and weather-proof shock absorber. For fitting with porcelain wire openings (No. 6031) instead of shock absorber add 24 cents list. They are regularly furnished wired multiple for 110-volt circuits, but may be ordered wired series multiple or series for 220-volt circuits, without change in price. For lamp grip described elsewhere, add 48 cents per fixture to list. Iron parts are galvanized. Prices include stem wires but are less lamps.

WITH ENAMELED STEEL BASE
Schedule 2

Fixtures 4300-4308 are ceiling fixtures embodying white enameled steel ring or base, supporting means, and porcelain-lined socket. No insulating joint is required. The base is held by a screw-threaded ring on the outside of the socket shell, thus making it unnecessary for screws to pass through the enamel. Shade holders are covered by white enameled steel cap. Holder screws are nickel-plated. With proper reflectors fixtures therefore present an all-white appearance.

Twelve inch bases have mogul screw base sockets for 400 to 500-watt lamps, and are equipped with special safety holder which securely locks the shade in position; 10 inch bases have medium screw base socket for 40 to 250-watt lamps and have holder with spring clip which prevents loosening and falling. For lamp grip add 12 cents list. Sockets used are National Electrical Code Standard. Prices are less lamps and glassware.

List No.	Description	List Price
4300	12 ins., with 3¼ in. Form "A" Holder and Cover	\$10.80
4302	10 ins., with 2¼ in. Form "O" Holder and Cover	5.10

4308	10 ins., with 3¼ in. Form "H" Holder and Cover	5.40

WITH BRUSHED BRASS BASE
Schedule 2

Fixtures 4310-4312 have brushed brass two-piece base. The upper portion is adapted for attaching directly to the ceiling or to outlet box by any of the usual methods. In the first fixture, socket is attached directly to the upper portion; in the second, the lower portion carrying the socket is attached to the upper by four screws. With 10 inch base, socket shell has screw thread, making it possible to use any of six sizes of holders covering the range of lamps up to 250 watts. For holders only see bottom of page. Other specifications given above apply.

List No.	Description	List Price
4310	12 ins., Mogul Screw Base Socket, 3¼ in. Holder	\$9.60
4312	10 ins., with Medium Screw Base Socket only	3.12

Fixture 4314 is essentially fixture 4312 described above with 8 inch instead of 10 inch base, and is furnished with strap for attaching to outlet box. 40 to 60-watt lamps are recommended.

List No.	Description	List Price

A Method of Attaching

Single Unit Ceiling Fixtures

Schedule 2

Fixtures 361-381 have base with holder, supporting strap, and two-piece medium screw base porcelain receptacle. The latter completely encloses connections making insulating joint unnecessary where approved No. 14 rubber-covered wire is used. Shell may be attached or removed after connections have been made by merely loosening the screws of the top rim. Three methods of attaching are possible: (1) directly to the ceiling or wooden block by means of wood screws; (2) to the ceiling plate, either by a lock-nut to pipe support, or by strap to fixture stud; (3) directly to outlet box, thus taking place of the cover. No. 391 has mogul screw base one-piece receptacle. For lamp grip, add 12 cents list. Sockets used are National Electrical Code Standard. Prices are less lamps and glassware.

List No.	Description	List Price

Lamp Grip

Lamp Grips

The Benjamin Lamp Grip is a device intended to forestall the loosening and falling of lamps. A simple spring means engages the lamp base with sufficient force to hold it in position. It thus prevents loss from breakage, saves the time necessary for re-adjusting, and renders accidents in dangerous quarters where the lamp might strike the workman, impossible. It is of particular value in the industrial field, places exposed to the wind, on steam cars, street cars, steamships, or wherever a lamp socket is subjected to excessive vibration.

Further information on the range of its uses may be found by consulting the different devices in which it is incorporated.

Shock Absorbers

Schedule 4

Shock Absorbers 3340-3353 are designed for the protection of Tungsten lamps against sudden jars or destructive vibrations. They are furnished both with and without canopy support. The former has ¼ inch brass casing, and requires canopy with ¼ inch slip. Absorber with ¼ inch square support may be ordered at an advance of 12 cents list. Springs of different degrees of tension are furnished for fixtures of different weights. Where no weight is specified, spring suitable for 5-pound fixture will be furnished. Prices are less canopy. Iron parts are galvanized.

BENJAMIN LIGHTING SPECIALTIES

No. 2377

Methods of Attaching Fixture

Single Unit Car Fixtures

Schedule 2

Fixtures 2377-2378 are intended for single unit ceiling car fixtures with standard glassware having $2\frac{1}{4}$ inch fitter. Shade is securely held in position by a special safety holder, in which the usual holder screws are replaced by three spring clips, forced into engagement by a cam ring. The latter, in turn, is bolted to the casing. It can therefore not jar loose. A 2-piece porcelain receptacle provided with lamp grip secures the lamp against loosening or falling. As shown in the accompanying diagram, the receptacle may be attached in two ways: (1) to a strap; or (2) directly to the car ceiling. Fixtures for form "O" position are regularly furnished with strap. The form "H" position is secured by omitting strap and using oak base block. Sockets used are National Electrical Code Standard. Prices are less lamps and glassware.

List No.	Description	Std. Pkg.	Wt. Lbs.	List Price Each
2377	Car Fixture, Form "O".....	10	9	\$2.80
2378	Car Fixture, with Oak Base Block, Form "H".....	10	13	3.36

Lighting Fixtures and Accessories

BENJAMIN SPECIALTIES

Lock Guards

PENDENT TYPE

Schedule 2

These guards have a grooved band and eye-bolt for attaching to the head of an enameled steel reflector. The band has a hinged connection, and a catch on the opposite side for holding the guard in position. Padlock may be passed through the rim and eye-bolt for locking. Lock nut on the bolt furnishes means for attaching ground wire when it is desirable to protect lamps against static currents. These pendent guards cover the entire range of Benjamin standard fixtures with enameled steel reflectors. Their depth is designed with reference to the largest lamps likely to be used. The diameter of the reflector determines the diameter of the guard. Flat cone and bowl type reflectors of the same diameter will take the same size guard.

**No. 1386
Pendent Guard**

List No.	Size Diam.	Size Depth	Std. Pkg.	Wt. Lbs.	List Price

CEILING TYPE

Guards 1350-1360 have hinge adapted for attaching to the ceiling by two wood screws, and a fastening plate opposite the hinge, likewise attached by screws. The plate is designed to receive a loop on the guard, thus providing supporting means. Padlock may be used if desired. When in position, guard renders the attaching screws inaccessible; released, it swings clear of the fixture, making it easy to clean or change lamps. Wire parts are of strong steel, tinned after welding. Fittings are galvanized. Guards with dagger (†) are furnished on special order only, and require two weeks' notice. Prices are less brass padlock shown.

**No. 1356
Ceiling Guard**

BENJAMIN LIGHTING SPECIALTIES

Adjustolites

Schedule 2

NATIONAL ELECTRICAL CODE STANDARD

Diagrams as they appear on respective reflectors showing positioning feature with lamp wattage and distribution. "E", Extensive, "I", Intensive.

No. 6162

Fixtures 6160-6164 have deep bowl enameled steel reflector detachably connected—by means of a reliable bayonet snap lock—with a brass cylinder which telescopes the socket shell, and No. 89 two-piece receptacle. Three reflectors cover a range of lamps from 25 to 250 watts. For the purpose of adjustment the cylinder is slotted on opposite sides for the passage of clamping screws carried by the socket shell. This result is brought about by merely loosening two screws and sliding the reflector to one of the three positions indicated, and again setting the screws. No change is necessary in the socket or wire. Three sizes of reflectors are furnished: 7-inch for 25 to 60-watt, extensive, and 25 to 40-watt, intensive; 9-inch for 60 to 150-watt, extensive, and 40 to 100-watt, intensive; 11-inch for 100 to 250-watt, extensive, and 60 to 100-watt, intensive. For lamp grip described elsewhere, add 12 cents to list. Standard finish is white enamel with blue bead.

For fixture with 12-inch stem of $\frac{5}{8}$ -inch brass tubing, 5-inch x 4-inch canopy, and crowfoot, add 98 cents list; with stem of $\frac{3}{4}$ -inch iron pipe and $\frac{3}{4}$ -inch brass casing instead of $\frac{5}{8}$ -inch brass tubing, add \$1.20 list; for shock absorber instead of crowfoot, add 54 cents list; for 12-inch stem of $\frac{3}{4}$ -inch iron pipe and shock absorber, add 60 cents list. Iron parts are galvanized.

Nos. 4204 and 4207 Benco porcelain-lined sockets and Nos. 4328, 4332 and 4334 Benjamin Unit-Shell sockets for use with the above reflectors are listed on preceding pages.

Standard finish on above reflectors is green outside. Holders have natural finish and are furnished as follows: Types B and C, brass; Types N, P and S, copper.

CUTTER SOL-LUX INDUSTRIAL LIGHTING REFLECTORS

The Cutter line of Sol-lux Industrial Reflectors reaches the highest degree of perfection in lighting efficiency and reflector quality. It covers all sizes of incandescent lamps and meets engineering demands in its various light distributions. It embraces all the best holders, carefully selected from present standards.

By a judicious selection of Cutter reflectors and with correct spacing and mounting height, lighting conditions nearest approaching sunlight may be obtained at minimum cost. Our engineering department will assist in planning lighting systems. This service is given without charge.

MFR. No. KEY

Mfr. Nos. on reflectors consist of six digits.

The first digit represents finish—2 being used for enam-aluminum, 3 for porcelain enamel.

The second digit represents the holder, 1 being used for snap ring holder, 2 for 2¼ inch standard heel, 3 for 3¼ inch standard heel, 4 for 4 inch standard heel, 5 represents unit socket detachable holder, while 6 represents the solid extension enclosing socket holder.

The third digit represents the distribution—1 representing the extensive curve or Type E, 2 the intensive curve or Type I, 3 the distributing curve or Type D, 4 the angle distribution or Type A, 5 the focusing distribution or Type F.

The last three digits give the lamp size of the reflector, 000 being used for the 1000 watt size.

Example: 213100

- 2 = Enam-aluminum finish.
- 1 = Snap ring holder.
- 3 = Distributing curve distribution.
- 100 = 100 watt Mazda lamp.

REFLECTOR FINISH

Enam-aluminum finish consists of 3 interior and 2 exterior coats. The interior final coat is a washable transparent enamel applied over a highly efficient matte aluminum surface. This gives a surface which will not hold the dust and which can be easily cleaned and brought to its initial efficiency.

Porcelain enamel finish consists of 3 coats, the highest grade porcelain being used. This finish will not deteriorate under normal conditions and can be readily cleaned.

HOLDERS

The holders furnished with Cutter Industrial Reflectors are shown below.

1—Snap Ring Holder

2-3-4—Standard Heel Holder
2¼, 3¼ and 4 Inches

5—Unit Screw Socket
with Lamp Receptacle

6—Solid Extension Holder
with Lamp Receptacle

The holders illustrated above are included in the prices of the reflectors designed with their respective holders.

The snap ring holder is part of the reflector, fitting directly on brass shell sockets. The 2¼ inch standard heel fits in regular 2¼ inch fixture holders. For the 3¼ and 4 inch standard heel holders, we recommend Sol-lux holders listed below. These include the Cutter lamp grip socket, which prevents the lamp loosening under adverse conditions. These are tapped for ½ inch pipe.

3¼ or 4 Inch Sol-lux
Copper Holder

3¼ or 4 Inch Sol-lux
Cast Iron Holder

6 or 8 Inch Sol-lux Copper

HOLDERS FOR IVANHOE METAL REFLECTORS

Catalog Numbering System

The letters and numbers of Mfr. Nos. have the following meaning:
 The letters designate in order:
 1. Type of holder (B, C, D, J, K, R or S).
 Note: Reflectors furnished with the Clip Spring Holder have only two letters in their stock numbers. The first letter gives the finish of the reflector and the second gives the light distribution obtained.
 2. Kind of finish (A, Cleansey aluminum; E, for porcelain enamel).
 3. Distribution of light (E, extensive; I, intensive; F, focusing; D, distributing, and L, angle).
 The number gives the size of the Masda lamp with which the reflector should be used to obtain the best results.
 Example—No. RED 60. R=Solid extension holder. E=Porcelain enamel finish. D=Distributing light distribution. 60=Size of Masda lamp to be used.
 Example—No. AE 60. Clip Spring Holder. A=Cleansey aluminum finish. E=Extensive light distribution. 60=Size of Masda lamp to be used.
 (1) Holders. B denotes 2 1/4 inch and 3 1/4 inch heel. The 2 1/4 inch heel is supplied on all reflectors below the 400 watt size. The 3 1/4 inch heel is supplied on reflectors for 400 watt lamps and larger. With the 2 1/4 inch heel use the Form O holder, never Form B. With the 3 1/4 inch heel use holders Nos. 622, 635 or 672.
 C denotes porcelain socket holder. Use with standard porcelain sockets.
 D denotes clip strap added to clip spring. Use on heavy reflectors and reflectors subjected to strong vibration.
 J denotes a reflector which has a standard brass shell keyless socket locked into it in such a manner that the reflector and socket make a solid one-piece unit. 60 and 100 watt reflectors carry 1/2 inch sockets; 150, 200 and 250 watt reflectors carry 3/4 inch sockets.
 K denotes a reflector which has a standard brass shell key socket locked into it in such a manner that the reflector and socket make a solid one-piece unit.
 R denotes solid extension enclosing lamp receptacle.
 S denotes threaded extension enclosing lamp receptacle.
 The S holder is tapped at the top for suspension from 3/4 inch pipe. As a special, if so specified on the order, the S holder will be furnished, tapped for 1/2 inch pipe.
 Clip spring holder has no letter designation. Use with standard brass shell sockets.
 (2) Finishes. A denotes Cleansey aluminum interior finish and green baking varnish exterior finish.
 E denotes white porcelain enamel interior finish and green porcelain enamel exterior finish.
 (3) Distribution of Light. E denotes extensive distribution. I denotes intensive distribution. F denotes focusing distribution. D denotes the broad distributing distribution. L denotes an angular distribution. MM denotes the "Masda Mill" distribution.
 (4) Size of Lamp. 20, 25, 40, 60, 100, etc., denote the wattage of Masda lamps which are used with reflectors so designated. The numbers of the aluminum finished reflectors of the Ivanhoe Counter Line do not follow this rule, but are serial numbers without special meaning.
 Holders for Reflectors B, C, D, J, K, R, S and clip spring holders are furnished as a part of the reflector. They are not to be ordered separately. While nearly every holder can be fitted to any reflector form, orders should be confined as far as possible to the standard combinations. The only holder supplied on the 400, 500 and 1000 watt sizes is the B type, 3 1/4 inch heel.
 Solid Extension (R Type). The R holder is a solid extension made as part of the reflector form. It is supplied in two designs as follows:
 All R type reflectors, except MM diffusers, have the Easy-to-Wire R Holder. This holder is made in two parts: a copper extension, which is locked securely into the porcelain enameled form and the lamp receptacle. The receptacle is held in the extension by three set screws. For wiring, these screws are loosened and the reflector raised on the rod hanger until the receptacle is exposed as shown in the illustration. This holder is tapped for 3/4 inch pipe only.
 The R holder on MM diffusers is solid extension, finished over its entire surface with the same finish as the body of the reflector. The porcelain receptacle, which is securely fastened to the extension, may be removed for wiring by loosening the screws which hold it. This type of holder is weatherproof, tapped for 1/2 inch pipe, and in every way substantial for outdoor service.

List No.	List Price and Data	Std. Pkg.	Wt., Pkg.	Length	Diam.	List Price Each
622	Metal part of sherardized iron	30	93	\$2.48
635	Is No. 622 with jap. iron canopy set over	30	110	3.66
672	Is No. 622 with green porcelain enameled canopy	30	120	4.06
6612	Suspension	20	40	12 ins.	3/4 in.	.70

Holders Nos. 622, 635 and 672 are used with those reflectors for lamps of 400 watts and larger which have 3 1/4 inch B type heels.

Extensive Type, "Cleanzy" Aluminum Finish

Extensive Type reflectors with "Cleanzy" aluminum finish provide units of high efficiency for the lighting of such work as assembling, packing, inspecting and boxing. To produce uniform illumination, these reflectors should be spaced 2 times as far apart as the mounting height above the plane to be lighted.

The above illustrations show characteristic shapes of the standard designs listed below, which we recommend and carry in stock. For description of holders and explanation of stock numbers, see previous page.

Intensive Type, "Cleanzy" Aluminum Finish

Intensive Type reflectors with "Cleanzy" aluminum finish have been designed for the uniform illumination of large areas from light units suspended well above the plane to be lighted. They should be spaced at a distance apart equal to $1\frac{1}{4}$ times their height above the plane to be lighted. They are also used for the lighting of groups of machines such as looms, winders, lathes, shapers and knitting machines.

The above illustrations show characteristic shapes of the standard designs listed below.

Distributing Types, "Cleavezy" Aluminum Finish

Distributing Type Ivanhoe reflectors with the "Cleavezy" aluminum finish may be used for general illumination in storage plants, warehouses, and in mills and factories when local lighting is provided for individual machines. These reflectors give a broad distribution of light which produces practically uniform illumination when they are spaced 1.6 times as far apart as the mounting height above the plane to be lighted.

For description of holders and explanation of stock numbers, see page 117.

Lighting Fixtures and Accessories

IVANHOE METAL REFLECTORS

Distributing Type, Porcelain Enamel Finish

Distributing Type Ivanhoe porcelain enameled reflectors, although widely different in shape from the distributing type with the "Cleansey" finish, give the same broad distribution and may be used for similar illumination work. For uniform illumination, these reflectors should be spaced 1.6 times as far apart as the height above the plane to be lighted.

FOR HEAVY DUTY OUTDOOR OR INDOOR SERVICE

These reflectors are especially designed for heavy duty service indoors and outdoors. With the exception of the copper nut at the top, all surfaces are heavily porcelain enameled, green outside, white inside. The copper nut is tapped for $\frac{1}{2}$ inch pipe suspension. The nut locks to the porcelain form through a bearing surface of extra large diameter. It will hold secure under all conditions and will not injure the porcelain. The bead of the reflectors at the lower edge is so rolled that it will shed water readily. For railway platform lighting, store front and billboard lighting.

M-M Diffusers, Porcelain Enamel, for Outdoor Service

M-M Diffusers are especially designed for outdoor service. They are made of heavy metal and the contour is so designed as to give the maximum rigidity. M-M Diffusers with the R holder are tapped at the top for suspension from ½ inch pipe. The extensions for both R and B holders are of extra heavy construction, so as to withstand the severest outdoor service.

IVANHOE COUNTER LINE METAL REFLECTORS

CONE AND PARABOLA REFLECTORS

There are two styles of Reflectors listed. Mfr. numbers beginning with "A," for example, A-17, A-18, A-19, etc., designate steel Reflectors finished on the interior surface with an aluminum coating, on the outer surface with brush brass or a green baking varnish.

Mfr. numbers beginning with "PD" and "DPD" designate steel Reflectors finished on the interior with a pure white paint enamel and on the outer surface with a green paint enamel.

DAL-200

Nos. DAL-250

Nos. BAL-500,
BAL-1000

Angle Type, "Cleanzy" Aluminum Finish

Angle Type Ivanhoe Reflectors with "Cleanzy" aluminum finish are used in small single units for the lighting of such machine tools as speed drills, milling machines, shapers and other machines requiring a bright illumination over a small area from a light unit which cannot be placed directly above the work. The larger units may be used for the general illumination of large bays in steel mill buildings where the illumination is provided from large lamps hung from the side columns. No. DAL-100, No. DAL-250, No. BAL-500, give the maximum candle power between the angles 45° and 75°. The balance of the units give the maximum candle power between 15° and 25°.

The above illustrations show characteristic shapes of the standard designs listed below. For description of holders and explanation of stock numbers see previous pages.

X-RAY REFLECTORS FOR DIRECT LIGHTING

No. 700
A Semi-Concentrator
Using 100 Watt Lamps

No. 696
A Concentrator
Using 25, 40, and 60 Watt Lamps

No. 710
A Concentrator
Using 100 Watt Lamps

Semi-concentrating Reflectors

The No. 700 reflector, which is similar in design to the No. 696, as illustrated, is called a semi-concentrating reflector because it does not spread the light as far as the distributing reflectors, and yet does not confine the light into such a small area as do the concentrating reflectors shown. The No. 700 reflector is used with a 100 watt lamp.

List No.	Dimensions, Inches		Size of Holder Inches	Size, Lamp Watts	Std. Pkg.	List Price Each
700	Diameter	Height	Inches	Watts	Pkg.	Each
	10	5½	2¼	100	18	\$2.26

Concentrating Reflectors

The concentrating reflectors should be used whenever a very intense light is wanted over a small area, such as over desks, counters, special machinery, etc.

The small reflector, No. 696, will take care of the 25, 40, and 60 watt sizes, while No. 710 was designed for 100 watt lamps.

List No.	Dimensions, Inches		Size of Holder Inches	Size, Lamp Watts	Std. Pkg.	List Price Each
696	Diameter	Height	Inches	Watts	Pkg.	Each
710	8	5	2¼	25, 40, and 60	24	\$1.88
	11½	6¾	2¼	100	6	3.76

SPACING AND SELECTION OF REFLECTORS FOR SHOW-WINDOW LIGHTING

The number of reflectors to use is optional with the merchant. No set rule can be established. It is influenced by a number of conditions, such as the brightness of neighboring windows, the intensity of the street illumination, kind of goods on display, color and nature of background in window, and largely the extent of the merchant's realization of the advertising and selling value of bright windows.

The closer the reflectors are spaced, the brighter the window becomes, and vice versa.

In average installations the spacing, or distance from center to center for these reflectors, is about as follows:

Scoop.....	60 watt Mazda lamp....	18 ins.
Visor.....	100 watt Mazda lamp....	24 ins.
Helmet.....	100 watt Mazda lamp....	36 ins.
Poke Bonnet.....	2-60 watt Mazda lamps....	36 ins.
Hood.....	60 watt Mazda lamp....	18 ins.

X-RAY STORE WINDOW SEARCHLIGHTS

The window display should be brightly illuminated, but lamps should not be placed where they are seen, as the delicate organs of the eye are affected by bright light sources and the seeing power of the eye is greatly lessened. It is somewhat like the blindness occasioned when looking into the sun. This is now a well recognized principle and cannot be too strongly emphasized. Reflectors should be designed so as to protect the eye of the person looking at the display in the window; all of the light should be reflected down on the display, and for economical results no light should be wasted on the ceiling of the window or sidewalk.

X-Ray reflectors are not only of correct shape but have the most powerful reflecting surface known, a pure silver—not quicksilver—mirror. Therefore, to produce the desired degree of brightness of illumination, less current is needed than with any other reflectors manufactured.

In the design of these reflectors sufficient room has been allowed for cleaning without removing lamps from reflectors, thus reducing the lamp breakage to a minimum.

The inside glass protection to the silver plating is easily cleaned by simply wiping (inside of reflector only) with a damp cloth. They need not be cleaned as frequently as other types, and should never be immersed in water.

Scoop No. 777
For Square Windows

Hood No. 730
For Shallow Windows

Scoop Reflector

The Scoop Reflector was designed for windows of medium size where the depth is approximately equal to the height. With this reflector the 60-watt lamp gives the best results. This reflector gives a downward light of 275 candle power and throws very little light out on to the sidewalk.

List No.	Width	Dimensions, Inches Depth	Height	Size of Holder Inches	Std. Pkg.	List Price Each
777	9	7½	6¾	2¼—"O"	15	\$4.50

Hood Reflector

This Hood Reflector is designed to light low, shallow windows as efficiently as the Helmet lights higher windows of the same type. The design of this Hood Reflector is such as to produce a high concentration in the window—cutting the light off sharply at the window plate.

The Hood closely follows correct window lighting principles. It is installed at the ceiling near the glass front, hides the lamp, and practically eliminates unpleasant glare.

List No.	Width	Dimensions, Inches Depth	Height	Size of Holder Inches	Price Reflector Only
730	9	9½	5¾	2¼—"O"	\$4.50

X-RAY STORE WINDOW SEARCHLIGHTS

Visor No. 780
For Windows Having Glass or Polished Backgrounds

Helmet No. 755
For High Windows

Visor Reflector

The Visor Reflector is for windows having glass or polished backgrounds, where back reflection must be avoided or where the lamps must be hidden from people in the store. Use 100-watt lamp with this reflector.

List No.	Dimensions, Inches			Size of Holder Inches	Std. Pkg.	List Price Each
	Width	Depth	Height			
780	9½	10½	9½	3¼—A	4	\$6.00

Helmet Reflector

The Helmet was designed for windows where the lamps are placed considerably above the space to be lighted. It is made large, first because it is designed to take the large 100-watt Tungsten lamps so as to keep the cost of installation and lamp renewals as low as possible for the merchant, and second, because a large reflector is absolutely necessary for efficient utilization of the light in the class of windows for which this reflector is designed. Although a large reflector, silver plated, is necessarily more expensive than small, cheap reflectors, the cost is justified many times over by the results.

List No.	Dimensions, Inches		Size of Holder Inches	Std. Pkg.	List Price Each
	Diam.	Height			
755	12	10	3¼—A	4	\$7.50

Poke Bonnet No. 750
For Low, Deep Windows

Midget No. 510
For Very Small Windows

Poke Bonnet Reflector

This is a sectional trough reflector with an adjustable holder which is easily attached to either the ceiling or transom bar. The lamps are held in this reflector by a nickel-plated twin socket. The largest lamp bulb which can be used in this reflector is a 60-watt Mazda lamp.

This reflector is especially adapted to the lighting of low, deep windows, where the reflectors cannot be placed more than 6 to 10 feet above the bottom of the window.

List No.	Size Inches	Std. Pkg.	List Price Complete
750	14 x 7 x 3¼	8	\$9.76

Midget Reflectors

It uses the 25-watt tubular Mazda lamp, and is the ideal reflector for lighting display cases, small store windows, wall cases, cornices, pictures, etc. Shade holder is supplied with this reflector.

Lighting Fixtures and Accessories

GLASS SHADES

Reflectophane Reflector

Reflectophane Reflectors

The Reflectophane is a silvered glass reflector. The silver is blown into and between the inner and outer surface after the glass shade has been made and is sealed into this air-tight space, absolutely preventing deterioration of brilliancy or cracking of the silvered part of the reflecting surface.

It is suitable for window lighting, indirect lighting, or for a powerful concentrated light for commercial purposes.

The Reflectophane allows enough light to pass through its neck to illuminate window transparencies, glass or alabaster bowls where semi-indirect light can be accomplished by placing the Reflectophane inverted within the bowl.

Its highly polished inner surface can be easily cleaned by passing a dry cloth over it.

At a series of laboratory tests, the Reflectophane showed a downward reflection of 260 C. P.

Druid Glass Stonehenge Design

Druid glass is a light density opal. It is pure white in color. Druid Glass Reflectors are intended principally for commercial lighting, but many uses will be found for them in the ornamental field, because of the simplicity of the Stonehenge design in which Druid Glass is furnished.

List No.	Mazda Lamp Watts	Dimensions—Inches			No. in Standard Pkg.	List Price per Doz.

Sudan Glass, Panelex Design

Sudan glass is a medium density opal which is pure white in color when unlighted. Lighted it has a faint amber tint, which gives the reflectors a rich glowing appearance. The panelex design in which Sudan glass is furnished is absolutely new. It has been developed with the most careful regard to service conditions, such as the avoidance of dust accumulation, elimination of glare, and efficient distribution of light.

Bowl type reflectors are recommended as the most generally satisfactory equipment, since they cover the lamp filament so as to prevent the glare of the shallower reflectors.

HOLOPHANE GLASS REFLECTORS

Extensive Type Xtraficiency
ReflectorCharacteristic Distribution Extensive
Type Reflector

Extensive Type Xtraficiency Reflectors

These Reflectors are used for the lighting of small rooms with one light in the center, and for large rooms with low ceilings where the lights are placed in the centers of squares over the area to be lighted.

The Intensive Reflector shown below may be used to replace the Extensive Type with higher efficiency in the installation although the uniformity of lighting will not be as good.

Battery Charging Plug

Plug Clusters

Plug Clusters are designed for increasing the number of outlets of a given single socket. Any combination of lamps or attachment plugs may be employed. They obviate the necessity of extra wiring, are therefore serviceable for attaching household electrical devices, such as portable lamps, flatirons, fans, etc. The series plug may be used to advantage for operating two 110-volt lamps in series on 220-volt circuits. Standard finish is polished brass.

Bryant Shade Holders

The spring shade fastening of Uno and New Wrinkle Shade Holders provides an improved means of securing the shade in the holder and has the following advantages: The locking wire expands and contracts uniformly at every point. The locking wire touches the shade at every point. The locking wire is free to expand as the shade expands from the heat of the lamp, without in any way lessening the security of the fastening. The shade is held absolutely central in the holder. The holder will support the heaviest shades with absolute security. Shades can be attached and removed in one tenth of the time required for holders with three screws.

UNO SHADE HOLDERS

Schedule "D"

A one-piece holder which threads directly on to Bryant-Perkins brass shell sockets and receptacles. Quickest and easiest to put on and stays put. The threading of the bead on the socket and receptacle shells does not prevent the use of other makes of shade holders.

List No.	Description	Size Inches	Std. Pkg.	per 100 Finished	List Price per 100 Unfinished

The above list prices cover brush brass, polished brass or rich gilt. Special finishes, except gold, silver and sand blast, add \$2.10 extra per hundred list. Brush brass shipped unless otherwise ordered.

New Wrinkle Shade Holders

Schedule "H"

New Wrinkle Shade Holder is attached to the socket in a manner which is extremely simple and can be accomplished in a minimum time and yet with greater rigidity than is provided in many types of holders now on the market.

List No.	Style	Carton	Std. Pkg.	Wt., Lbs. Std. Pkg.	Price per 100
440	2 1/4 inch	50	200	20	\$25.92
441	Form H	25	100	15	34.56
442	3 1/4 inch	25	100	15	43.20

New Wrinkle Emergency Shade Holder

Schedule "H"

The New Wrinkle Emergency Shade Holder has the same method of securing the shade in the holder as described above. It is attached to the socket by means of a screw shell which, introduced between the screw shell and the porcelain wall of the lamp socket, engages with the screw shell of the lamp socket. The screw shell of the shade holder is thoroughly insulated from the holder itself.

It has always been impossible to make a satisfactory shade holder for use in connection with weather-proof and other porcelain sockets and receptacles, as not only do the porcelains vary in thickness but also they are frequently much away from a true circle. It has been mechanically impossible to make a practical holder that would fit porcelains of minimum and maximum thickness and all the various shapes. The New Wrinkle Emergency Shade Holder solves the problem.

THE DIM-A-LITE

No. 23

No. 31

No. 24

Dim-A-Lites and Dimming Sockets

A small attachment for dimming or turning down a single incandescent lamp.

Can be used with either carbon or Mazda lamps up to 40 watts.

Five changes of light can be obtained, viz.: Full, half, dim, night light and out.

Saves current, from 30% to 80%, depending upon degree of turn down; U. S. Government test.

Approved by Underwriters. Guaranteed five years.

Fits any fixture or chandelier socket and takes any ordinary electric lamp.

Suitable for any current, either direct or alternating.

The pull chain may be made as long as desired.

The resistance wire and contact bars are imbedded in a solid fireproof composition called Di-el-ite, which prevents the wire from corroding.

STYLES OF DIM-A-LITES

No. 23. Pull chain, portable, or interchangeable type. Furnished on all orders unless other types are specified.

No. 24. Portable Shade-holder Type. Operated either by turning shade or pulling cord. Slight turn of shade gives any degree of light desired. Equipped with 2¼ inch shade holder. Preferred when the light is within easy reach.

DIMMING SOCKETS

No. 27. Turnshade Socket Dim-a-lite. Combination Dim-a-lite, fixture socket and shade holder complete. Light is regulated by turning shade. Designed to be permanently fastened to fixture stem.

No. 31. Standard Chain Pull Dimming Socket. Five degrees of light. Standard construction throughout. Combines standard chain pull socket, Dim-a-lite and husk, or shade holder. Attached permanently to fixture stem by thread and set screw. Equipped with highest grade dumbbell unit brass chain. Guaranteed five years.

List No.	Style	*Std. Pkg.	List Price Each

For Porcelain Socket

Matthews Holdfast Lamp Guards

The rigid construction of the Matthews Holdfast Lamp Guard makes it a desirable protective device for incandescent lamp bulbs. The guard clamps directly on the socket, removing all possibility of strain on the bulb. In addition, a patented spring spiral cushion shock absorber in the center of the guard takes up any jar to which the lamp may be subjected. A patented trap-lock is used to close the bottom opening and lock in the lamp. Will fit all locking sockets. Guaranteed for ten years.

LAMP GUARDS

No. 2000 Cable Rack Portable

3001 Vaporproof Guard

Cable Rack Portable Lamp Guard

A very handsome portable with black enamel handle. The cage portion of this portable is half guard and half reflector so as to direct the reflected light where it is needed. The handle is equipped with a hook. This portable is designed principally for use around telephone switchboards. Furnished with key or keyless socket securely embedded in handle giving a firm and rigid base. Takes a 60 watt 110 volt Mazda lamp. Cage and reflector portion heavy tinned finish.

List No.		*List Price Each
2000	Key Cable Rack Portable Lamp Guard.....	\$2.50
2001	Keyless Cable Rack Portable Lamp Guard.....	2.40

No. 3001 Safety Vaporproof Portable Guard

This guard is just what its name describes, and is designed to meet the requirements of the garage or wherever gases or inflammable materials may be used. A heavy steel frame, strong handle, handy grip hook, and vaporproof receptacle make this the best vaporproof guard on the market. Takes a 25 watt standard Mazda lamp. Heavy tinned finish.

3001	Safety Vaporproof Portable Guard.....	\$4.50

No. 4000

No. 1439 Style C

No. 1437 Style B

No. 1440 Style D

No. 4000 Dreadnaught Portable Lamp Guard

A very strong portable guard made of Bessemer steel built to withstand hard usage and can be recommended to give unusual service. Has a porcelain keyless socket fitted with spring contact firmly embedded in handle. Takes a 60 watt lamp. Metal part copper plated finish. Made only in one size and finish.

List No.		*List Price Each
4000	Dreadnaught Portable Lamp Guard.....	\$2.50

Style C Wall Guard and Outlet Box Cover Combined

A device for which there is a demand in every theater, warehouse or outside platform, wherever a stationary outlet box socket is in use. Very strongly constructed of Bessemer steel wire ribs, stamped rings and plate or cover which will fit either a 3 or 4 inch outlet box and will take standard outlet box receptacles. The plate or box cover forms the lower part of the guard itself forming a combined cover and guard. It reduces the contractors stock as only one device takes the place of different size covers and guards. Heavy tinned finish. Diameter $3\frac{1}{2}$ inches, depth $5\frac{1}{4}$ inches.

1439	Style C Wall Guard Outlet Box Cover Combined.....	\$1.00
------	---	--------

Style B Wall Guard

For use in theaters, docks, warehouses and outdoor work where a stationary socket is used. Very strongly constructed of Bessemer steel wire ribs and stamped rings. Has a removable base ring which is attached to the wall. Key hole slots in base ring make them easy to attach and detach. Copper plated finish. Diameter $3\frac{1}{2}$ inches, depth $6\frac{3}{4}$ inches.

1437	Style B Wall Guard.....	\$1.40
------	-------------------------	--------

No. 1440-D Wall Guard

This device is the same as above excepting that it is fitted with a trap or cover which is equipped with a key locking arrangement, thus preventing theft of lamps as well as breakage. Heavy tinned finish. Diameter $3\frac{1}{2}$ inches, depth $5\frac{1}{4}$ inches.

1440-D	Wall Guard.....	\$1.40

MACALLEN INSULATING JOINTS

NEW ARMORED TYPE Combination Joints

The Macallen Company have produced a new form of insulating joint which is the result of much research and experience. They have studied the weak points of every insulating joint ever made, and are satisfied that this new joint overcomes every objection from a mechanical or electrical point of view.

This joint is the most compact, has the greatest mechanical strength and the highest insulating qualities of any insulating joint ever produced.

The armored portion of this joint, being octagonal in shape, makes it extremely easy to install. The metal portions are all steel, the octagonal portion being made of seamless drawn steel tubing, and the nipples turned from steel rod.

These joints are regularly inspected and labeled under the supervision of the Underwriters' Laboratories, Inc., under the direction of the National Board of Fire Underwriters.

CUTTER RADIAL STREETHOOD BODIES

For Street Lighting

A Radial Streethood Body consists of a ventilated iron canopy threaded for $\frac{3}{4}$ inch pipe or adapter or for $1\frac{1}{4}$ inch pipe; a porcelain housing with attachments for either multiple or series sockets and a porcelain enameled radial reflector with or without diffusing glassware. The porcelain housing is made for use with either inner-wired or outer-wired fixtures and is covered with a weatherproof glaze of an attractive color. Wires leading to the socket may be tied securely in the rim of the porcelain thus eliminating the necessity of a crossarm.† Where list prices include sockets, Cutter lamp grip multiple sockets or Regent film sockets* will be supplied.

CUTTER STREETHOOD BODIES

For Street Lighting

A Refractor or Diffuser Streethood Body consists of a ventilated iron canopy threaded for $\frac{3}{4}$ inch pipe or adapter or for $1\frac{1}{4}$ inch pipe; a porcelain housing with attachments for either multiple or series sockets, a porcelain enameled reflector and a prismatic glass refractor or opal diffuser. The porcelain housing is made for use with either inner-wired or outer-wired fixtures and is covered with a weatherproof glaze of an attractive color. Wires leading to the socket may be tied securely in the rim of the porcelain housing, thus eliminating the necessity of a crossarm.† Where list prices include sockets, Cutter lamp grip multiple sockets or Regent film sockets* will be supplied.

CUTTER INVERTED CONE STREETHOOD BODIES

For Street Lighting

Inverted Cone Streethood Bodies are made in two sizes with 18 and 22 inch hoods, respectively. The same reflector is used with both. The reflector shape, which resembles the frustrum of an inverted cone, is designed to throw the reflected rays out at a distance where they are needed to help the direct rays of the lamp. The hood overlaps the reflector so that most of the light passing above the horizontal is redirected into useful planes. Distribution curves show that the 18 inch size gives splendid results with 60, 80 and 100 candle power series lamps and small multiple lamps. The 22 inch size gives higher efficiency with the same lamps and is always recommended for 100 and 250 candle power series lamps.

An inverted cone body consists of a hood top, reflector, hood fork with $\frac{3}{4}$ inch rigid male nipple and with or without socket, according to list.

The hoods and reflectors are made of special deep drawing steel and finished in either high-grade weather-resisting baked paint enamel or porcelain enamel.

The hood fork has a flange near the top which fits directly beneath the upper portion of the hood. The $\frac{3}{4}$ inch nipple is made a rigid part of the flange, projecting above it for connection to the crossarm of outer-wired brackets or to the hood flange which is screwed on the outer end of inner-wired brackets.

*See description of Regent Film Socket. Standard Film Sockets will be furnished when so ordered.

Delivery F. O. B. Factory, South Bend, Ind. For warehouse deliveries write nearest house.

18 Inch Inverted Cone Streethood Body

22 Inch Inverted Cone Streethood Body

22 Inch Hood, Reflector and Regent Film Socket with Hood Fork and $\frac{3}{4}$ Inch Rigid Nipple

Distribution Curve for 80 C. P. Lamp and 18 Inch Inverted Cone Streethood Body

CUTTER INCANDESCENT BRACKETS

For Streethood Bodies

Brackets listed on this page are designed for use with Inverted Cone Streethood Bodies shown on preceding page. Prices include crossarms which are threaded underneath for $\frac{3}{4}$ inch nipple. Hood forks furnished with sockets for 18 and 22 inch Inverted Cone Streethood Bodies have rigid $\frac{3}{4}$ inch nipples. The flanged portion of the hood fork fits the lower surface of the hood top, clamping it securely to the crossarm. Prices do not include hoods, reflectors or sockets. Order Inverted Cone Streethood Bodies separately as listed on preceding page.

Standard Bracket

High Voltage Bracket

Iron Arm Bracket

Urban Bracket

Boulevard Bracket

Delivery F. O. B. Factory, South Bend, Ind.
 Street Lighting Appliances

STANDARD BRACKETS

Has a 3 foot gooseneck of $\frac{1}{2}$ inch pipe, pole plate and enameled wood crossarm with metal bound ends (to prevent splitting) and with wireable waste nut fastened to the arm. The brace arm shown on the back of the pole is used to guide the line wires to the crossarm. This method of wiring holds the fixture steady in stormy weather.

List No.	Description	Std. Pkg.	Wt. Lbs. Each	List Price
21923	With brace arm.....	20	10	\$2.10
21924	Without brace arm.....	20	7	1.44

RAILWAY BRACKETS

Similar to the Standard Bracket, with a clamp for iron pipe in place of the pole plate. Prices below do not include brace arm.

21925	For 2½ in. (bore) pipe.....	20	8	\$1.02
21926	For 3 in. (bore) pipe.....	20	9	1.74
21927	For 4 in. (bore) pipe.....	20	10	1.98
21928	For 5 in. (bore) pipe.....	20	11	2.22

HIGH VOLTAGE BRACKETS

Consists of the Standard Bracket with a Cutter High Voltage Insulator between the gooseneck and crossarm. This prevents grounds and leakage of current on high potential circuits. Prices below do not include streethood bodies.

21929	With brace arm.....	20	12½	\$3.18
21930	Without brace arm.....	20	9½	2.52

IRON ARM BRACKETS

Similar to the Standard Bracket, with an iron crossarm supporting glass insulators. Prices do not include streethood bodies.

21931	With brace arm.....	20	13	\$2.46
21932	Without brace arm.....	20	10	1.80

EASTERN BRACKETS

Consists of the Iron Arm Bracket with a Cutter High Voltage Insulator between the gooseneck and iron crossarm. Prices do not include streethood bodies.

21933	With brace arm.....	20	16	\$3.54
21934	Without brace arm.....	20	13	2.88

URBAN BRACKETS

The spreader on the end of the gooseneck has a fiber insulator to separate it from the streethood proper, thus reducing the risk of leakage on circuits up to 600 volts. Furnished with 3 foot gooseneck of $\frac{1}{2}$ inch pipe. Prices do not include streethood bodies.

21935	With brace arm.....	20	11	\$2.70
21936	Without brace arm.....	20	8	2.04

BOULEVARD BRACKETS

Furnished with pole plate, crossarm, and 5 foot gooseneck of $\frac{1}{2}$ inch pipe ornamented with wrought iron scrolls. Prices do not include streethood bodies.

21937	With brace arm.....	20	17	\$3.66
21938	Without brace arm.....	20	14	3.00

AVENUE BRACKETS

Same as the Boulevard Bracket, with a Cutter High Voltage Insulating Joint between the gooseneck and crossarm. Prices do not include streethood bodies.

21939	With brace arm.....	20	20	\$4.74
21940	Without brace arm.....	20	17	4.08

For warehouse deliveries write nearest house.

CUTTER INCANDESCENT BRACKETS

For Streethood Bodies

Brackets listed on this page are designed for inner-wired fixtures using Inverted Cone Streethood Bodies described and listed on a preceding page. The outer end of the gooseneck is fitted with a hood flange tapped for the $\frac{3}{4}$ inch hood fork nipple. Prices of brackets do not include hoods, reflectors, sockets or hood forks.

Inner-Wired Bracket

Majestic Junior Bracket

Spartan Junior Bracket

Wall Bracket

Corinthian Bracket

Entrance Bracket

INNER-WIRED BRACKETS

Consists of a 3 foot gooseneck of $\frac{1}{2}$ inch pipe, $\frac{1}{2}$ inch by $\frac{3}{4}$ inch hood flange, and grooved pole plate.

List No.	Description	Std. Pkg.	Wt., Lbs. Each	List Price Each
21941	With brace arm.....	20	8 $\frac{1}{2}$	\$1.80
21942	Without brace arm.....	20	5 $\frac{1}{2}$	1.14

MAJESTIC JUNIOR BRACKETS

A highly artistic fixture built on the same lines as Majestic Bracket (Trade No. 21525), but smaller, having a reach of 3 feet from pole to lamp and with the arm made of $\frac{1}{2}$ inch pipe. Designed for either inner or outer wiring.*

21943	With hood flange.....	20	15 $\frac{1}{4}$	\$3.30
21944*	Without hood flange.....	20	15	3.12

SPARTAN JUNIOR BRACKETS

A single bend bracket of $\frac{1}{2}$ inch pipe which holds the lamp 3 feet from the pole. Designed for either inner or outer wiring.*

21945	With hood flange.....	20	13 $\frac{1}{4}$	\$2.94
21946*	Without hood flange.....	20	12	2.76

WALL BRACKETS

Has a 4 foot gooseneck of $\frac{1}{2}$ inch pipe so the pipe can extend 1 foot inside the flange and hold the lamp 3 feet from the wall. Furnished with wall flange and $\frac{1}{2}$ inch by $\frac{3}{4}$ inch hood flange.

21947	20	6 $\frac{1}{4}$	\$1.32
-------	-------	----	-----------------	--------

CORINTHIAN BRACKETS

A 3 foot bracket of $\frac{3}{4}$ inch pipe with heavy wall plate and wrought iron trimmings. The headpiece is threaded for $\frac{3}{4}$ inch nipple and has a flange to fit the top of the streethood body.

21948	20	19 $\frac{1}{2}$	\$4.02
-------	-------	----	------------------	--------

ENTRANCE BRACKETS

Has a 4 foot gooseneck of $\frac{3}{4}$ inch pipe and a wall flange with set screw, which allows the pipe to extend 1 foot inside the flange and 3 feet outside. Furnished with cast iron scroll and hood flange to fit streethood bodies. This bracket may be used with all Cutter Streethood Bodies having fittings for $\frac{3}{4}$ inch pipe. Furnished with hood flange or plain threaded end for Radial Streethood Bodies with $\frac{3}{4}$ inch canopies.

21949	With hood flange.....	20	25	\$4.44
21950	Without hood flange.....	20	23 $\frac{1}{2}$	4.26

CAST SCROLL BRACKETS

Similar to the Entrance Bracket, but with a 3 foot gooseneck of $\frac{3}{4}$ inch pipe (Style B, Trade No. 21442) and with a grooved wall plate to replace the wall flange and inside pipe. This allows the wires to be brought out of the building at any desired point and guided along the wall to the place where the fixture is located. Furnished with hood flange for Inverted Cone Streethood Bodies or with plain threaded end for $\frac{3}{4}$ inch streethood canopies.

21987	With hood flange.....	20	24	\$4.14
21988	Without hood flange.....	20	22 $\frac{1}{2}$	3.96

*Majestic and Spartan Junior Brackets will be furnished with grooved pole plates unless otherwise specified. For outer-wired fixtures, order Standard Crossarm No. 21496 or Iron Crossarm No. 21497 in place of hood flange. For outer-wired brackets on series circuits, order $\frac{1}{2}$ inch Hood Insulator No. 21494 to separate gooseneck from crossarm.

with Clamp KnobJunior Mast Arm
with Triple Insulation ArmLong Junior Mast Arm
with Triple Insulation ArmLong Junior Mast Arm
with Cutout Pulley

Cadet Mast Arm

Delivery F. O. B. Factory, South Bend, Ind.
Street Lighting Appliances

WIND-BRACED MAST ARMS

The only side mast arms having braces to prevent the arm from rocking on the pole. They have two strain rods run over a wrought iron truss at the pole and through the eyes of a stiffening triangle.

The base of the wrought iron truss has an extension brace which is bolted to the pole, while a similar brace (clamped to the piping) is bolted to the other side of the pole. These braces anchor the pipe firmly, and keep the fixture from swaying sideways in the wind.

The mast arm proper can be partly assembled on the ground. The pole plate has a weatherproof pulley fastened to it, and the lamp-supporting pulley at the outer end makes this mast arm unusually complete.

With Clamp Knob Only

With Triple Insulation Arm

CUTTER MAZDAARCS

Style AA Mazdaarc

These fixtures consist of ventilated copper casings with lamp grip sockets and supporting spindles adjustable vertically with respect to the reflector or globe. These features make them adapted for use with all types and sizes of lamps, including the Type C Mazda lamps.

The casings are finished in black enamel or mottled copper and the steel reflectors in porcelain enamel.

Combinations may be made for any requirement in store, factory or street lighting. Each fixture gives the appearance of an arc lamp, and furnishes a soft light at the efficiency of the Mazda lamp.

For series street lighting systems, reactance sockets may be used, the coils being mounted inside the casings and connected in parallel with the sockets, no regulating apparatus being required.

STYLE AA

Designed especially for store lighting. Has an insulated ring for suspending from the ceiling and an Acorn diffuser. If 9 x 13 inch clear ball globe with a hole in the bottom is desired, deduct 60 cents list.

Black Enamel Finish

CUTTER SOL-LUX PENDANTS For Type C Lamps

**Sol-lux Junior Pendant with
18 Inch Reflector and
Large Refractor**

**Sol-lux Junior Pendant with
18 Inch Reflector and
Diffusing Globe**

**Sol-lux Senior Pen-
dant with Diffusing
Globe**

Cutter Sol-lux pendants are made in two styles and are designated Junior and Senior, respectively. The Junior pendant has a hinged holder for diffusing globe or refractor and is furnished with or without 18 inch concentric reflector. The Senior pendant has a large holder for pear-shaped diffusing globe and is furnished with or without 24 inch concentric reflector. Except as regards size of holder, the Junior and Senior pendants are the same. Compensators may be used with either style. The upper part of the casing is made of cast iron and has ornamental ribs which provide ample ventilation for Type C lamps. Wires leading to the socket terminals enter the fixture through porcelain bushings. Above these is an insulated suspension ring. The lower part of the casing is made of 20 gauge copper. All cast iron parts are coated with a weather-resisting black paint enamel. Copper parts have an attractive gun metal finish and the reflectors are porcelain enameled steel.

Prices below do not include lamps.

Street Lighting Appliances

CUTTER REGENT FILM SOCKETS

For Street Series Systems

Regent Receptacle and
Mogul Base Socket with
Film Holder

Showing Ease with which
Films are Removed

Regent Film Socket
No. 21467 Complete

The film socket is the vital part of the regulating mechanism of a series lighting system, and it must constantly perform its function reliably and accurately. When one lamp in a circuit burns out, the dielectric film must puncture, allowing the circuit to reestablish itself instantly. Otherwise, the remaining lamps in the circuit will cease to burn. The constant current transformer regulates the voltage to compensate for burned-out lamps, but as each lamp burns out there is a momentary rise of potential across the terminals of that lamp. If the dielectric strength of the film be too great, the rise of voltage may not be sufficient to puncture the film at all, or until such time as will permit ill effects to be produced along the line and in auxiliary apparatus. On the other hand, if the film is weak, it may break down before the useful life of the lamp is secured. The film socket is the safety valve and much depends upon its reliability.

The film cutout used in the Regent Film Socket punctures uniformly and accurately at rated voltage. It is enclosed in the socket and protected against climatic conditions. It cannot creep or fall out as a result of the vibration of the fixture and lamp in service.

The film holder is so designed that it is impossible to use any substitute in place of the regular film. Wood splinters, paper, etc., cannot be used. Films are easily renewed.

On account of wind action and changing climatic conditions, the spring clips commonly used to support the socket and lamp deteriorate and allow the lamp to fall out. There are no spring clips used in the Regent Socket.

The two screw shells and the center post form a combination that grips the lamp base and holds it securely in position, greatly reducing lamp breakage during inclement weather.

The Regent Film Socket is only $3\frac{1}{2}$ inches over all, and due to the fact that all contacts and live parts are covered by the porcelain, the socket can be mounted in a very small space. The distance between supporting screws and nearest live terminal is $1\frac{1}{2}$ inches. There are no live metal parts exposed back of the socket. Corrosion and danger of short circuits are eliminated.

Porcelain housings furnished with streethood bodies listed without socket are supplied with screws and nuts for supporting Regent Film Socket No. 21466. This socket is listed also with hood fork and $\frac{3}{4}$ inch rigid male nipple for making combination fixtures of the inverted cone type, and with other fittings for mounting in old style fixtures previously installed. Three films furnished free with each socket.

REACTANCE SOCKETS

Consist of Cutter Mogul Screw Base Streethood Socket with special hood fork supporting a reactance coil connected in shunt with the lamp. These sockets are for use on series lighting systems, and when a lamp fails, the reactance coil compensates for the voltage drop through the lamp, thus maintaining constant current without the use of a regulator. In ordering, state voltage and amperes of circuit and voltage and candle power rating of lamp. Designed only for use with Cutter Inverted Cone Streethood Bodies.

Reactance Socket

List No. 3.5 or 4 Amps. 60 Cycles	List No. 6.6 Amps. 60 Cycles	Candle Power Lamp	Std. Pkg.	Wt., Lbs. Each	List Price Each

20490	20494	80	25	7	7.20

LAMP GRIP MULTIPLE SOCKETS

Cutter Lamp Grip Sockets are designed to meet the severe conditions found in outside service. The intense heat of the Type C lamps subjects the socket to greatly varying temperatures, ranging from several hundred degrees Fahrenheit when the lamp is burning, to below zero when the lamp is out.

These changes in temperature, taking place while the socket shells are under tension, will quickly depreciate their spring qualities and cause them to split, unless they are made sufficiently strong and some provision provided to meet these conditions.

The Cutter Lamp Grip Sockets are equipped with two vertical springs which engage the threads of the lamp collar, reinforce the socket shells and relieve the tension. These vertical springs grip the lamp base and prevent the lamp from working loose when subjected to vibration and the contraction and expansion caused by the variations in temperature.

These springs also create an increase of positive contact between the lamp terminal and the socket.

The terminals are easily accessible and very generously designed.

The use of these sockets will greatly reduce lamp breakage and outages.

CUTTER CENTER SUSPENSION STREETHOODS

With Inverted Cone Streethood Bodies

Consists of a Cutter Inverted Cone Streethood Body supported by a Petite Lamp-supporting Pulley. A Midget Pole Pulley guides the hoisting rope to the bottom of the pole. The Midget Changeable Pulley may be used either as a pole pulley or clamped to cable near the pole. Order pulleys and Inverted Cone Streethood Bodies separately.

List No.	Description	Std. Pkg.	Wgt. Lbs.	List Price Each
20413	Petite Pulley with crossarm.....	50	6½	\$1.80
20414	Midget Pole Pulley.....	100	2¼	.72
20415	Midget Changeable Pulley.....	100	2¼	.84

LOOPED HOODS

Consists of an Inverted Cone Streethood Body with looped crossarm.

With 18 Inch Hood, Paint Enameled

ALWAYS LEVEL STREETHOODS

The two wires leading from the brace arm to the hood make up one side of the suspension, while cords passing over covered pulleys form the other side. Adjusting clamps at the end of each cord are independently drawn up taut and locked together. These parts, together with the Center Hoods listed below, constitute Always Level Streethoods.

EXTRA PARTS FOR ALWAYS LEVEL STREETHOODS

CUTTER STREET FIXTURES

Pulleys and Clamp Knobs

LAMP-SUPPORTING PULLEYS

Holds the lamp when raised and releases it when about to be lowered. Has a long swivel clamp to fit any size suspension wire or cable and a malleable iron clamp knob to hold the lamp. On raising the lamp, this knob is engaged by ridges on the sides of the pulley and takes all the strain off the rope. Another pull at the rope guides the knob out so that the lamp can be readily lowered. The action is entirely automatic. You pull the rope till it reaches a dead stop, and the pulley does the rest. There are no extra catches or fingers to bend out of shape or bind on the casing or to get clogged with sleet. It is the only weatherproof safety pulley that works every time. The clamp knob clamps any size rope up to $\frac{1}{2}$ inch.

Lamp-Supporting
Pulley with
Clamp Knob

Clamp
Knob

List No.	Description	Std. Pkg.	Wt. Lbs.	List Price Each

CUTTER STREET FIXTURES

Miscellaneous Pulleys

Outrigger Pulley

Ceiling Pulley

OUTRIGGER PULLEYS

A form of the lamp-supporting pulley, with a clamp to fit the pipe. Furnished with clamp knob.

List No.	Description	Std. Pkg.	Wt. Lbs.	*List Price Each
20806	For $\frac{3}{4}$ in. (bore) pipe.....	50	9	\$1.74
20807	For 1 in. (bore) pipe.....	50	9	1.80
20808	For $1\frac{1}{4}$ in. (bore) pipe.....	50	10	1.92
20809	For $1\frac{1}{2}$ in. (bore) pipe.....	50	10	1.98

CEILING PULLEYS

A form of the lamp-supporting pulley, with a plate for use on bridges or under beams in shops or yards.

20810	With clamp knob only.....	50	9	\$1.98
20811	With triple insulation arm.....	50	13	3.60
20812	With Jupiter crossarm.....	50	16	4.14

SWIVEL POLE PULLEYS

A weatherproof pole pulley, swiveled so that it can swing sideways and keep in line with the hoisting rope. Has a strong malleable iron pole plate.

20813	100	4 $\frac{1}{4}$	\$0.90
-------	-------	-----	-----------------	--------

JUMBO POLE PULLEYS

Similar to the above, but larger, to take $\frac{3}{4}$ inch rope.

20814	75	5 $\frac{1}{2}$	\$1.32
-------	-------	----	-----------------	--------

DUPLEX POLE PULLEYS

Consists of a pair of swivel pole pulleys fastened to a simple malleable iron pole plate.

20815	50	8	\$1.80
-------	-------	----	---	--------

INTERCHANGEABLE PULLEYS

A weatherproof pulley with a universal clamp made of malleable iron, which will grip any standard size of suspension wire or cable. By taking out the two bolts the clamp can be opened out so as to form a wall plate, which fits the curved surface of a pole and which is easily fastened in place by lag screws. When so used, it makes a swiveled pole pulley similar in action to the Cutter Swivel Pole Pulley.

20816	100	4 $\frac{1}{4}$	\$0.90
-------	-------	-----	-----------------	--------

JUMBO CHANGEABLE PULLEYS

Similar to the interchangeable pulley, but larger, to take $\frac{3}{4}$ inch rope.

20817	75	5 $\frac{1}{2}$	\$1.32
-------	-------	----	-----------------	--------

SLEEVE PULLEYS

A weatherproof pulley with a sleeve clamp to grip iron pipe.

20818	For $\frac{3}{4}$ in. (bore) pipe.....	100	5 $\frac{1}{4}$	\$.96
20819	For 1 inch (bore) pipe.....	100	5 $\frac{1}{2}$	1.02
20820	For $1\frac{1}{4}$ inch (bore) pipe.....	100	5 $\frac{3}{4}$	1.08
20821	For $1\frac{1}{2}$ inch (bore) pipe.....	100	6	1.14

PLAIN ROOF PULLEYS

A companion to the ceiling pulley, with a ceiling plate for bridges, beams, etc.

20822	100	5 $\frac{1}{2}$	\$1.08
-------	-------	-----	-----------------	--------

For galvanizing any of the above, add 50 per cent. to list price.

For warehouse deliveries write nearest house.

Sleeve Pulley

Plain Roof Pulley

CUTTER STREET FIXTURES

Pulleys and Windlasses

Plain End Pulley

Medium Pulley

PLAIN END PULLEYS

A plain weatherproof pulley with an end clamp to fit mast arm pipes.

List No.	Description	Std. Wt. Pkg. Lbs.	*List Price Each
20823	For 1 1/4 in. (bore) pipe.....	100 6 1/2	\$1.08
20824	For 1 1/2 in. (bore) pipe.....	100 6 3/4	1.08

MEDIUM PULLEYS

A center suspension pulley with long supporting clamp and weatherproof casing, but with no safety features. Takes any size rope up to 1/2 inch in diameter and is second only to the Cutter Lamp-Supporting Pulley.

20825	100 5 1/2	\$0.90
-------	-------	-----------	--------

Pole Housing

POLE HOUSING

The pole plate and pulley casing are made in one piece, with the sheaves placed so the rope can run through the pipe, as with the Cutter Inner-Rope and Corporal Mast Arms.

List No.	Description	Std. Wt. Pkg. Lbs.	*List Price Each
20826	For 1 1/4 in. (bore) pipe.....	75 6 1/2	\$1.44
20827	For 1 1/2 in. (bore) pipe.....	75 6 3/4	1.44

Tail Pulley

TAIL PULLEYS

A companion to the pole housing for use with Cutter Inner-Rope and Corporal Mast Arms.

20828	For 1 1/4 in. (bore) pipe.....	75 6 3/4	\$1.08
20829	For 1 1/2 in. (bore) pipe.....	75 7	1.08

Combination Pole Windlass

COMBINATION WALL WINDLASSES

Similar to the combination pole windlass, but with a side plate for fastening to walls.

20834	25 24	\$5.40
-------	-------	-------	--------

COMBINATION POLE WINDLASSES

These are self-locking safety windlasses which can be used either as plain or geared windlasses at the option of the trimmer. Can be used as plain windlass to lower the lamp quickly, and then by inserting the handle further into the drum, changed to a geared windlass to raise the lamp. These windlasses are perfectly safe for heavy lamps, the whole device being made as fool-proof as possible.

The pinion handle is detachable so that it can be used with any number of windlasses.

The drum will hold 60 feet of 1/4 inch Ebony Wire Rope or 40 feet of 3/8 inch Banner Core Rope.

Prices below do not include handle.

Combination Wall Windlass

List No.	Description	Std. Wt. Pkg. Lbs.	*List Price Each
20830	For wood poles	25 22	\$5.10
20831	For 5 in. (bore) pipe.....	25 24	5.40
20832	For 6 in. (bore) pipe.....	25 25	5.70
20833	For 7 in. (bore) pipe.....	25 27	6.00

PINION HANDLES

For combination pole and wall windlasses.

20835	25 4	\$1.80
-------	-------	------	--------

For galvanizing any of the above, add 50 per cent. to list price.

Pinion Handle

HIGH VOLTAGE INSULATORS

High voltage insulators have a double petticoat porcelain bell, which forms a good watershed and gives high insulation even in wet weather. The rivets which fasten the metal cap to the porcelain pass under the elongated head of the bolt which supports the hood, so that this could not drop out even if the porcelain were broken with a hammer. The cap is sealed with insulating material and the extra petticoat gives a large surface insulation, making the device well suited for use on arc circuits exposed to weather, smoke or fumes.

While designed especially for use on arc circuits of high voltage, the extra protection and the elimination of leakage afforded by this insulator make it a desirable one, even for circuits of comparatively low voltage.

List No.	Description	Std. Pkg.	Wt., Lbs. Each	*List Price Each
20836	With ring above and sister hook below.....	100	4	\$1.08
20837	With ring above and ring below.....	100	4	.96
20838	With clamp for wire rope above and with sister hook below.....	100	4	1.32
20839	With clamp for wire rope above and with ring below.....	100	4	1.20
20840	With clamp for chain above and sister hook below.....	100	4	1.38
20841	With clamp for chain above and ring below.....	100	4	1.20

For galvanizing all iron parts, add 24 cents each to list price.

JUPITER INSULATORS

Built on the same lines generally as high voltage insulators, but with a greatly enlarged series of petticoats to give higher surface insulation. Therefore it has the same high breakdown insulation (ample for 12000-volt circuits) and an extra large surface to reduce the leakage in wet weather.

20844	With ring above and sister hook below.....	75	6	\$1.62
20845	With ring above and ring below.....	75	6	1.50

For galvanizing all iron parts, add 24 cents each to list price.

TREE INSULATORS

A simple, strong tree insulator with wrought iron base, galvanized. Will take wires up to $\frac{3}{4}$ inch in diameter.

List No.	Std. Pkg. Dozen	Wt., Lbs. per Doz.	*List Price per Doz.
20846	25	12	\$4.32

MAMMOTH TREE INSULATORS

Similar to the above, but for wires up to $1\frac{1}{4}$ inches in diameter.

20847	12	40	\$9.60
-------	----	----	--------

SWINGING INSULATORS

Swinging insulators allow the wire to move freely between porcelain rollers without chafing the insulation. Being hung from the loop, it is free to adapt itself to any strains, and therefore will not cramp the wire, as the bracket base tree insulators often do. Strongly made of malleable iron, takes wires up to $\frac{3}{4}$ inch diameter.

20848	Painted.....	25	15	\$4.32
20849	Galvanized.....	20	16	5.40

JUMBO SWINGING INSULATORS

Similar to the above, but for wires up to $1\frac{1}{4}$ inches in diameter.

20850	Painted.....	12	55	\$9.60
20851	Galvanized.....	6	55	17.40

CUTTER STREET FIXTURES

Insulators and Cross-Arms

TRIPLE INSULATION ARMS

Triple insulation arms have a high voltage insulator above an enameled wood arm, thus giving a triple insulation between the line wire and the supporting ring.

The arm is coated with a baked enamel, which outwears paint in the weather, and has its ends bound by strong metal ferrules to prevent their splitting. Every part of the whole device is built for fine wear and high insulation, making it a fine insulating arm for all high voltage lamps, and the only low priced one adapted for use with alternating series lamps. It is second only to the Jupiter Cross-Arm.

Triple Insulation Arm

List No.	Finish	Std. Pkg.	Wt., Lbs. Each	*List Price Each
20852	Enameled.....	75	5	\$1.62
20853	Galvanized.....	75	5	1.92

HIGH VOLTAGE CROSS-ARMS

High voltage cross-arms combine the high voltage insulator with a well-built insulating spreader arm, making a fine insulating arm for use over arc lamps. The arm proper is of wood, coated with a baked enamel, which keeps it dry and high insulating. Each end is bound by a malleable iron ferrule, which keeps the wood from splitting in case a heavy strain is put on the screws holding the porcelain insulators in place. The latter are deep grooved as illustrated.

The supporting ring is of malleable iron and all the parts are built just right to make this a good insulating arm, though not equal to the Triple Insulation Arm or Jupiter Cross-Arm.

High Voltage Cross-Arm

List No.	Finish	Std. Pkg.	Wt., Lbs. Each	*List Price Each
20854	Enameled.....	75	5	\$1.50
20855	Galvanized.....	75	5	1.80

JUPITER CROSS-ARMS

An insulating cross-arm having both the wire supports and the lamp hook insulated from the support by a Jupiter Insulator. The cross-arm is enameled and metal-bound and has deep grooved knobs at each end.

The ideal insulating arm for use on high voltage circuits.

List No.	Finish	Std. Pkg.	Wt., Lbs. Each	*List Price Each
20856	Enameled.....	50	7	\$2.16
20857	Galvanized.....	50	7	2.46

Jupiter Cross-Arm

AJAX CROSS-ARMS

An insulating cross-arm having both the wire supports and the lamp hook insulated from the support by a Jupiter Insulator. The cross-arm is of iron, fitted with porcelain knobs for supporting the line wires and a locking sister hook for the lamp.

List No.	Finish	Std. Pkg.	Wt., Lbs. Each	*List Price Each
20858	Enameled.....	50	10	\$2.16

GRIP ARMS

Consists of the plain arm with a "U" bolt for clamping same to 1¼ inch (bore) iron piping as used on mast arms, outriggers and brackets.

List No.	Finish	Std. Pkg.	Wt., Lbs. Each	Price Each
20863	Enameled	200	1¾	\$0.48
20864	"U" bolt galvanized	200	1¾	.54

ECONOMY ARMS

A common sense crossarm for use where the insulation is not important. Similar to the grip arm, but with sister hook.

List No.	Finish	Std. Pkg.	Wt., Lbs. Each	Price Each
22441	Enameled	200	2	\$0.60
22442	Iron parts galvanized	200	2	.72

FEATHERWEIGHT SPREADERS

Featherweight spreaders are readily fastened to the wires running to suspension lamps, so as to keep them at a distance of 18 inches from each other. Made of enameled wood, metal tipped, with porcelain insulators. Weighs less than 8 ounces.

List No.	Finish	Std. Pkg.	Wt., Lbs. Each	Price Each
20865	Enameled	200	¾	\$0.30

GUIDE SPREADERS

Same as the above, with a collar to clasp the suspension cable. Keeps the line wires 18 inches apart and in line with the suspension strand.

List No.	Finish	Std. Pkg.	Wt., Lbs. Each	Price Each
20866	Enameled	200	1	\$0.48
20867	Collar galvanized	200	1	.54

STRAIN ARMS

As Furnished on Junior and Cadet Mast Arms

Strain arms are made of wrought iron with a cast iron pole plate.

List No.	Std. Pkg.	Wt., Lbs.	Price Each
20746	100	8½	\$1.44

DOUBLE-BRACED STRAIN ARMS

As Furnished on Long Junior Mast Arms

Double-braced strain arms are longer than the regular strain arms and have side braces to prevent rocking in high winds.

List No.	Std. Pkg.	Wt., Lbs.	Price Each
20747	50	10	\$2.40

For warehouse deliveries write nearest house.

CUTTER POLE LINE MATERIAL

Rope Cleat

Pole Lock

POLE LOCKS

Has the keyhole at the bottom and not at the top (where the rain and sleet would drive into it). The double catch makes it non-pickable, the back fits either a wall or a pole, and the casting makes it weatherproof. Just the thing to prevent tampering with hoisting ropes. One key free with every ten locks.

List No.	Finish	Std. Pkg.	Wt. Lbs.	*List Price Each
20868	Painted.....	100	1½	\$0.90
20869	Galvanized.....	100	1½	1.02
20870	Extra key.....	25	1 oz.	.24

ROPE CLEATS

Strong and neat (though no cleat with its coil of rope makes as neat a job as the rope clamp and pole lock). Has the edges rounded so as not to cut the rope.

20871	Galvanized.....	200	1	\$0.36
-------	-----------------	-----	---	--------

ROPE CLAMPS

Made of malleable iron, will readily clamp any size rope up to ¾ inch, enabling the end of the hoisting rope to be locked at the pole. Can be used over and over again when the rope wears out.

20872	Painted.....	400	¼	\$0.22
20873	Galvanized.....	400	¼	.28

½-Inch Rope Clamps

Same as above, for ½-inch ropes.

20874	Painted.....	400	¾	\$0.24
20875	Galvanized.....	400	¾	.30

CHAIN CLAMPS

A neat, secure fastening, enabling the end of the hoisting chain to be locked to the pole. Made for No. 1 or No. 3 Oneida Chain.

20876	Painted.....	400	½	\$0.22
20877	Galvanized.....	400	½	.28

BANNER CORE ROPE

A fine braided cotton rope with a weatherproof finish, which keeps out the rain and makes it extra durable. We recommend the ¾ and ½ inch sizes for hoisting arc lamps, the ¼ and ⅜ inch for use with the swinging hoods and the ⅜ inch for the Always Level Streethood.

List No.	Size Inches	Wt., Lbs. Std. Pkg.	Approx. Wt., Lbs. per 100 Ft.	*List Price per Lb.
20878.....	¾	100	2	\$0.88
20879.....	½	100	2½	.88
20880.....	¼	100	3½	.88
20881.....	⅜	100	5	.88
20882.....	½	100	8	.88

Banner Core Rope

Ebony Wire Rope

EBONY WIRE ROPE

A ¼ inch wire rope made of six flexible strands (each with soft center) around a flexible (black) center. The only wire rope really pliable enough to work freely with standard types of pulleys.

List No.	No. of Feet in Std. Pkg.	Approx. Wt., Lbs. per 100 Ft.	*List Price per Ft.
20883	1000	5	\$0.08

TRIMMER'S ROPE

Trimmer's rope is a 30-foot hoisting rope, with a snap hook at one end and six rings near the other end. The rings can be readily clamped at any desired intervals, so as to accommodate lamps hung at varying heights above the street. Just the thing for use with hoisting ropes, ending in a Cutter Rope Clamp and locked with a Cutter Pole Lock.

CUTTER SOL-LUX FIXTURES

For Type C Lamps—Bracket Styles

Standard Package Quantity, 20 of One Style or Trade Number

For 500 watt or smaller Type C lamps, use 6 x 10 inch opal globe or 6 x 8 inch Stalacite; for larger lamps, use 8 x 12 inch opal globe or Acorn Diffuser.

STANDARD BRACKETS WITH SOL-LUX HOLDERS

A simple form of bracket suspension, consisting of a 3 foot gooseneck of $\frac{1}{2}$ inch pipe, with grooved wall plate, for inner wiring.

The Sol-lux holder attached to the outer end is made of copper with gun metal finish. Furnished with Cutter Grip sockets, but not wired.

IVANHOE METAL REFLECTORS

No. 646

Nos. 649 and 699

No. 645

Units for 400, 500, 750, 1000 Watt Mazda Lamps

Unit No. 646 is designed for either indoor or outdoor use. It is suitable for the exterior lighting of shop fronts and will be used to a certain extent for shop interiors. The unit is finished in white porcelain enamel on the interior and green porcelain enamel on the outside.

Nos. 649 and 699 are new units for outdoor lighting with 400, 500, 750 and 1000 watt multiple Mazda lamps. These units are finished with white porcelain enamel inside and outside.

For store fronts, moving picture show entrances and similar locations where a "white way" effect is desired, this effect is best obtained by unit No. 645. The unit is weatherproof, substantial in construction and neat in appearance. It is tapped for $\frac{1}{2}$ inch pipe suspension.

Unit No. 715 is composed of a metal reflector canopy and a Holophane Prismatic internal glass refractor. This internal refractor gives a broad, efficient distribution of light, is easily cleaned, as it is smooth on both sides, and is protected from bugs by a screen in the bottom. This unit has a wide application for multiple street lighting.

Finish: Dark heat-resisting japan only.

BENJAMIN STREET FIXTURES

No. 5471—45 Degrees

Schedule 2

Fixtures Nos. 5471-5481 have porcelain-lined weatherproof socket enclosed within a copper hood, firmly attached 15 inch porcelain enameled steel reflector, 4 inch aluminum globe holder, either 5 inch or 7 inch deep globe, gooseneck of $\frac{1}{2}$ inch iron pipe formed at an angle of 45 degrees, and wall or pole fitting. Unless otherwise specified, wall fitting is regularly supplied. Iron parts are black enamel. The device measures 39 inches from pole to lamp center. 5 inch globes will take 32 C.P. carbon filament, or 40-watt short base Mazda lamps; 7 inch globes, 60-watt Mazda lamps. For fixture less gooseneck and fitting deduct \$1.08 list.

List No.	Description	List Price
5471	Complete, with 5 x 4 inch globe.....	\$5.04
5481	Complete, with 7 x 4 inch globe.....	6.00

No. 1288

No. 1252

Schedule 2

Fixtures Nos. 1282-1288 have 18 inch flat cone reflector. The open wiring with series film cut-out socket, and 40 inch gooseneck of $\frac{3}{4}$ inch iron pipe with pole fitting is shown. They are intended for 100-watt lamps. 20 inch reflectors for 250-watt lamps may be ordered at an advance of 72 cents list; 22 inch reflectors, for 500-watt lamps, at an advance of \$1.44 list.

List No.	Description	List Price
1282	Reflector and multiple medium base socket only, concealed wiring.....	\$5.40
1284	Complete, with 40 inch gooseneck, concealed wiring.....	6.96
1286	Reflector and multiple Mogul base socket only, open wiring.....	6.00
1288	Complete, with 40 inch gooseneck, open wiring.....	7.56

Schedule 2

Fixtures Nos. 1246-1256 have 18 inch one-piece radial wave reflector with beaded edge. The usual raw surface of the latter is therefore eliminated, thus affording protection against the incursions of rust. The open wiring with cast iron cover, crossarm with porcelain knobs, and 40 inch gooseneck of $\frac{3}{4}$ inch iron pipe with pole fitting is shown. They are intended for 100-watt lamps. 22 inch reflector for 250 to 500-watt lamps may be ordered at an advance of \$1.44 list.

INSULATING MATERIALS

Insulating Tapes

VICTOR TAPES

Victor Tape

These are commercial grades of tape which we furnish regularly in half-pound rolls, $\frac{3}{4}$ inch wide. We furnish under this same brand both a friction tape and a rubber splicing compound. Therefore it is always necessary to specify whether friction tape or splicing compound is desired. The standard width of all tapes is $\frac{3}{4}$ inch, but on special orders we can furnish the Victor friction tape either $\frac{1}{2}$ inch, 1 inch, $1\frac{1}{4}$ inches, $1\frac{1}{2}$ inches or 2 inches wide.

Armature Coil Tape

Is an extra fine quality of thin tape necessary to secure the best results in armature work. This tape is made of white sheeting with a white compound. The compound contains a large percentage of pure Para gum and will stand a very high insulation test.

List No.	Thickness, Ins.	Width, Ins.	List Price per Lb.
460014	.011	$\frac{3}{4}$	\$1.00

Field Coil Tape

Is used to insulate cable connections and street railway field coils. It is coated on one side with a sticky friction coat and on the other by an even coat of rubber. The cloth base is a strong heavy drilling. It is absolutely water and acid proof and will not deteriorate or change with age.

List No.	Approx. Thickness, Ins.	Width, Ins.	List Price per Lb.
460015	.025	$1\frac{1}{2}$	\$0.70

SOLDERING ACCESSORIES

Western-Electric Soldering Paste

This is a superior quality of soldering paste. It will not corrode or injure in any way the material that is to be soldered. It takes the place of injurious acids and is equally effective. It may be applied with a rag, a stick or even with the fingers. It is particularly intended for those who prefer a soldering flux in paste form rather than the soldering stick, and in cases where it is inconvenient to heat the joint in order to apply the stick flux.

List No.		List Price Each

Tube Flux

A soldering flux, not a substitute for solder. A non-corrosive soldering flux put up in convenient form. The spout in the tube is aluminum and allows the paste to be applied directly to the joint at the same time with the heat without soldering up the vent. This is an important feature.

SOLDERING ACCESSORIES

Soldering Salts

Our soldering salt combines in soluble crystal form the most efficient soldering agents known to chemistry. It dissolves readily in water and does not give off any obnoxious odors or gases. Directions for dissolving in water to make a soldering agent of proper strength are included with each package.

CENTRAL STATION SUPPLIES

Trotter's Commutator Compound

This compound is an article of merit. Particularly adapted as a lubricant for carbon or woven wire, dynamo or motor brushes. A very small application required.

List No.		List Price
460068	Small size sticks $4\frac{1}{2} \times \frac{5}{8}$ ins.	Each \$0.34
460069	Large size sticks $4\frac{1}{2} \times \frac{3}{4}$ ins.	Each .68

Allen's Commutator Lubricant

The Allen Commutator Lubricant contains no acid or destructive ingredient; is made of pure chemicals, and can be safely used on dynamos generating high potentials. Whenever cutting, heating, sparking, or wearing of the commutator is noticed, a very slight application of the Allen Commutator Lubricant to the revolving surface of the commutator will restore a normal working condition and give a "bright, clean face."

Insulating and Soldering Materials

INSULATING MATERIAL

Treated Papers

Also Known as Empire Papers

The treated papers listed below are very complete, especially so in regard to their wide range of thickness.

The papers forming the bases all possess the greatest tensile strength consistent with their thickness and have been selected for their uniformity of thickness and freedom from deleterious chemicals such as sulphite, etc.

Treated cement paper consists of a long-fibred flexible strong rope cement paper so impregnated as to have a smooth hard surface and yet to retain its flexibility. It is used for armature, field, and transformer coil insulation. Paraffined express paper is of a good grade of express paper thoroughly impregnated with paraffine to exclude moisture.

Paraffined fishpaper consists of fishpaper thoroughly impregnated with paraffine to exclude moisture and to make it more convenient in handling. Treated fullerboard is not only coated but thoroughly impregnated. Used for washers, winding coils, spacing strips, transformer insulation, etc.

Impregnated Paper Tape

Impregnated Paper Tape consists of pure manila paper which has been dried in a vacuum and impregnated with a special cable compound and is recommended for splicing saturated paper insulated cable for electric light and power work.

Furnished in 1-lb. rolls in air-tight cans.

List No.	Description	List Price per Roll
460119	1-in. Impregnated Paper Tape.....	\$0.50

"Numica" Paper Tape

No. 14 "Numica" paper tape consists of a paper faced on one side with overlapping layer of carefully selected white mica films.

Principally used for insulating armature coils and bars in conjunction with Linotape or the ordinary friction tape.

No. 15 "Numica" paper tape is similar to No. 14 except that the mica layer is faced on both sides with tissue paper, adding slightly to its thickness and mechanical strength.

Western Electric

Varnished Tape

Also Known as Linotape or Oiled Linen Tape

An electrical insulating tape extensively used in coil winding, cable splicing and other high tension work, having high insulating and moisture resisting qualities. The coating consists of films of oxidized linseed oil, and is furnished straight or bias cut, in rolls containing 72 lineal yards, each roll coated with paraffine to exclude moisture.

NOTE: The thickness is .010 in. Approximate weight 1 in. wide, 2 1/4 lbs. per gro. yds.

Unless otherwise specified, biased tape will be furnished. Can be furnished .007 in. or .012 in. thick.

Insulating and Soldering Materials

INSULATING MATERIAL

Untreated Papers

Fyberoid or Fish paper is a very tough, strong, specially prepared paper, somewhat resembling hard fibre but considerably more flexible.

Express paper is a high-grade wood-fibre paper.

Red-Rope paper is manufactured from an all hemp stock, free from pin holes, and guaranteed to contain no wood pulp.

Japanese paper is an extremely thin, soft finish paper running from .00075 in. to .001 in. thick.

Fullerboard is a dense material like cardboard; less hard and stiff than hard fibre, and more easily worked.

Untreated Cloths

Cambric is a high grade of cotton cloth. It is so treated in manufacture that the nap does not rise in varnishing.

Muslin is a soft-finished thin cotton cloth.

Cotton cloth or sheeting is a strong, close-woven unbleached cotton cloth made up without starch and with a soft finish.

Linen cloth is a good grade of strong unbleached linen cloth of rather coarse weave.

Drill is a weight between sheeting and 8-oz. duck. It has great strength, of soft finish and without starch filling.

Put up in 10 lb. units and special 5 and 1 lb. units.

Plain Linen Tape

This is a good quality of calendered linen tape without friction or insulating compound. It is regularly furnished in rolls containing 36 lineal yards or will be furnished in other lengths when desired.

List No.	Mfr. No.	Width, Ins.	Thickness Ins.	List Price Gr.Yds.	List No.	Mfr. No.	Width, Ins.	Thickness Ins.	List Price Gr.Yds.

BINDING TAPES

Stay Binding or Webbing

This is a plain cotton webbing somewhat heavier and stronger than the ordinary cotton tape. It is used largely for field coil winding. Furnished in rolls containing 72 lineal yards. Made in two weights as listed below:

Regular					Heavy				
List No.	Mfr. No.	Width Inches	Thickness Inches	List Price Gr. Yds.	List No.	Mfr. No.	Width Inches	Thickness Inches	List Price Gr. Yds.

"DELTA" INSULATION**"Delta" Tape**

"Delta" tape is particularly adapted for railway, motor and controller work where high temperature and severe conditions are to be met. It is a heat-resisting insulating material, having asbestos fibre as a base. Due to this fact and the special compound used for impregnation, the tape can be raised to a temperature of 500° Fahr., before decomposition begins.

The flexibility of "Delta" tape is practically permanent, which makes it a desirable material for forming around corners and terminals of coils.

Electrically it is an admirable insulator, although at the same time a good conductor of heat. Therefore a coil wrapped with it, though thoroughly insulated, is not blanketed so as to make it retain heat.

"Delta" Insulating Varnish

"Delta" Insulating Varnish is a compound for insulating coils designed to run at high temperatures. It has the property of rendering cotton and other carbonizable coil coverings much more heat-resisting than they otherwise would be. This fact makes it well adapted for insulating ordinary cotton insulated coils of the non-heatproof variety. It was developed to meet the requirements of a compound for asbestos insulated heatproof armature, field and special coils. For this purpose it has no equal because of its high melting point. Yet at ordinary temperatures it is not brittle like the so-called synthetic insulating materials which will stand high temperatures, but which are glass hard in ordinary use. The varnish is applied by dipping the coils in it and baking them. This treatment gives them a smooth, glossy, black finish of unsurpassed insulating quality.

List No.		Less Barrel Lots	Barrel Lots	Five-Barrel Lots
460291	Insulating Varnish, per gallon.....	\$2.38	\$1.90	\$1.72

"Delta" Plastic Compound

"Delta" Plastic Compound is used for smoothing the surface and filling cavities of field coils prior to applying the outer insulation. Applied as a paste it becomes very hard and tough after baking. It is an excellent insulator, a good conductor of heat, one of the best binders known, will not reduce to powder in service, will not soften at any ordinary temperature, and is unaffected by oil or grease. The best results are obtained by using as fresh as possible and to that end it is put up in five-pound cans.

"Niagrite" Cable Tape

"Niagrite" cable tape is a flexible, fireproof felt tape, made of asbestos, in strips three feet long and three inches wide. It is applied by means of fireproof and waterproofing compound which thoroughly impregnates the tape, forming a solid, one-piece casing which becomes as hard as stone when dry. Used for insulating feeder cables in tunnels, and on rear of switchboards for insulating feeder cables and wires as a protection against fires.

List No.	Description	List Price per 1000 Ft.

Transite Fireproof Lumber

Transite Fireproof lumber is adapted to general forms of construction where ordinary wood has been used and where absolutely fireproof structures are desired. It is as readily applied to metal as to wooden frame construction. It is used for lining the bottom of electric cars and in general car construction, such as flooring, coving, roofing, and general panel work. In addition to being fireproof it is permanently moisture-resisting and is not affected by extremes of temperature from the coldest to the hottest weather. Standard size sheets all thicknesses, 36 in. x 48 in., 42 in. x 48 in., and 42 in. x 96 in.

Ebony Asbestos Wood

Ebony Asbestos Wood is composed of asbestos fiber and other insulating and waterproofing materials. As an insulating product it is far superior to either slate or marble in mechanical strength and electrical resistance. It is recommended for switchboards and panelboards, bus bar barriers, rheostat tops and insulating bases for all electrical purposes.

Standard size sheets 36 x 48 inches and 42 x 96 inches.

Unless color is specified, shipment will be made at option of manufacturer to facilitate delivery or give best quality.

Hard Vulcanized Fibre Rods

Colors Red, Black and Gray

These are turned from the sheet goods. There is no economy in cutting them into sections to make washers or discs, and they are not intended to be used for gears or gear blanks, as they will not answer for that purpose. Adapted for making plugs, bushings, handles, pins, dowels, etc. In red, gray and black colors.

Unless color is specified, shipment will be made at option of manufacturer to facilitate delivery or give best quality.

Insulating and Soldering Materials

INSULATING MATERIAL

"Numica" Plates

Numica plates are made of the best white and amber mica and are suitable for all general purposes such as commutator rings, armature slots, spools, etc.

NO. 1 "NUMICA" PLATES

No. 1 Numica plate is made of very thin films of white mica cemented together with pure shellac and carefully surfaced to a uniform thickness. When heated it softens and becomes flexible and is readily moulded to any form. It is used for armature slots and commutator rings but should not be used for commutator segments. Standard size 18 in. x 36 in. sheets.

List No.	Mfr. No.		List Price per Lb.	List No.	Mfr. No.		List Price per Lb.
460395	1	White Mica .025" and thicker	\$1.75	460396	1	White Mica .025" and thinner	\$2.25

NO. 11 "NUMICA" PLATES

No. 11 Numica plate is of the same quality material as No. 1 plate, but not quite as exact to thickness. It is suitable for all general purposes where a slight variation in thickness is permissible, except commutator segments. It should not be used between the copper bars of commutators. Standard size 18 in. x 36 in. sheets.

List No.	Mfr. No.		List Price per Lb.	List No.	Mfr. No.		List Price per Lb.
460397	11	White Mica .025" and thicker	\$1.50	460398	11	White Mica .025" and thinner	\$1.75

NO. 2 "NUMICA" PLATES

No. 2 Numica plate is made of very thin films of white mica cemented together with the smallest possible amount of pure shellac, and carefully surfaced to a uniform thickness. It is specially made to be cut into segments for insulating copper bars of commutators, and cannot be moulded. Standard size 18 in. x 36 in. sheets.

List No.	Mfr. No.		List Price per Lb.	List No.	Mfr. No.		List Price per Lb.
460399	2	White Mica .025" and thicker	\$2.00	460400	2	White Mica .025" and thinner	\$2.50

NO. 22 "NUMICA" PLATES

No. 22 Numica plate is of the same quality material as No. 2 and differs only in that the variation in thickness is not confined to such close limits. It is used for commutator bar insulation but cannot be moulded. Standard size 18 in. x 36 in. sheets.

List No.	Mfr. No.		List Price per Lb.	List No.	Mfr. No.		List Price per Lb.
460401	22	White Mica .025" and thicker	\$1.75	460402	22	White Mica .025" and thinner	\$2.25

NO. 3 AMBER "NUMICA" PLATES

No. 3 Numica plate is made of very thin films of Canadian amber mica, cemented together with pure shellac and carefully surfaced to a uniform thickness.

On account of its being soft it wears away with the copper of a commutator and is therefore recommended for that purpose. Standard size 18 in. x 36 in. sheets.

List No.	Mfr. No.		List Price per Lb.	List No.	Mfr. No.		List Price per Lb.
460403	3	Amber Mica .025" and thicker	\$2.75	460404	3	Amber Mica .025" and thinner	\$3.25

INSULATING MATERIAL

"Numica" Plates—(Continued)

NO. 33 AMBER "NUMICA" PLATE

No. 33 Numica plate is made of the same quality of Canadian amber mica films and shellac that is used in No. 3 plate. It differs only in that the variation in thickness is not confined to such close limits. In practice it gives splendid service for commutator work. This plate cannot be molded. Standard size 18 in. x 36 in. sheets.

List No.	Mfr. No.		List Price per Lb.	List No.	Mfr. No.		List Price per Lb.
460405	33	Amber Mica .025" and thicker	\$2.50	460406	33	Amber Mica .025" and thinner.....	\$3.00

NO. 4 "NUMICA" PLATE

No. 4 Numica plate is made for flat work and for purposes where extreme accuracy of thickness is not important. It is suitable for all kinds of bases, round and square washers, and for all kinds of apparatus not subjected to high heat. Its non-liability to fracture under extreme vibration is a valuable feature for marine work. It does not take a screw thread, but can be drilled and turned.

List No.	Approx. Thickness	Approx. Lbs. per Sheet	List Price per Lb.	List No.	Approx. Thickness	Approx. Lbs. per Sheet	List Price per Lb.

Flexible "Numica" Plate

NO. 5 FLEXIBLE PLATE

No. 5 Flexible Numica plate is made of very thin films of white mica cemented together with a special insulating cement of great flexibility and adhesiveness. It can be formed or bent to shape without the application of heat. It is an excellent insulator for armature slots, magnet and commutator cores, transformers, field coils, etc. Standard size 36 in. x 36 in. sheets.

"Numica" Cloth

No. 6 Numica cloth is made with 1, 2, or 3 layers of high-grade white mica films carefully cemented together with overlapping edges in sheet form, the sheet being faced on one side with cotton cloth and on the other side with Japanese paper. It is an excellent composite insulation, and is often used in conjunction with Empire cloth and paper, fish paper, etc., for transformers, field magnets, armature core, etc.

No. 7 Numica cloth is identical with No. 6 except that the material is made with a very thin rubber tissue as a binder between the layers of mica, cloth and paper.

INSULATING MATERIAL

"Numica" Paper

No. 8 Numica paper is of the same nature as No. 6 Numica cloth except that the material is faced on both sides with Japanese tissue paper instead of cotton cloth, the object being to supply an insulation thinner than Numica cloth, but retaining the same thickness of mica film.

No. 9 Numica paper is extra flexible and similar to No. 8 except that the material is made with a very thin rubber tissue as a binder between the layers of mica, cloth and paper, instead of an oil varnish, which is used in the No. 8 Numica paper.

NO. 13 FISH PAPER AND MICA

This material consists of fish paper, faced on one side with two overlapping layers of white mica films and tissue paper. The fish paper employed is also known as Fyberoid, Tarpon Paper, Peerless Paper, etc.

This insulation is recommended when a material stronger than rope paper or pressboard is desired as a base for the mica films.

Furnished in sheets 36 inches x 47 inches.

Linen Armature Twine

Linen Armature twine is made of the finest quality of linen twine and is used in connection with armature work. Unless otherwise specified the standard size No. 8 will be furnished. Put up in tubes containing one pound each.

List No.	Description	List Price per Lb.
460841	Linen Armature Twine.....	\$2.10

Samson Armature Cord

Samson Armature Cord is used for various purposes in connection with armature and field winding. It is made of solid braided cotton armature cord ¼ inch in diameter; will not kink or ravel. Furnished in coils containing 1,000 yards.

List No.	Description	List Price 1000 Yds.
460842	Samson Armature Cord No. 4.....	\$14.00

Chatterton Compound

Chatterton Compound is manufactured in two grades: domestic and imported. The domestic grade is made of a good serviceable quality of gutta-percha and has a high melting point. The imported grade contains the best quality of gutta-percha, is waterproof and very elastic, having a high melting point. They come in stick form and are applied by simply heating with a blow-torch to a soft stringy consistency and winding around the joint or other part to be insulated.

Insulating and Soldering Materials

Western Electric

AJAX INSULATING MATERIAL

Western Electric Ajax Insulating Varnish

BLACK AIR DRYING

A jet black, lustrous moistureproof varnish, a good insulator, and possesses the maximum amount of elasticity possible to secure in a black, quick, air drying varnish. It is used for dipping new armature and field coils and also for repair work requiring a varnish which will dry quickly without baking. It air dries in one-half hour.

List No.		*List Price Per Gal.
461002	Barrels (50 gallons).....	\$1.30
461003	5 gallon cans.....	1.92
461004	1 gallon cans.....	2.52

Western Electric Ajax Air Drying Finishing Varnish

A lustrous, deep black spirit finishing varnish, oilproof, waterproof, durable, it keeps in perfect solution. It is used as a finishing coating for all kinds of electrical apparatus to prevent absorption of lubricating oils and moisture. It air dries in from 10 to 15 minutes independent upon method of application and thickness of coat.

461005	Barrels (50 gallons).....	\$2.80
461006	5 gallon cans.....	4.40
461007	1 gallon cans.....	4.80

Western Electric Underwriters' Black ACID RESISTING INSULATING PAINT

This paint gives a high gloss finish which is flameproof and impervious to moisture. It is used for meter boards, switchboards, moldings, aerial and underground cables, service boxes, street car trucks, motor frames and all kinds of electrical wiring. It air dries in one half hour.

461008	Barrels (50 gallons).....	\$1.28
461009	5 gallon cans.....	2.00
461010	1 gallon cans.....	2.40

Western Electric Ajax Insulating Varnish CLEAR, QUICK BAKING

Designed expressly for quick repairs to motor, generator and transformer windings. For bare metal surface and sheet fiber of every description. It is clear oil and weatherproof, extremely penetrative and elastic. It is a high insulator, and is acidproof and free from acids.

461011	Barrels (50 gallons).....	\$2.10
461012	5 gallon cans.....	3.40
461013	1 gallon cans.....	3.80

Western Electric Ajax Oilproof Core Plate Baking Varnish

Elastic, heat resisting, clear enamel, proof against oil, water and acid. It is used for separating and insulating the metal laminations used in building up the cores of oilcooled transformers. Baked in 5 minutes at 250 degrees Fahrenheit.

461014	Barrels (50 gallons).....	\$1.76
461015	5 gallon cans.....	2.60
461016	1 gallon cans.....	3.00

Western Electric Ajax No. 1 Clear Air Drying Insulating Varnish

It is clear, elastic, extremely penetrative and oilproof. Is a high insulator, and produces a uniform homogeneous film. Especially adapted for use in electrical repair shops not equipped with baking facilities. Used for armature, field and magnet coils, molding, switch bases and fiber sheet insulation. Air dries in 6 hours.

461017	Barrels (50 gallons).....	\$1.92
461018	5 gallon cans.....	2.80
461019	1 gallon cans.....	3.20

Western Electric Ajax No. 2 Clear Air Drying Insulating Varnish

Similar to No. 1, but is superior to it in flexibility, moisture proof and oilproof qualities and heavier in body. Air dries in 13 to 20 hours.

461020	Barrels (50 gallons).....	\$2.40
461021	5 gallon cans.....	3.40
461022	1 gallon cans.....	3.80

Western Electric

AJAX INSULATING MATERIAL

Western Electric Ajax Clear Air Drying Finishing Varnish

Ajax clear insulating varnish is oilproof, waterproof, durable and keeps in perfect solution. It is used as a finishing coating for all kinds of electrical apparatus to prevent absorption of lubricating oils and moisture. It air dries in from 10 to 15 minutes, dependent on method of application and thickness of coat.

List No.		List Price per Gal.
461023	Barrels (50 gallons)	\$2.80
461024	5 gallon cans	4.40
461025	1 gallon cans	4.80

Western Electric Ajax, Black Air Drying Core Plate Varnish

Designed exclusively for the insulation of armature, field and air cooled transformer laminations against Eddy or Foucault currents. Coat of usual thickness will air dry in 5 minutes.

461026	Barrels (50 gallons)	\$1.30
461027	5 gallon cans	2.40
461028	1 gallon cans	2.80

Western Electric Ajax Insulating Varnish Coillac

A black baking insulating varnish for general coil work and insulating purposes. Combines high gloss with great elasticity and puncture resistance.

461029	Barrels (50 gallons)	\$2.08
461030	5 gallon cans	3.00
461031	1 gallon cans	3.40

Western Electric Ajax Black Acidproof Paint

This is an acidproof, waterproof and flameproof paint. Designed for use on battery boxes, switchboards, switch handles, cable connections and connection boxes. Also adapted for use on armature and field coils in repair shops not equipped with baking ovens. It air dries in 8 hours.

461032	Barrels (50 gallons)	\$1.12
461033	5 gallon cans	2.00
461034	1 gallon cans	2.40

Western Electric Ajax Black Elastic Baking Insulating Varnish

Black, plastic, oilproof, suitable for insulating high voltage, generator windings, oil cooled transformer coils and street railway motor armature and field coils which are subjected to continued vibrations and varying loads.

461035	Barrels (50 gallons)	\$2.10
461036	5 gallon cans	3.40
461037	1 gallon cans	3.80

Western Electric Ajax Clear Elastic Baking Insulating Varnish

A clear, tough, elastic, high heat resisting varnish. Designed expressly for insulating—form wound armatures and field coils that are brushed while winding and as finishing—coat for completed armatures and field coils. Excellent material for treating automobile ignition cables, canvas linen, cotton tapes, etc.

461038	Barrels (50 gallons)	\$2.24
461039	5 gallon cans	3.60
461040	1 gallon cans	4.00

Western Electric Ajax Black Quick Baking Insulating Varnish

Elastic, high gloss, quick baking varnish, oil and waterproof. Adaptable for quick repairs to motors, generators, transformers, and as insulator for high voltage windings of large cross sections.

461041	Barrels (50 gallons)	\$1.82
461042	5 gallon cans	3.00

Insulating and Soldering Appliances

BRYANT SPECIAL FEATURES FOR SOCKETS

SCHEDULE "B"

Sockets with
Extra Long Keys

Sockets with
Metal Keys

Sockets for
Special Metal Keys

Pull Sockets with
Extension Chain Guides

† Sockets with Extra Long Keys

The key sockets listed in this Bulletin have keys $\frac{3}{4}$ inch long, but can be fitted with longer keys on special order, which must specify distance desired between outside of shell and end of key.

The following lengths are carried in stock:

1 inch, same price and standard package as regular. Sockets with $\frac{3}{4}$ inch and 1 inch keys may be assorted to make up standard package quantity. Sockets with keys longer than 1 inch may not be assorted with sockets having $\frac{3}{4}$ inch and 1 inch keys to make up standard package quantity.

$1\frac{1}{4}$, $1\frac{1}{2}$, 2 and $2\frac{1}{2}$ inches, add to list price of Standard sockets, 6 cents. Standard package, 100 of one length. On orders for sockets with extra long keys, where the length is not given, we furnish $1\frac{1}{2}$ inch.

† Sockets with Metal Keys

We are prepared to fit to any key socket in this Bulletin a metal key as shown in illustration. This key is detachable, so that it may be given the same finish as the socket or fixture. The standard metal key measures $\frac{3}{4}$ inch from the end to the shell. Longer keys will be furnished on special order.

Sockets with metal keys not longer than 1 inch, add to list price of Standard sockets 9 cents.

Sockets with metal keys longer than 1 inch, add to list price of Standard sockets 15 cents.

Standard package, 100 of one length.

† Sockets for Special Metal Keys

We are prepared to furnish sockets, as shown in the illustration, designed to receive a special key furnished by the fixture manufacturer, to match the fixture. The threaded metal part of the key mandrell is thoroughly insulated from the other parts of the socket. The screw is $\frac{1}{4}$ inch diameter, 26 threads.

Add to list price of Standard sockets, 9 cents. Standard package, 100.

† Pull Sockets with Extension Chain Guides

Pull sockets installed in husks or socket covers require extension chain guides to carry the chain free of cover and shade. The chain guide is not attached to the socket shell but to the socket mechanism. It is detachable and separable and can be removed for refinishing. By carrying a stock of various lengths of guides, it is possible to convert standard sockets into sockets with extension guides, making it unnecessary to carry a stock of completed sockets with various lengths of chain guides attached. The hole in the husk need not be more than $\frac{1}{8}$ inch. The portion of the extension chain guide which is attached to socket extends less than $\frac{1}{8}$ inch outside of socket shell, making it possible to insert the socket in any husk, no matter how closely it follows the outline of shell. Extension chain guides of following lengths furnished from stock: $\frac{3}{4}$, 1, $1\frac{1}{4}$ and $1\frac{1}{2}$ inches. Additional list price either assembled on sockets or loose, 15 cents. Standard package quantity, 50 of one length or 100 of assorted lengths. Sockets with extension chain guides may not be combined with sockets having regular chain guides to make up a standard package quantity.

Pull Sockets with Chains of Special Lengths

The standard length of chain on all pull sockets, except miniature and candelabra is 8 inches. Sockets with chains shorter than 8 inches will be billed at the same price as regular. For sockets with chains longer than 8 inches, add to list price per foot, 12 cents. For special finishes on chains longer than 8 inches, add to list price per foot 3 cents.

Pull Sockets with Silk Cord

Pull sockets can be furnished with silk cord in any desired color instead of chain. For sockets with cords not longer than 8 inches, add to list price 6 cents.

For sockets with cords longer than 8 inches, add to list price per foot, 18 cents.

Pull Sockets with Linen Cord

Pull sockets can be furnished with a short chain and 3 feet of linen cord, complete with ball, similar to that regularly furnished with pull switch rosettes without extra charge. For cords longer than 3 feet, add to list price per foot, 2 cents.

† Pull Sockets with Insulated Chain

Pull sockets can be furnished with insulated chain accomplished by inserting a piece of fiber rod in the chain about 2 inches below the chain guide. For sockets so equipped add to the list price, 18 cents.

The standard package quantity will be the same as for the Standard socket in connection with which the insulated chain is ordered.

† National Electrical Code Standard.

Pull Socket Chain and Parts

Schedule "H"

List No.	Description	Carton Quantity	Std. Pkg.	Pkg. Wt. Ozs.	List Price
...	†Bead chain (per foot)	164 ft.	..	\$0.144
510	†Splicing link	200	200 ft.	4	.036
512	†Snap-lock ball	250	250 ft.	12	.067
513	†Insulating link	100	100 ft.	6	.116

No. 510

No. 512

No. 513

Standard finish on the above is brush or old brass, which will be supplied when no other finish is specified. All other finishes will be special and will be charged extra as follows: Chain, .028 cents list per foot; balls and links, .028 cents each list.

All New Wrinkle and Wrinklet Pull Sockets are supplied with the No. 512 Ball listed above. It may be detached and attached with the utmost ease, when necessary, but cannot be detached by any strain to which it will be subjected in service, no matter how severe.

Chain Guides

Schedule "H"

The Standard chain guide, when sold separately from the socket, will list at \$0.072. Standard package, 250. Extension chain guides described on the opposite page, when sold separately, will list at \$0.173. Standard package, 50 of one length or 100 of assorted lengths. For special finishes on chain guides, add to list price \$0.028.

†Sockets for Gas Filled Lamps

Schedule "B"

Sockets for gas filled lamps must be waxed with a compound which will not soften under heat. The Mogul base sockets listed are regularly so made. For medium base sockets to be used with gas filled lamps, add to list price \$0.036.

†Sockets with Lamp Grips

Schedule "B"

All Mogul base sockets and most medium base sockets listed in this Bulletin can be equipped with a lamp grip, which effectually prevents the lamp from accidentally unscrewing. For sockets so equipped, add to list price 6 cents.

Socket Caps with Special Bushings

Schedule "B"

Most caps of brass shell sockets can be furnished with insulated bushing, as illustrated. The purpose of this construction is to provide a passage for the conductors when the support for the socket is a rod instead of a pipe or tube. For sockets so equipped, add to list price \$0.024.

Sockets and Receptacles in Special Finishes

Socket Cap with Special Bushing

It is of great advantage to the electrical trade to be able to obtain on short notice sockets in various special finishes. It is also economical, as the refinishing of a socket after it once has been assembled is decidedly expensive.

To meet the demand for this class of goods we are now carrying in stock sockets in special finishes for which there is a large demand, such as polished brass, oxidized copper, polished nickel, etc.

Special finishes, occasionally used, we do not carry regularly, but are prepared to furnish on short notice to order. In placing orders for special finishes which are not standardized, we suggest the submitting, at the same time, of a sample for our information.

LIST OF SPECIAL FINISHES

Schedule "B"

The standard finish of all brass shell sockets is brush brass, which will be supplied where no finish is specified. Regular and special finishes of one List No. may be assorted to make up standard package quantity which will be the same as though all were regular finish.

Standard finish is brush or old brass, which will be shipped when no finish is specified. Polished brass when specified will be furnished without extra charge. For special finishes, see listing elsewhere.

**For long keys, metal keys, switches with threaded stems, and other special sockets, see listing elsewhere.

††Bodies are regularly furnished with 8 inches of chain. For extra chain, cord, instead of chain, extension chain guides, etc., see listing elsewhere.

*Approved rating 2 amperes, 125 volts.

†This base is suitable for attachment to No. 500 Adaptboxes.

‡National Electrical Code Standard.

BRYANT RECEPTACLES FOR DECORATIVE LIGHTING

660 WATTS, 250 VOLTS

Porcelain Decorative Receptacle

Mica Decorative Receptacle

Decorative Cleat Receptacle

Ready-wired Receptacles

These receptacles will be furnished "ready-wired," that is, supplied with approved stranded single braid rubber covered wire, connections soldered, and then filled with insulating compound, making the receptacles absolutely weatherproof.

We carry at all times a large stock of parts and can usually ship orders of reasonable size the same day that they are received at the factory.

These receptacles are put up in lengths of about 500 feet and will be so shipped, unless otherwise specified.

Additional lengths of wire can be supplied on either end of the streamers. Add 13 cents list per foot (7 cents each conductor) for No. 14 wire and 15 cents list per foot (8 cents each conductor) for No. 12 wire.

The list price of receptacles spaced more than 30 inches apart is obtained by adding \$1.05 per 100 receptacles per inch to the list of No. 4041Z and 4042Z for No. 14 wire and \$1.23 per 100 receptacles per inch to the list of No. 124034Z, 124041Z and 124042Z for No. 12 wire.

**"SPARTAN" INTERCHANGEABLE PLUGS AND RECEPTACLES
"SPARTAN" PLUG CAPS—10 AMPERES, 250 VOLTS**

Schedule "H"
Any of these caps can be furnished "polarity" (non-reversible) without extra charge. To specify polarity caps, change the first letter to M, as: MA, MB, MC, etc. Any of these caps can be furnished with the blades set tandem (— —) instead of parallel (||) without extra charge. To specify caps with tandem blades, change the first letter to L, as LA, LB, LC, etc.

List No.	Description	Carton Qty.	Std. Pkg.	Pkg. Wt.	List Price Complete
KA†	Standard plug cap	10	50	8	\$0.22
KB†	Brass covered cap	10	50	8	\$0.36

The standard finish on the cap is brush brass or old brass, which will be shipped when no finish is specified. Polished brass, when specified, will be shipped without extra charge. For other finishes add to list 5 cents.

KC†	Brass covered cap with finger grip	10	50	10	\$0.51
-----	--	----	----	----	--------

This cap is offered in response to the demand from certain engineers and others for a cap that provides some means of detaching the cap from its base other than pulling on the conducting cord. Finishes are the same as for KB cap listed above.

KD†	Elongated cap	10	50	9	\$0.36
-----	---------------------	----	----	---	--------

This cap is particularly for use in connection with No. 48 Conduit Box Receptacle when the two are installed in a watertight floor box.

KE†	Pilot cap (125 volts)	10	30	12	\$1.37
-----	-----------------------------	----	----	----	--------

The 2 C.P. 125 volt candelabra base lamp, which forms a part of this device, is connected in multiple with the current consuming device which is connected to the cap.

KF†	Edison adapter cap (660 watts)	10	30	6	\$0.44
-----	--------------------------------------	----	----	---	--------

This device permits the insertion of a medium base lamp in any "Spartan" base, or it may be used as an adapter to connect other makes of Edison attachment plugs into "Spartan" bases.

"SPARTAN" ATTACHMENT PLUGS—660 WATTS, 250 VOLTS

"SPARTAN" MOTOR ATTACHMENT PLUG—10 AMPERES, 250 VOLTS

Schedule "H"

This device is designed for supplying current to portable current consuming devices such as heaters and vacuum cleaners. The part with the knife blade contacts (measuring 1½ inches in diameter and having holes for supporting screws spaced 1 inch on centers) is permanently attached to the apparatus to which current is to be fed. It is well to so house this part as to protect the contacts from mechanical injury. The body piece is attached to the conductors which supply the current and, as all live parts are completely enclosed, it is impossible for a short circuit or ground to occur should this part, when disconnected from the apparatus, come in contact with some conducting material.

**"SPARTAN" RECEPTACLES WITH BASE FOR CONDUIT BOXES
10 AMPERES, 250 VOLTS**

This receptacle is specially designed to be installed in a 4 inch octagon box of the standard type. The neck of the receptacle is threaded the same as 1/2 inch conduit and can, therefore, be inserted in any 1/2 inch knockout and secured by a 1/2 inch lock nut. When octagon boxes are used for surface work, this receptacle is extremely useful as the binding posts are so arranged as to be easily accessible after the box has been installed, so that additional taps for drop cords or the like can be taken off at any time with a very slight expenditure of labor.

**"SPARTAN" RECEPTACLES FOR CONDUIT BOX COVERS
10 AMPERES, 250 VOLTS**

This receptacle is similar in construction to No. 4072 Sign Receptacle listed elsewhere. It may be attached to any outlet box cover having a hole 1 1/4 inches in diameter. No notch or lug is necessary, as the receptacle is prevented from turning by three fins in the inner porcelain which bite into the metal of the cover. The outside diameter of the body of the receptacle is 1 3/4 inches.

"SPARTAN" RECEPTACLE AND TYPE "O" SWITCH COMBINATION 10 AMPERES, 250 VOLTS

This device is a combination of a "Spartan" Flush Receptacle and a Type "O" double pole, indicating flush switch, ready wired, and designed to be installed in a standard single switch box. The line wires may be attached to either end of the device. If attached to the switch end, the switch controls the receptacle as well as the outgoing circuit; but if attached to the receptacle end, current may be taken off through the receptacle irrespective of the position of the switch, which will control only the other outgoing circuit.

For "combination plates" (defined elsewhere) specify "W" sections for this device.

The Won-Dor Flush Receptacle

660 WATTS, 250 VOLTS

Schedule "H"

The Won-Dor Receptacle fulfills every requirement for the perfect flush receptacle. It is indeed a wonder. Its one door automatically recedes upon the introduction of the plug and automatically returns when the plug is withdrawn, so that no live parts are ever accessible and dust and dirt are effectually excluded.

The Won-Dor Receptacle takes any Edison attachment Plug. The plug is inserted by pushing it straight in. The plug is removed by pulling it straight out.

The plug cannot be left part way in or out. If the plug is not in perfect contact it is ejected by the spring of the door.

Even old style attachment plugs, which are neither swivelling nor separable, can be inserted in the Won-Dor Receptacle without twisting the cord.

When ordering "combination plates" (as described elsewhere), specify "F" sections for Won-Dor Receptacles.

List No.	Description	Outside Screw Spaced Inches	Inside Screw Spaced Inches	Carton Qty.	Std. Pkg.	Pkg. Wt. Lbs.	List Price Complete

BRYANT FLUSH RECEPTACLES AND SWITCHES

Nos. 430, 431 and 432

No. 497

No. 489

Disappearing Door Flush Receptacle

10 Amperes, 250 Volts

Schedule "H"

This is the latest Bryant Flush Receptacle and it has some advantages over the others which we have formerly listed. The doors open and close automatically with the insertion and withdrawal of the plug. This makes the Receptacle suitable for floor as well as baseboard use, as dirt and dust cannot enter. It is also a very safe Receptacle as, when the plug is withdrawn, the doors are held shut by stiff springs so that it is almost impossible to gain access to the live parts except by means of the plug.

The following is from recent ruling of the Underwriters' Laboratories:

"Provided these receptacles will not be liable to mechanical injury, and the presence of moisture is not probable, it will be permissible to install the flush receptacles with disappearing doors, in wooden floors."

List No.	Description	Screw Holes on Centers		Carton Quantity	Std. Pkg.	Pkg. Wt. Lbs.	List Price Each
		Outside	Inside				
430*	"D. D." Gang Receptacle	3 $\frac{1}{2}$ ins.	2 $\frac{1}{8}$ ins.	10	25	15	\$0.72

Schedule "H"

489	Special D. D. Plate for bracket use	1	10	..	\$1.59
490	Combination D. D. Plug and Wall Bracket	1	10	..	5.04

The standard D. D. Receptacle No. 430 is used with the above plate and bracket.

High Capacity "D D" Receptacle 25 Amperes, 250 Volts

Schedule "H"

It should be particularly noted that this Receptacle occupies the space of two standard flush receptacles. No. 2568 high capacity flush switch listed below may be used for controlling the current to this receptacle and these two devices may be mounted together on a single flush plate, in which case a four-gang switch box would be required.

446*	High Capacity Gang Receptacle	1	10	..	\$2.16
447*	Single Plate, 4 $\frac{1}{2}$ x 4 $\frac{1}{4}$ inches	1	10	..	2.88
448*	High Capacity Indestructible Plug	1	10	..	2.16

This device requires a two-gang box. There are holes for four supporting screws spaced 3 $\frac{1}{2}$ inches on centers vertically and 1 $\frac{1}{8}$ inches on centers horizontally.

Plates for mounting these Receptacles in gangs will be furnished only on special order. When so mounted, the Receptacles will be spaced 1 $\frac{1}{8}$ inches on centers.

No. 514

Bull's Eye Receptacles

For Candelabra Base Lamp

Schedule "H"

The outfit consists of a flush plate of standard dimensions, in the center of which is a ruby glass bull's eye. The lighted lamp beneath serves as an effective cautionary or danger signal. The lamp-holding receptacle may be installed individually or may be mounted up in gangs with switches and receptacles and the entire combination covered by a single plate. The many combinations possible are indicated on page to follow.

List No.	Description	Carton Quantity	Std. Pkg.	Pkg. Wt. Lbs.	List Price Each
427 ^A	Receptacle with 2 C.P., 125 Volt Candelabra base Lamp Single	10	25	15	\$1.44
428 ^A	plate, $4\frac{1}{2}$ x $2\frac{3}{4}$ inches	5	25	1.80

Outside supporting screw holes, $3\frac{1}{4}$ inches on centers.

Inside supporting screw holes, $2\frac{1}{4}$ inches on centers.

Plates for mounting these receptacles in gangs will be furnished only on special order. When so mounted the receptacle will be spaced $1\frac{1}{4}$ inches on centers.

The above receptacle is designed to receive a Form H (General Electric designation) lamp.

For 250 Volt Circuits

When Bull's Eye outfits are wanted for circuits of 200 to 250 volts it is necessary to connect two No. 427 receptacles in series and cover them with a No. 436 plate illustrated above.

436 ^A	Single plate $4\frac{1}{2}$ x $4\frac{3}{4}$ inches	1	10	\$2.31
------------------	---	---	----	-------	--------

This device requires a two-gang box. There are holes for four supporting screws spaced $3\frac{1}{4}$ inches on centers vertically and $1\frac{1}{4}$ inches on centers horizontally.

Ready Wired Bull's Eye Combinations

469	Same combination as 465 with Rotary Lock Flush Switch.....	1	10	5.76
495	Combination similar to No. 465 but with 3-point Type O Flush Switch instead of double pole switch.....	1	10	5.04

No. 465 combination consists of a No. 2494 Type "O" double pole indicating switch mounted in a special porcelain that also provides a receptacle for a candelabra base lamp which is covered by a perforated brass cage so that the lamp cannot be removed without removing the plate. The lamp is in circuit whenever the switch is closed. This outfit may be installed in any standard single switchbox.

Outside supporting screw holes, $3\frac{1}{2}$ inches on centers.

Inside supporting screw holes, $2\frac{1}{4}$ inches on centers.

Plates for mounting these receptacles in gangs will be furnished only on special order. When so mounted, the receptacles will be spaced $1\frac{1}{2}$ inches on centers.

The above combinations are designed to be installed in a three gang box. There are holes for supporting screws spaced $3\frac{3}{8}$ inches on centers vertically and $3\frac{5}{8}$ inches on centers horizontally.

PERKINS SPECIAL PLATES

SPECIAL FINISHES ON FLUSH PLATES

The standard finish on all Flush Plates, unless otherwise noted, is brushed brass, which will be supplied on all orders where no other finish is specified. For all other special finishes, except those requiring gold and silver, add 18 cents per switch or receptacle to the price of the plate in standard finish. Prices on plates in gold and silver finishes will be quoted on application.

PLATES WITH ROUND CORNERS AND ROUND EDGES

Plates with round corners and round edges, other than those listed will be furnished at 27 cents list extra for single plates and 9 cents list extra for each additional switch or receptacle in gang plates.

PLATES WITH ROUND CORNERS AND BEVELED EDGES

Plates with round corners and beveled edges will be furnished at 27 cents list extra per plate.

SPECIAL SIZE PLATES

Special size plates for standard devices will be sold at a list price of 11 cents per square inch in lots of less than 100, and 8 cents per square inch in lots of 100 or more plates (not gangs) of one size and type. When plates are other than rectangular in shape, the area by which the list is determined will be the size of the smallest rectangular piece from which the specified plate can be cut.

Orders for special size plates should always be accompanied by a plainly-marked sketch, giving all dimensions.

SPECIAL PLATES

The factory has exceptional facilities for producing promptly anything which may be required in the way of special flush plates. Realizing that special plates are usually more urgently needed than stock material, particular attention is given to all orders covering them and are usually able to make shipment promptly.

Plates which are special in ways not covered above will be quoted upon application.

Nothing in the prices listed above shall be understood to mean that special plates of any description will be furnished at a less price than the corresponding standard plate.

FACE PLATE SCREWS

Face plate screws when bought separately will list at \$1.35 per 100; standard package 100 in Schedule "H."

ENGRAVING

Flush plates will be engraved with words or numbers to indicate the circuits controlled at a list price of 11 cents per letter or numeral.

ADJUSTING FRAMES FOR FLUSH SWITCHES

Perkins Adjusting Frames make it a simple matter to line up Flush Switches so that the plate will fit. These frames are made for both Push Button and Rotary Switches, and are supplied gratis to users of Perkins Switches.

Multiple Heater Switches

SINGLE POLE—MICA INSULATED

Operating Low, Medium, High, Off—15 Amperes, 250 Volts

Schedule "H"

These switches are used in connection with a heater having two coils, one of which generates more heat than the other. The switch connects these coils as follows: first position, small coil; second position, large coil; third position, both coils in parallel; fourth position, both coils off.

List No	Description	Diameter Base Inches	Screws Spaced On Center Inches	Carton Quantity	Std. Pkg.	Pkg. Weight Lbs.	List Price

No. 2635

No. 2681

Indicating Handle Heater Switches

MICA INSULATED

Schedule "H"

In these switches the indication is obtained by means of a pointed handle which points to markings on the switch cover. Inasmuch as the pointed end of the handle can be distinguished at a greater distance than ordinary indications can be read and the distance which the handle moves with each change in the position of the switch is 90 degrees, the operator very promptly is able to know the position of the switch at a glance.

HUBBELL STANDARD AND SPECIAL FINISHES

Sockets will be furnished in the different finishes listed below. Standard finishes are brush brass, old brass and polished brass. No extra charge is made for sockets with these finishes. Unfinished sockets will be furnished at the same list price as polished brass. Sockets may also be ordered unassembled, the interiors, linings, etc., being packed separately. Sockets furnished in this manner carry the same list as assembled sockets.

No. of Finish	Description	No. of Finish	Description	No. of Finish	Description
1	Polished brass	13	Antique copper or Japanese bronze	23	Lemon brass
2	Old brass or brush brass			24	Ormolu or French gilt
3	Old English bronze	14	Polished or hardware bronze	25	Burnished gilt
4	Antique or Flemish brass			26	Polished silver
5	Oxidized brass	15	Polished copper	27	Pompeian bronze
6	Gilt	16	Polished steel	28	Roman or dull gold
7	English bronze	17	Nickel plate	29	Gun metal
8	Satin gold	18	Oxidized silver	30	Sand blast ant. brass
9	Etruscan gilt	19	Butler silver	31	Sand blast old brass
10	Gold bronze	20	Wrought iron	32	Verdi antique
11	Mottled copper	21	Bauer barff		
12	Oxidized copper	22	Acid or statuary bronze		

Special Finished Key and Keyless Sockets

The following special finishes on sockets, except sockets with shade holders attached and pull sockets, carry an extra list price as follows:

Polished or rich gilt	\$.03	All other brass finishes except sand blast	\$.06
Wrought iron	.03	All other copper finishes except sand blast	.06
Bauer barff	.03	All other finishes less than 500 of one finish	.06
Polished nickel	.06	500 or more of one finish	.06
Statuary bronze	.06		

Standard package same as regular finish, but regular and special finishes of one Mfr. number may be assorted to make up quantity.

Receptacles furnished with special finish take the same advance as sockets with corresponding special finishes.

Sockets with shade holders attached, in special finishes, .03 cents list more than standard sockets with the same finish.

Sockets and receptacles now made with a brass shell can be furnished with solid copper shell at .06 cents list extra over the regular price for brass.

Special Finished Pull Sockets, Candelabra Pull Sockets, Pull Switches, Socket Chain and Acorns

Sockets in polished or rich gilt, wrought iron, bauer barff, add to list price	\$.04
Sockets in oxidized copper, and polished nickel, add to list price	.06
Sockets in old English bronze, oxidized brass, Etruscan gilt, mottled copper, polished bronze, polished steel, lemon brass, burnished gilt, antique brass, English bronze, gold bronze, antique copper, polished copper, acid bronze, ormolu gilt, add to list price	.12
Sockets in oxidized silver, butler silver, Verdi antique, Pompeian bronze, polished silver, satin gold, Roman gold, gun metal, sand blast antique brass, sand blast old brass, add to list price	.18
Pull sockets with shade holders attached, add to list price of same finish on standard pull sockets	.03

Standard package of pull sockets in special finishes same as regular finish.

Regular and special finishes may be assorted to make up standard package quantity.

Special finishes on extra chain, also on chain not attached to socket, add to list price, per foot	.03
Special finishes on separate acorns, add to list	.03
For special finished chain guides, sold separate from sockets, add to list	.03

Addition for Special Finishes on Attachments for Oil Lamps

Mfr. No.	Description	List Price Each
5403-5529	Incandescent light attachment for oil lamps	\$.29

The above price covers the following finishes: Oxidized copper, wrought iron, English bronze, antique copper, bauer barff, rich gilt, nickel plate, old English bronze, mottled copper, polished copper acid bronze.

All other finishes on application.

Wiring Devices

HUBBELL SOCKET PARTS

Pull Sockets with Extension Eyelet Schedule "B"

The extension eyelet makes it possible to use the pull socket with husks or fixtures where limited space will not admit the use of regular eyelet.

Unless otherwise specified, sockets with 1 inch extension will be furnished.

Socket with Extension Eyelet

Socket with Extra Long Key

List No. for Elect. Soc.	List No. for Std. Socket	Description	Std. Pkg.	Pkg. Wgt. Ounces	Addition to List Price of Socket
3393	3329	1/2 inch extension eyelet Bulk	50	8	\$0.15
3292	3322	3/8 inch extension eyelet "	50	8	.15
3294	3323	1/4 inch extension eyelet "	50	10	.15

3298	3327	1 3/4 inch extension eyelet "	50	18	.15
3299	3328	2 inch extension eyelet "	50	20	.15

Sockets With Extra Long Key Schedule "B"

The key sockets listed are equipped with 1 inch keys, but can be fitted with longer keys on special order, which must specify distance desired between outside of shell and end of handle.

The following can be furnished on special order: Length: 3/4 inch, same price and standard package as 1 inch. Length: 1 1/4 inches, 1 1/2 inches, 2 inches, 2 1/2 inches, add to list price of standard sockets, 9 cents. Standard package, 100 of one length. On orders for sockets with extra long keys, where the length is not given, 1 1/2 inches will be furnished.

Pull Sockets with Insulated Chain Schedule "B"

Hubbell pull sockets can be furnished with insulated chain, made so by a piece of fibre rod inserted in the chain. For sockets so equipped add 18 cents to the list price.

Standard package quantity is the same as for the standard socket with which the insulated chain is ordered. Furnished on any style of pull socket.

Separate Standard and Insulated Chains Schedule "B"

List No.	Description	Std. Pkg.	Pkg. Wgt. Lbs.	List Price
3320	8 in. chain, standard, complete with acorn (not insulated).....	250	1 1/4	\$0.16
3321	8 in. chain, complete with insulation and acorn.....	250	1 1/2	.34

Extra length chains figured at 12 cents per foot list. All chains are cut 1 1/2 inches longer than specified to allow for operating mechanism.

Standard finishes are polished brass, old brass and brush brass. Special finishes on chain, 3 cents per foot extra. Special finish acorn, 3 cents extra.

Socket Chain and Acorns Schedule "F"

All of the above switches are equipped with 10 feet of extra quality linen cord and No. 5919 adjustable acorn. Additional cord, extra 2 cents. Special acorn, 9 cents each list. Standard finishes, polished brass, old brass and brush brass. Brush brass furnished where no finish is specified. Switches in special finish subject to same corresponding addition to list price as standard pull sockets and 7 cents additional for switches with "Economy" extender attached. The "Economy" extender takes the place of the regular chain eyelet, being attached direct to eyelet bracket. Switches with K.-W. bases not rated over 2 amperes, 125 volts.

HUBBELL PULL ATTACHMENTS

No. 5828

Illustrating Use

Attachment for Pull Sockets

This attachment is made of sheet brass of ample stiffness to resist strain of continuous use. Attaches direct to the socket, not to the shade holder. The spring band at the end of the horizontal arm snaps around the socket. A slot hooks over a screw by which the band is secured.

Schedule "F"

List No.	Description	Carton Quantity	Std. Pkg.	Pkg. Lbs.	List Price Each

Male
Bushing
Candelabra Receptacles

Female
Bushing
Candelabra Receptacles

The above receptacles are known as standard round candelabra receptacles and will take candelabra base lamps. They are constructed of porcelain and especially designed for use with fixtures equipped with glass candles. The receptacle screws into a central supporting tube, and the candle, when in place, completely covers both the supporting tube and receptacle. They are fitted with both male and female thread.

No. 5812 receptacle is provided with porcelain skirt $\frac{1}{8}$ inch longer than standard. Is otherwise identical in construction to No. 5686.

Candelabra Extension

Schedule "M"

5481 ^A	Extension, Candelabra.	50	50	1	\$0.49
5879	Extension, Miniature.	50	50	1	.49
5482 ^A	Collar.	50	50	1	.07
5483 ^A	Candle.	25	50	2	.21
6145	Extension, Standard.	50	.	.70

Extensions over $4\frac{1}{4}$ inches in length, add to list 14 cents per inch or fraction thereof. Candles over 4 inches in length, special prices on application.

The extension is designed to take a 4 inch candle, and is sold complete with socket, or separately, as listed.

Candelabra sockets with shade holder bead preventing collar from seating on shoulder of shell requires an extension $4\frac{1}{4}$ inches in length when used with 4 inch candle.

For special finish collar, add to list 3 cents.

35031	Pull, 3 wire molding base, 18 inch chain.....	10	20	20	1.32

Supporting screw holes spaced 1½ inches on centers.

DEEP BASE CEILING SOCKETS

Schedule "B"

35032 ^A	Pull, metal covered base.....	10	50	40	\$1.20
35034 ^A	Pull, insulated metal covered base.....	10	50	40	1.20

Supporting screw holes spaced 2½ inches on centers. Deep base ceiling sockets may be used with 3½ inch and 4 inch conduit box adapters illustrated elsewhere.

Ceiling sockets are equipped with 18 inch chains. When furnished longer add to list, per foot, 12 cents.

For separate chains not attached to sockets see listing elsewhere.

Standard finishes are brush brass, old brass and polished brass.

Incandescent Light Attachment

250 Watts—250 Volts—Lock Shell Fastening

Schedule "F"

This is a handsome and inexpensive device for attaching to an oil lamp, to give it the practical advantage of an electric lamp.

The base of the socket is easily and quickly fitted to any lamp with a common burner, either flat wick or central draft.

It does not injure the lamp in any way, and requires no tools to attach.

When sold complete it is fitted with 7 feet of silk parallel lamp cord and Hubbell plug No. 5406.

With Swivel Strain Relief Bushing—10 Amperes, 250 Volts

Schedule "H-2"

HH-6254	Composition cap, standard contacts.	10	50	12	\$0.45
HH-6255	Composition cap, small contacts.	10	50	12	.45
HH-6328	Composition cap, standard contacts, with bushing designed for armored cord.	10	50	12	.45
HH-6329	Composition cap, small contacts, with bushing designed for armored cord.	10	50	12	.45

A threaded brass ring swivels around the hard rubber split bushing, threading into the top of the cap. This operation securely clamps the cord to the bushing without twisting it and eliminates the necessity of knotting.

Caps Nos. HH-6328 and HH-6329 are especially fitted for use with steel armored flexible cord; the hard rubber bushing being shaped to the metal covering of the cord.

5665 ^A	Polarity, 20 ampere brass covered porcelain cap, for No. 10 jumper cable, with split bushing strain relief.	10	25	12	1.26

Nos. 5700 and 5657 plug caps are interchangeable with the entire line of regular 10 ampere or 660 watt Hubbell plugs and receptacles having straight contacts.

Caps Nos. 5553 and 5665 are interchangeable only with 20 ampere Hubbell polarized flush and wall receptacles. Standard finish for 5657, 5665, 5700, 5657, 5553, 5526 and 5527 polished and brush brass.

All other finishes, add to list 7 cents when furnished separately. When furnished as part of complete flush receptacle, no extra charge is made for corresponding standard finish of plates.

Nos. 5526 and 5527 caps are a trifle deeper than the regular Hubbell caps. They are made in the fusible type and designed to convert Hubbell fuseless plugs into fusible. When furnished with flush receptacles, no extra charge is made for corresponding standard finish of plates. All plugs fitted with fusible cap, add to list 7 cents.

Wiring Devices

HUBBELL RECEPTACLES

"Duplex" Receptacle

Recessed Receptacle

Hubbell "Duplex" Flush Receptacles

The "Duplex" Flush Receptacle will take any one of an assortment of seventeen different styles of Hubbell Plug Caps, fitted with either large (see Fig. 1) or small (see Fig. 2) knife blade contacts.

For the reason of there being such a variety of caps adaptable to the "Duplex" receptacle, we do not list them as part of the complete device. It will therefore be necessary for the purchaser to specify separately the caps desired, under their respective catalog Nos.

The principal advantage of the "Duplex" receptacle is in the convenience of the additional outlet without the usual expense of the two-gang receptacle.

One set of binding screws does for both outlets.

The "T" slots double the utility of the plug.

"Duplex" receptacles may be obtained in gangs.

Porcelain base made extra heavy.

Lugs supporting the receptacle to outlet box are of extra heavy brass.

The "Duplex" receptacle makes an ideal outfit and is recommended for all installations where a flush receptacle is practicable.

6 AMPERES—250 VOLTS (PER OUTLET)

Schedule "H-3"

List No.	Description	Carton Quantity	Std. Pkg.	Pkg. Wt. Lbs.	List Price
6257	Porcelain "Duplex" Receptacle only.....	10	50	40	\$1.24
6258	Single-gang plate, $4\frac{1}{2} \times 2\frac{3}{4}$ ins.....	10	50	15	.82
6259	Two-gang plate, $4\frac{1}{2} \times 4\frac{3}{4}$ ins.....	10	25	..	1.89
6260	Three-gang plate, $4\frac{1}{2} \times 6\frac{3}{4}$ ins.....	10	15	..	5.55
6261	Four-gang plate, $4\frac{1}{2} \times 8\frac{3}{4}$ ins.....	10	10	..	8.19

Polished brass, brush brass, old brass, polished nickel, statuary bronze, polished bronze, oxidized copper, wrought iron and bauer barff are standard finishes for brass flush plates. All other finishes, excepting gold, silver and sand blast, add to list, per unit, 13 cents.

Black is the standard finish for porcelain centers, and will be so furnished on all orders unless otherwise specified. White faced porcelain receptacles are carried in stock and can be supplied for use in bathrooms, hospitals, etc.

Supporting screw holes, $3\frac{3}{8}$ inches on centers.

Porcelain receptacle No. 6257 measures $2\frac{3}{4}$ inches in length or $\frac{1}{8}$ inch longer than the standard Hubbell Flush Receptacle, but will fit most single-gang switch boxes.

Flush Receptacle WITH RECESSED PLATE

Schedule "H-3"

List No.	Description	Carton Quantity	Std. Pkg.	List Price
6285	Porcelain receptacle only.....	10	50	\$0.76
6286	Recessed plate only for No. 6282 receptacle.....	10	50	.95

This device is equipped with the new Hubbell "T" slot contacts, making it interchangeable with seven-teen different types of caps.

Its construction permits the cap to be inserted in such a manner that the top of the cap is flush with the plate.

NOTE: On the above, polished brass, old brass, polished nickel, polished bronze, oxidized copper and imitation bauer barff are standard finishes for flush plates. All other finishes, excepting gold and silver, add to list, per unit, 13 cents.

Outside supporting screws, $3\frac{1}{2}$ inches on centers.

Inside supporting screws, $2\frac{1}{2}$ inches on centers.

*Packed as three separate units, receptacle, plate and cap.

Special Plates

Plates with round edges, 19 cents list extra for single plates. 7 cents list extra for each additional gang. The price of a combination plate is the aggregate price of the units composing the gang.

Special size plates in standard finishes will be sold at a list price of 8 cents per square inch in lots less than 100, and 5 cents per square inch in lots of 100 or more plates of one size and type.

Plates which are special in ways not covered will be quoted upon application.

Orders for special size plates should always be accompanied by a plainly marked sketch giving the dimensions.

Orders for specially finished plates should be accompanied by a sample of desired finish.

FOR ATTACHMENT PLUGS

Schedule "H-2"

This casing is designed to protect the porcelain cap of No. 5406 separable attachment plug. It is made of soft rubber, and is easily and quickly sprung in place.

The top of the casing grips the cord very tightly, and by adjusting No. 5589 rubber ring as illustrated, an absolutely weatherproof plug is the result.

P & S Socket Wrench

Socket with 2 1/4 inch Shade Holder

P & S Brass Keys

P & S TOOLS AND SOCKET PARTS

P & S Fluto Tool

The P & S Socket Wrench illustrated is provided as a convenience to fixture manufacturers or other users of *Fluto* type shell. In husk work it reduces the labor of putting the cap on the fixture, in close fitting husks. Furnished free of charge to users of P & S Sockets.

*Sockets with 2 1/4 Inch Shade Holder

Rigidly Attached to Shell

Any *Fluto* or *Passmour* sockets or receptacles illustrated in this bulletin may be supplied with 2 1/4 inch shade holder rigidly attached as illustrated. When so supplied the list price will be advanced eight (8) cents each. The standard package quantity will be the same as for sockets without the shade holder attached. All sockets with shade holders attached are packed ten (10) in a carton.

*Sockets or Receptacles with Brass Keys

Any key socket or receptacle shown of the *Fluto*, *Passmour* or *Bayonet* type may be supplied with a brass key. In many fixtures and portables it is desirable to finish the key to match the fixture. With the ordinary composition key the finish may be made uniform. The brass key is threaded and detachable, so it may be used on very tight husk work.

*Socket with Brass Keys Attached

Add to List

	Carton	Std. Pkg.	Add to List
Socket with 3/4 and 1 inch brass key	25	100	\$0.09
Socket with 1 1/4 inch brass key	25	100	.15
Socket with 1 1/2, 2 and 2 1/2 inch brass key	10	100	.15

*Extra Brass Keys

Add to List

	100	100	\$0.06
3/4 and 1 inch brass key	100	100	.12
1 1/4, 1 1/2, 2 and 2 1/2 inch brass key	100	100	

Brush brass is regular finish, but polished brass will be supplied without additional charge.

For all other finishes, add one-half the advance for standard sockets 91.

*Swan Strain Relief

Schedule "B"

Any of the key, keyless or pull sockets, *Fluto* or *Passmour* type will be supplied with the Swan Strain Relief at an advance of 3 cents list. When sockets are so supplied the standard package quantity remains unchanged.

*Sockets with Male Thread

Half-inch unlined conduit is exactly the right inside diameter to be threaded with 3/8 inch iron pipe tap. It will be found very convenient at times to use sockets with male thread, screwing them into the conduit, instead of using a reducing coupling, a nipple and socket with female thread.

*Sockets with Pendent Cap

The pendent cap is provided with double bushing, the inner one having a 9-32 inch hole. This inner bushing may be removed when larger cord is to be used, leaving another bushing with 13-32 inch hole.

*Pull Sockets with Insulated Chain

Pull Chain with Insulation

Schedule "B"

We can furnish pull sockets with insulated chain, accomplished by inserting a piece of fiber rod in the chain about two inches below the chain guide. For sockets so equipped, add 18 cents to the list price. The standard package quantity will be the same as for the standard socket in connection with which the insulated chain is ordered. This may be furnished on any style of pull sockets or receptacles.

Standard lengths of pull chain, with insulation, sold separately from socket at 12 cents per foot for the chain and 18 cents for the insulation.

	Std. Pkg.	List Price Each
8 inch chain complete, with insulation and ball	100	\$0.34
18 inch chain complete, with insulation and ball	50	.44

The above price is on either polished or brush brass. For all other finishes, add to list 3 cents.

*National Electrical Code Standard. Illustrations are 3/4 of full size.

Wiring Devices

P & S SOCKET PARTS

Socket with Extension Key

Socket with Extra Long Key

P & S Chain Guide

P & S Extension Chain Guide

Sockets with Extension Key

Schedule "B"

These sockets are designed to receive a special key furnished by the fixture manufacturer to match the general design of the fixture.

The threaded part of the extension key is thoroughly insulated from the current carrying parts of the socket. The thread is standard 6-32 thread.

Any socket can be supplied, at an advance of 9 cents list over the price of the regular socket. When so supplied, 100 is a standard package, 25 a carton.

Sockets with Extra Long Key

Schedule "B"

The key sockets listed have keys $\frac{3}{4}$ inch and 1 inch long. Extra long keys will be supplied to order at an additional price of 6 cents list.

When ordering sockets with extra long keys, please specify the distance desired between the outside of the shell and the end of the key. On orders for sockets with extra long keys, where the length is not specified, we will ship $1\frac{1}{2}$ inches. A standard package is 100, a carton 10.

We can furnish four extra long lengths, viz: $1\frac{1}{4}$, $1\frac{1}{2}$, 2 and $2\frac{1}{4}$ inches.

For any of the above long length keys, an additional charge of 6 cents list is made.

The Ball on P & S Pull Sockets

Schedule "B"

P & S pull sockets have been supplied with a ball, instead of the old style acorn. The old style acorn was made in two pieces with an edge that presented a place to catch the dirt. The ball used on P & S sockets presents a smooth surface, is substantial, and will not become unsightly after use.

This ball is so arranged that it may be removed from the chain when necessary to attach to a longer chain, or the last link on the chain may be cut off and allowed to drop into the ball. The ball is large enough to contain the link so dropped into it, and still contain the last link on the new chain when forced into position. In addition to this convenience, it is superior in general finish and appearance.

Price of balls sold separately from sockets. List Each \$0.08
Standard package and carton. 250

The foregoing price is for polished or brush brass

For all other finishes, add to list 3 cents.

Chain Guide

Schedule "B"

The trumpet or chain guide on P & S pull sockets is easily detachable without the necessity of loosening any screws. This makes it convenient to refinish in special finishes.

Chain guides sold separately from sockets. List Each \$0.06
Standard package and carton. 250

The foregoing price applies to polished or brush brass:

For all other finishes, add to list 3 cents.

*Pull Sockets with Extension Chain Guide

Schedule "B"

Pull sockets installed in husks or socket covers require extension chain guides (necessitating only a small hole in cover) to carry the chain free of cover and shade. The chain guide is not attached to the socket shell but to the socket mechanism. It is detachable and separable and can be removed for refinishing. By carrying a stock of various lengths of guides it is possible to convert the standard sockets into sockets with extension guides, making it unnecessary to carry a stock of completed sockets with various lengths of chain guides attached. The portion of the extension chain guide, which is attached to socket, extends less than $\frac{1}{2}$ inch outside of socket shell, making it possible to insert the socket in any husk, no matter how closely it follows the outline of the shell.

	List Price
$\frac{1}{4}$ inch extension chain guide.	\$0.15
$\frac{1}{2}$ inch extension chain guide.15
1 inch extension chain guide.15
$1\frac{1}{4}$ inch extension chain guide.15
$1\frac{1}{2}$ inch extension chain guide.15
2 inch extension chain guide.15
2 inch extension chain guide.15

Standard package quantity, 50 of one length, or 100 of assorted lengths.

Brush brass is regular finish, but polished brass will be supplied without additional charge.

For special finish chain guides sold separately from sockets, add to list 3 cents each.

*National Electrical Code Standard. Illustrations are $\frac{3}{8}$ of full size.

P & S SOCKET PARTS

Pull Socket

A view looking into P & S
61988, showing reinforcement
of contact shell

Key Socket

Construction

All P & S sockets and receptacles have the contact shell reinforced with a large brass washer under the head of each screw. It is impossible to pull this out no matter how hard the lamp is screwed in.

In all sockets and receptacles the contact binding screws are upset, thereby preventing them from falling out under any condition. The contact binding screws are unusually long.

Interchangeability

Throughout the entire line of *Passmour* and *Passmour* key, keyless, and pull sockets the interchangeable feature has been preserved in the mechanism.

Pull socket interiors will go into any of the shells used on *Passmour* or *Passmour* type key sockets.

Passmour or *Passmour* key socket interiors will go into the shells used on pull sockets.

The same interchangeable feature is carried out in the keyless interiors.

Pull Sockets

The P & S socket mechanism is double break. The current is broken on the contact shell so that regardless of the method of wiring, the contact shell is dead when the current is turned off.

The terminals of P & S pull sockets are marked "Positive" and "Negative."

As fast as possible, the Positive and Negative marks are being placed on all of the sockets and receptacles. It is quite a convenience, particularly on signs, where it is required to polarize the sign.

P & S *Shurlok* Locking Attachment

This is a device sold already attached to P & S sockets and receptacles, whereby the theft of the lamp is absolutely prevented.

The above illustration shows P & S 100421 with the *Shurlok* attachment, split so as to show the operation of the attachment.

⁴National Electrical Code Standard.
Wiring Devices

Standard Package Schedule "L"

The maximum standard package on Schedule "L" articles is 100 pieces of one Mfr. number with the *Shurlok* locking attachment.

If a device without the attachment is packed with a smaller quantity to a standard package, the addition of the *Shurlok* will not increase the quantity and the standard package will remain the same.

For illustration: P & S 100421 is packed 500 in a standard package, but when supplied with the locking attachment it takes Schedule "L" discounts, and 100 will be a standard package. P & S 216 is originally packed 50 in a standard package and when supplied with the locking attachment 50 will continue to be the standard package.

The Illustrations

The accompanying illustration shows how the theft of the lamp is prevented. A small set screw with a triangular head and pointed end is introduced into the base of the lamp by means of a special key. When this set screw is placed in position it is impossible to remove it without the use of this special key. The head of the set screw has a recess a considerable distance down into the fiber bushing, so it cannot be reached with tools.

The key required is of peculiar shape and keys of various descriptions already on the market will not fit it.

The Key Schedule "L"

The keys for the *Shurlok* locking attachment are not given away but are sold at .35 cents each net, regardless of quantity. They are sold only to those people properly entitled to have them.

Illustrations are $\frac{3}{4}$ of full size.

P & S SOCKET PARTS

Special Finishes

It should be an advantage to obtain on short notice sockets in special finishes. It is economical, as the refinishing of a socket after it has been assembled is expensive. We can furnish sockets in the most popular finishes, such as old brass, brush brass, oxidized copper, polished nickel, etc.

Special finishes, occasionally used, we do not carry, but are prepared to ship on short notice to special order.

In ordering special finishes not standardized, samples showing the finish should be furnished.

Standard packages of sockets or receptacles in special finishes are the same as regular finish.

Regular and special finishes of one List number may be assorted to make up the standard package quantity, except as noted in discount sheet.

Special finish on extra chain, add to list per foot .03 cents.

Special finish on balls only for pull sockets, add to list .03 cents.

Special finish for chain guides, sold separate from sockets, add to list .03 cents.

* When ordered in lots of 500 of one List number and one finish, this list will be reduced .03 cents.

† No advance.

•Unassembled Sockets

We are prepared to supply to order any of the brass shell sockets, unassembled, for the particular use of fixture manufacturers.

These sockets, when shipped unassembled, are packed in paper boxes (as per illustration) with the shells and the caps in the upper layer, thus making it possible to refinish the shells without touching the interiors until they are called for.

The interiors are in the lower layer, complete with shell lining and the cap lining.

This makes a mighty convenient way of carrying these goods for refinishing.

The shells used in the key sockets are interchangeable with those on the pull sockets.

The price for unassembled sockets is the same as for regular goods.

•Unlacquered Shells

We are prepared to supply to special order, sockets with shells polished but not lacquered, for refinishing purposes.

Sockets can be supplied in this way, either assembled or unassembled. "The Shurlok is not supplied with unlacquered shells."

The price is the same as for regular goods.

* National Electrical Code Standard. Illustration is 3/4 of full size.

P & S SOCKET PARTS

We give below a list of various parts making up P & S devices so that extra may be ordered. None of these prices apply to Shurlok sockets or receptacles of which parts are sold only under special conditions at special quoted prices.

When the device is of metal we will supply either brush or polished brass. Other finishes on these parts take one-half the advance for special finishes.

No. 243—No advance for polished brass. All other finishes take one-half of the advance on standard brass sockets (see page 91). Socket is fitted with 15 inches No. 14 stranded S. B. New Code rubber covered wire. Sockets with longer wires furnished to order. Extra wire 6 cents list, per foot, each conductor.

No. 216 and 429 have cap and shell of substantial brass and threaded with a fine thread. There is a set screw provided on the cap so that the lower shell cannot back out of place when properly set up. The center spring contact is of heavy phosphor bronze. The fiber lining may be readily removed for the purpose of refinishing the shell.

See data pages for list of outlet boxes which may be used with the above rosettes.

P & S 1170

P & S 1171

P & S Fixtures

With Rosette and Fixture Loops

A very handsome and inexpensive fixture can be made by using rosette No. 200 in connection with fixture loop No. 1170, which screws into the cap of socket, and fixture loop No. 1171 with threaded shank and hexagon nut which is attached to rosette.

In using this rosette you save the cost of a canopy, canopy insulator or insulating ring, insulating joint and hickey. This rosette also has a wide range of use in connection with pendent drop cord work as shown in illustration.

P & S Fixture Loops

Schedule "XA"

List No.	Description	Carton Quantity	Std. Pkg.	Pkg. Wgt.	List Price Each
1170	Threaded shank $\frac{3}{8}$ inch, to fit $\frac{1}{2}$ inch cap socket.....	50	100	14 lbs	\$0.16
1171	Threaded shank $\frac{3}{8}$ inch, with hexagon nut.....	50	100	15 lbs	.19

Brush brass is the regular finish. There is no extra charge for polished or old brass finish.

For all other finishes advance the list 3 cents.

P & S RECEPTACLES

Sign and Outlet Box Receptacles

P & S 61877

P & S 427

P & S 102704

P & S sign receptacles are equipped with contact shells very rich in copper. These contact shells are thoroughly reinforced, so there is no possibility of the shell being pulled out of place.

Bronze screws are used to fasten the contact shell in place. The terminal contact plates and screws are of brass.

Receptacles with the terminal contact plates of copper, and with screws copper plated, can be supplied at an advance of 6 cents list.

FOR METAL SIGNS AND OUTLET BOXES

Schedule "C"

List No.	Description	Carton Quantity	Std. Pkg.	Pkg. Wgt.	List Price Each

P & S RECEPTACLES

Sign Receptacles

P & S 61960

P & S Ready Wired Sign Receptacles are designed for use where signs or border lights are being constructed in considerable quantities, and where lights are to be placed at equal distances apart.

All terminals are soldered to the wire, after which they are made thoroughly weatherproof by compounding.

The necessary screws are supplied with each receptacle.

The punch required for these receptacles is 1½ inches in diameter.

Screw holes are spaced 1½ inches on centers.

The wire used is New Code double braid, rubber covered stranded wire.

These goods are not carried in stock already wired up. But the parts are stocked which enables the factory to assemble any order within a few hours of its arrival.

These receptacles may be supplied in strings of irregular lengths (to specifications) with whatever wire is required, remaining on the end of the string, absolutely eliminating waste of labor and material on the part of the user.

Extra wire on the end of the streamers will be charged for at 5½ cents per foot list, each conductor, for No. 14 and 6 cents per foot list, each conductor, for No. 12.

The list price for receptacles spaced more than 30 inches apart can be determined by adding 99 cents per hundred receptacles per inch to the 30 inch list on No. 14 wire and \$1.12 per hundred receptacles per inch to the 30 inch list on No. 12 wire.

Standard Package—250 of one number.

Wiring Devices

P & S DECORATIVE SOCKETS

P & S 61420

Specifications

P & S ready wired decorative sockets are constructed in the following way:

The wire is permanently attached to the socket by mechanical means, and then soldered, so that a perfect electrical connection is insured between the wire and the socket.

The cap is then put in place, and a weatherproof compound poured through the hole in the cap, covering all the contacts and exposed metal, as well as filling up all the space inside the cap.

This compound is flush with the top of the cap, making the installation absolutely waterproof and weatherproof.

These goods are ordinarily shipped in barrels, for which no additional charge is made, but if specified on the order, they can be shipped packed on reels, for which there will be an extra charge to cover the cost of the reel.

While these ready wired decorative sockets are designed primarily for festooning, they are used with great success in outlining buildings, towers and spires.

P & S Ready Wired Porcelain Sockets

P & S ready wired decorative porcelain sockets, illustrated above, are wired with New Code stranded single braid rubber covered wire.

We can ship from factory on receipt of order Nos. 66087, 66093, 66099, 66114, 66122 and 66134.

Any of the other numbers can be supplied promptly, as a large stock of parts ready to be wired up are carried at factory, and any order can be filled within a few hours after its arrival.

These goods are put up in lengths of about 500 feet and will be shipped in these lengths unless otherwise specified.

Special lengths will be supplied (subject to specifications) and if wanted, additional lengths of wire can be supplied on each end of the streamer.

Extra wire on the end of the streamers will be charged for at 5½ cents per foot list, each conductor, for No. 14, and 6 cents per foot list, each conductor, for No. 12.

The list price for sockets spaced more than 30 inches apart can be determined by adding \$0.90 per hundred sockets, per inch, to the 30 inch list of No. 14 wire, and \$1.02 per hundred sockets, per inch, to the 30 inch list on No. 12 wire.

Standard package—250 of one List number.

This compound is flush with the top of the cap, making the installation absolutely waterproof and weatherproof.

These goods are ordinarily shipped in barrels, for which no additional charge is made, but if specified on the order, they can be shipped packed on reels, for which there will be an extra charge to cover the cost of the reel.

While these ready wired decorative sockets are designed primarily for festooning, they are used with great success in outlining buildings, towers and spires.

P & S Mica Ready Wired Sockets

The ready wired decorative mica sockets, illustrated and listed on this page, are wired up with New Code stranded single braid rubber covered wire.

Every device on this page is approved by the Underwriters' Laboratories.

A large supply of parts are carried at factory, so that any of the List numbers listed on this page can be supplied within a few hours after the arrival of the order.

These goods are put up in lengths of about 500 feet, and will be shipped in these lengths unless otherwise specified.

Special lengths may be supplied (subject to specifications) and, if wanted, extra lengths of wire can be supplied on each end of the streamer.

Extra wire on the ends of the streamer will be charged for at 5½ cents per foot list, each conductor, for No. 14, and 6 cents per foot list, each conductor, for No. 12.

The list price for sockets spaced more than 30 inches apart can be determined by adding \$0.90 per hundred sockets, per inch, to the 30 inch list on No. 14 wire, and \$1.02 per hundred sockets, per inch, to the 30 inch list on No. 12 wire.

Standard Package—250 of one List number.

Wiring Devices

P & S DECORATIVE RECEPTACLES

P & S 63

Specifications

P & S ready wired decorative receptacles are constructed in the following way:

The wire is permanently attached to the receptacle by mechanical means, and then soldered, so that a perfect electrical connection is insured between the wire and the receptacle.

The cap is then put in place, and a weatherproof compound poured through the hole in the cap, covering all the contacts and exposed metal, as well as filling up all the space inside the cap.

This compound is flush with the top of the cap, making the installation absolutely waterproof and weatherproof.

These goods are ordinarily shipped in barrels, for which no additional charge is made, but if specified on the order, they can be shipped packed on reels, for which there will be an extra charge to cover the cost of the reel.

While these ready wired decorative receptacles are designed primarily for festooning, they are used with great success in outlining buildings, towers and spires.

P & S Porcelain Ready Wired Receptacles

The receptacles listed on this page are wired with New Code stranded single braid rubber covered wire. Every device is approved by the Underwriters' Laboratories.

A large supply of parts is carried at factory ready to assemble within a few hours of the arrival of the order.

These goods are put up in lengths of about 500 feet, and will be so shipped unless otherwise specified.

The supporting screw holes are spaced 2½ inches on centers.

Special lengths may be supplied (subject to specifications) and, if wanted, extra lengths of wire can be supplied on each end of the streamer.

Extra wire on the ends of the streamers will be charged for at 5½ cents per foot list, each conductor, for No. 14, and 6 cents per foot list, each conductor, for No. 12.

The list price for receptacles spaced more than 30 inches apart can be determined by adding \$0.90 per hundred receptacles, per inch, to the 30 inch list on No. 14 wire, and \$1.02 per hundred receptacles per inch, to the 30 inch list on No. 12 wire.

Standard Package—250 of one List number.

P & S Pendent Switches

Pendent Cap, Brush Brass

These switches are provided with double bushings, the inner one having a hole $\frac{1}{8}$ inch in diameter, suitable for No. 16 approved lamp cord.

The inner bushing can be removed when larger cord is to be used, leaving another bushing with $\frac{1}{4}$ inch hole, suitable for No. 16 approved portable cord.

The shells automatically lock by a slight turn and have a recess in the bottom, which protects button from mechanical injury.

BENJAMIN SOCKETS

No. 413
Angle SocketNo. 463
Mission Socket

Angle Sockets

Schedule 3

Angle sockets are designed for fixture, bracket, window, or showcase lighting, where the axis of the lamp is desired at an angle of 90 degrees with the attaching surface. They render angle nozzles unnecessary; thus make wiring easy. Nos. 597-599 are pull angle sockets with a reliable double break in series. Supporting bushing is attached to main shell. Cap connection is therefore relieved of all strain. The pull member is supplied with a short length of metal ribbon passing between reflector and lamp. This permits a comparatively straight downward pull regardless of size and form of reflector. Standard length chain is 8 inches; extra lengths list at 14 cents per foot. Standard finish is brush brass. For special finishes, add 6 cents list.

List No.	Description	Std. Pkg.	Pkg. Wt. Lbs.	List Price Each
411 [▲]	Keyless socket, $\frac{1}{8}$ inch	50	8	\$0.50
451 [▲]	Keyless socket, $\frac{1}{4}$ inch	50	8	.56
431 [▲]	Keyless socket, $\frac{3}{8}$ inch	50	8	.56

453	Key socket, $\frac{1}{4}$ inch	50	8	.62
433	Key socket, $\frac{3}{8}$ inch	50	8	.62
597	Pull socket, $\frac{1}{8}$ inch	50	8	.92
598	Pull socket, $\frac{1}{4}$ inch	50	8	1.00
599	Pull socket, $\frac{3}{8}$ inch	50	8	1.00

Mission Sockets

Schedule 3

Mission Sockets consist of socket cover with shade holder and special porcelain receptacle. The cover constitutes the socket shell, to which a bushing is firmly attached on the side in case of the angle device, and in the cap, in case of the suspension device. It is wired by simply removing the cap. The square embossment at the base of the bushing will seat $\frac{3}{4}$ inch square casing. The use of the usual solid brass cube is therefore rendered unnecessary, while the wires lead straight in, instead of through the angular opening of the cube. They are regularly furnished unfinished. For finishes of any kind, add 14 cents list.

List No.	Description	Std. Pkg.	Pkg. Wt. Lbs.	List Price Each
443 [▲]	Keyless socket, $\frac{1}{8}$ inch side bushing	50	20	\$0.84

Porcelain-Lined Sockets

MEDIUM SCREW BASE
(660W—600V)

Schedule 3

Porcelain-Lined Sockets are strong and highly insulated weatherproof sockets for medium screw base lamps. Socket terminals are widely apart. Binding terminals are separated from the enclosing shell by porcelain wall. A separable base permits ready access to the binding screws. Its parts are firmly held in place by a threaded clamping ring, or by the holders attached. They are thus serviceable for both in- and out-door work, e.g., where wires are run in exposed conduit; in outlining buildings; with large unit lamps in one-light fixtures; on 600-volt street railway circuits; in short, wherever there is need of a highly insulated keyless socket. Sockets will be supplied on special order in copper. For lamp grip add 14c list. For holders, see below. Brass holders are ventilated and have spring clips which prevent their loosening and falling.

Drop Cord Sockets

Schedule 3

The Drop Cord Socket is a one-piece porcelain pendant socket with threaded bushing constituting the cap. The bushing has a 1/4 inch opening for accommodating reinforced cord, but will also grip individual wires in ordinary cord. Mfr. No. 241 has no positioning offsets, but is furnished with quick-break lever switch.

No. 4211

No. 69

No. 4274

No. 695

Porcelain-Lined Sockets

MOGUL SCREW BASE

660W-600V

Schedule 3

Porcelain-Lined Sockets are especially adapted for the use of Mogul screw base lamps. They are highly insulated, keyless sockets with a rating of 660 watts—600 volts. No. 4228 is the same as No. 4210 except that it has a two-piece holder for glassware designed to be supported from the inside, such as Alba reflectors and hemispheres. Both sockets may be ordered tapped $\frac{1}{8}$ inch without change in price. For copper casings and holders add 10 per cent.

List No.	Description	Std. Pkg.	Wt. Lbs.	List Price Each
4210 ^a	With brushed brass shell, tapped $\frac{3}{8}$ inch.....	20	12	\$1.96

Porcelain Sockets

MOGUL SCREW BASE

660 W—600 V

Schedule 3

Porcelain Sockets are intended for Mogul screw base lamps. Nos. 69 and 169 are adapted for attaching to a surface or bracket by means of screws passing through the base. Screw holes are spaced $1\frac{1}{4}$ inches on centers. Nos. 4274 and 4276 have brass cover with bushing, and are adapted for interior work. Wires in No. 69 lead in at the sides; in other sockets at the base. They have spring center contact, and binding screws are accessible from the central opening. They are one-piece sockets for low-voltage circuits not requiring cut-out or short-circuiting mechanism. With fittings, No. 8-32 machine screws are furnished. For lamp grip add 14 cents list. Iron parts are galvanized.

BENJAMIN SPECIALTIES

No. 903

Bushing for 903A
Counterbored for Heavy Cord

Bushing for 903C
with Set Screw Insulated Tip

No. 904

No. 907

Attachment Plugs

Attachment Plugs 903-903E are neat and practical. An ingeniously devised swivel shell—a feature protected by patents—makes it possible to attach and remove the plug quickly and securely without turning the device or twisting the cord. Each is provided with an effectual cord-gripping means contained in the cap, and will take either plain or reinforced cord up to $\frac{1}{2}$ inch in diameter. No. 903A has a counterbored bushing for accommodating heavy asbestos heater cord. No. 903C has a metal set screw with insulated tip for holding the outer braid. The entire cord is gripped—the ends thus kept from fraying. No. 903E is intended for use with small cord.

Attachment Plug No. 904 is like No. 903, except that it has a molded ring instead of fiber washer, and a bushing of smaller diameter. It is thus easier to insert the plug in a socket, where as in the case of certain forms of glassware, the available space for attaching is limited. No. 907 is a solid plug with the cord-gripping feature of No. 903, but has no swivel shell.

919	Non-Swiveling Separable Plug.....	100	10	.35

No. 95

No. 96

Current Taps

Schedule 3

Current Taps 95-95½ have swivel shell whereby they may be attached and fixed in any desired position for leading out the cord, without turning the device. Porcelain parts are concealed. The liability to breakage is therefore minimized, and the finish may be made to correspond with the fixture. A bead on the shell permits the transfer of any standard shade holder, thus securing the proper relation of the shade to the lamp. A reliable grip holds the cord securely. Bushing with $\frac{1}{4}$ inch opening is regularly supplied.

Nos. 96-96½ likewise have swivel shell, and are designed to facilitate the attaching and detaching of portable devices. They are provided with lever switch which in case of No. 96 controls the lamp. The series form is adapted for use with devices where it is necessary to place the lamp in series to act as resistance. By means of the lever switch the plug connection may be short-circuited and the lamp left burning full. Standard finish is brush brass.

BENJAMIN SOCKET CLUSTERS AND ADAPTERS

No. 853
Adjustable Socket ClusterNo. 952
Adjustable Socket ClusterNo. 922 1/2
Two-Light Adapter

Adjustable Socket Clusters

Schedule 1

Adjustable Socket Clusters are designed for use with ceiling or pendent dome fixtures, stand lamps in dining rooms, reading rooms, etc., where it is desirable to adjust and fix the lights in special relation to the sides of the dome or reflector. The socket may be turned to any position between two points 180 degrees apart, and locked by means of a screw. By removing the socket cap, easy access is gained to the binding screws. They are therefore easily wired. 2 and 4-light clusters may be ordered wired two in series for operating 110-volt Mazda lamps on 220-volt circuits. Standard finish is brush brass.

List No.	Description	Std. Pkg.	Wt. Lbs.	List Price Each
852 ^A	2-light with 3/4 inch bushing	10	5	\$1.20
853 ^A	3-light with 3/4 inch bushing	10	6	1.56
854 ^A	4-light with 3/4 inch bushing	10	7	1.92
952	2-light with plug, wired	10	5	1.50
953	3-light with plug, wired	10	6	1.86
954	4-light with plug, wired	10	7	2.22
955	2-light with plug, wired with pull chain	10	5	2.22
956	3-light with plug, wired with pull chain	10	6	2.94
957	4-light with plug, wired with pull chain	10	7	3.66

Two-Light Adapters

Schedule 3

Two-Light Adapters are intended for doubling the outlets of a given socket, while adapting them for individual reflectors. No. 922 1/2 is especially serviceable for burning two lamps in series. They are furnished either with plug, wired, or with 3/4 inch bushing for stem, not wired. In the former case they are attached by means of a swivel shell. Outlets are at an angle of 14 degrees with the vertical, and with suitable reflectors permit the use of 25, 40 or 60-watt lamps. Standard finish is brush brass.

822 ^A	Multiple and series, 3/4 inch bushing	10	5	\$1.40
922	Multiple with plug, wired	10	5	1.76
922 1/2	Series with plug, wired	10	5	1.76

No. 91
Socket ExtensionNo. 99
Tungsten Adapter

Socket Extensions

Schedule 3

The Socket Extension offers a convenient means for attaching glassware where the socket outlets do not otherwise permit it. The shell is provided with a bead for taking standard shade holders. It increases the length of the socket only 1 1/4 inches, and is especially serviceable in connection with flush sockets or ceiling receptacles. Standard finish is dipped brass. For other finishes add 5 cents list.

List No.	Description	Std. Pkg.	Wt. Lbs.	List Price Each
91 ^A	Socket Extension only	50	5	\$0.35

Tungsten Adapters

Schedule 3

Tungsten Adapter is designed for changing the angle of lamps to the vertical where individual reflectors are desired. An efficient light distribution is thus secured. A swivel shell permits the complete revolution of the socket, while the hinged joint allows a wide range of angular adjustment. It may therefore be used to advantage in any case requiring a change in the angle of attaching. Standard finish is brushed brass.

99 ^A	Tungsten Adapter	25	5	\$0.96

PAISTE MOLDING TABLET FITTINGS

Molding Tablet No. 4090— $\frac{1}{4}$ size
With Cover Off, Showing Method of WiringNo. 4109— $\frac{1}{4}$ size
With Cover Off, Showing Method of Wiring

Molding Tablets

Molding Tablets are used for making single or double branches in either 2- or 3-wire molding. The illustration is that of a single 2-wire branch on 2-wire molding, and besides the fact that it is an "approved" fitting, the economy in its use is enough to more than pay its original cost.

In using tablets it is not necessary to cut either the molding or the wires.

The wires in every case are carried right through, simply leaving enough slack to loop over the bottom part; the molding does not have to be cut, as the tablets set on top. The branch wires start off from set screws, and a neat cover conceals everything.

List No.		Carton Quantity	Std. Pkg.	Pkg. Wt.	List Price Each

With Cover Off, Showing Method of Wiring

Molding Cross Overs

Cross Overs are for use where a new line of molding must be carried across another line already in place.

This Cross Over is very simple, consisting of a porcelain channel piece for the wire runways, with a neat porcelain cover over all.

List No.		Carton Quantity	Std. Pkg.	Pkg. Wt.	List Price Each

PATTERSON SURFACE RECEPTACLES AND PLUGS

10 and 20 Amperes—250 Volts

No. 3300
Conduit Type Surface Receptacle

No. 3200
Wood Molding Type Surface Receptacle

Conduit Types

Conduit type receptacles and plugs are specially adapted for conduit work on side walls, on account of having the surface of the porcelain flush with the brass face plate.

Surface Boxes, Receptacles and Plugs

List No.	Size Surface Plate	Size Pipe Tapped For	Ampere	Finish	Std. Pkg.	List Price Each
3300 ^A	3 x 2 1/8 ins.	1/2 in.	10	Brushed-brass	25	\$3.00
3350 ^A	3 x 2 1/8 ins.	1/2 in.	10	Black-enamel	25	2.10
3400 ^A	3 1/2 x 3 ins.	3/4 in.	20	Brushed-brass	10	4.20
3450 ^A	3 1/2 x 3 ins.	3/4 in.	20	Black-enamel	10	3.00

Surface Boxes and Receptacles, No Plugs

3300R ^A	3 x 2 1/8 ins.	1/2 in.	10	Brushed-brass	..	\$2.70
3350R ^A	3 x 2 1/8 ins.	1/2 in.	10	Black-enamel	..	1.80
3400R ^A	3 1/2 x 3 ins.	3/4 in.	20	Brushed-brass	..	3.60
3450R ^A	3 1/2 x 3 ins.	3/4 in.	20	Black-enamel	..	2.40

Surface Receptacle Plugs Only

502280 ^A	10 Ampere, Brass-covered, for Nos. 3300 and 3350 Receptacles.....	\$0.36
502281 ^A	20 Ampere, Steel-covered, for Nos. 3400 and 3450 Receptacles.....	.72

* Nos. 3400 and 3450 will be furnished with reducing nipples to take 1/2-inch conduit without charge when specially ordered.

Molding Types

Molding-type receptacles and plugs provide an easy first-class method of using 10 ampere and 20 ampere receptacles on a line of molding with minimum projection from wall. Wood-molding is cut square and runs at both ends, almost an inch inside of the metal casing which itself fits down close over all but the circular face of the receptacle.

Total depth from wall to front surface of receptacles is only 1 1/2 inches, in both 10 ampere and 20 ampere sizes.

FOR METAL-MOLDING

Surface Receptacles, Casings and Plugs

List No.	Size Over All	Ampere	Fits Metal Molding	Finish	Std. Pkg.	List Price Each

*Electrolier Type of Push Button Switches

This switch gives the same alternate, consecutive, or simultaneous control of a group of lights that can be obtained by using any other types of electrolier switches, and in addition it has a great advantage over other types because the lights can be extinguished at any time by simply pushing the black button.

This convenience appeals greatly to the householder who has hitherto had to snap an electrolier switch through all its different combinations before the lights could be put out.

The external appearance and dimensions are the same as the regular push button switches, and this switch fits all standard plates and wall cases.

THREE SECTION CONNECTIONS

This switch operates as follows:

	Pearl Button	Black Button
First Push:	Lights section One.	Off
Second Push:	Lights sections One and Two.	Off
Third Push:	Lights sections One and Two and Three.	Off

No. 4052

Plates for Push Button Switches

Schedule "S"

List No.		Dimensions Height Length Inches Inches	Carton Quantity	Std. Pkg.	Pkg. Wt. Lbs.	List Price Each
4077	For One Switch.....	4½ x 2¾	25	*	23	\$0.26
4078	For Two Switches.....	4½ x 4½	10	*	20	.51
4079	For Three Switches.....	4½ x 6¾	5	*	19	.76

The above plates are stamped from .040-inch rolled brass and have reinforced bevelled edges to make them strong. The screw holes are deeply countersunk to rest upon the frame of the switch, so that the plate will not dip in under pressure of the screws.

WITH ROUNDED CORNERS AND EDGES

4081	For One Switch.....	4½ x 2¾	25	*	23	\$0.26
4082	For Two Switches.....	4½ x 4½	10	*	20	.51
4083	For Three Switches.....	4½ x 6¾	5	*	19	.76

The above plates are stamped from .040-inch rolled brass and have reinforced edges to make them strong. The screw holes are deeply countersunk.

WITH REGULAR SQUARE EDGES

2301	For One Switch.....	4½ x 2¾	25	*	32	\$0.63
2302	For Two Switches.....	4½ x 4½	10	*	25	1.26

The above plates are stamped from .060-inch rolled brass and are as strong and rigid as solid plates, and have the advantage of a hollowed back.

STANDARD SIZE SOLID PLATES

Made from ½-inch hard rolled brass.

4051	For One Switch.....	4½ x 2¾	25	*	40	\$0.63
4052	For Two Switches.....	4½ x 4½	10	*	35	1.26
4053	For Three Switches.....	4½ x 6¾	5	*	35	1.89
4054	For Four Switches.....	4½ x 8¾	5	*	35	2.52
4055	For Five Switches.....	4½ x 10	1	*	35	3.16
4056	For Six Switches.....	4½ x 11½	1	*	35	3.78
4057	For Seven Switches.....	4½ x 13¾	1	*	35	4.41
4058	For Eight Switches.....	4½ x 15¾	1	*	35	5.04

SMALL SIZE SOLID PLATES

Made from ½-inch hard rolled brass.

4041	For One Switch.....	4 x 2¼	1	*	30	\$0.63
4042	For Two Switches.....	4 x 4½	1	*	28	1.26
4043	For Three Switches.....	4 x 5½	1	*	28	1.89
4044	For Four Switches.....	4 x 7¾	1	*	28	2.52
4045	For Five Switches.....	4 x 9¾	1	*	28	3.16
4046	For Six Switches.....	4 x 11¾	1	*	28	3.78
4047	For Seven Switches.....	4 x 13¾	1	*	28	4.41
4048	For Eight Switches.....	4 x 15	1	*	28	5.04

On horizontal gang plates, switches in gang are spaced 1½ inches between centers.

TANDEM PLATES

Made from ½-inch hard rolled brass.

4072	For Two Switches.....	8½ x 2¾	1	*	35	\$1.35
4073	For Three Switches.....	11¾ x 2¾	1	*	35	1.89
4074	For Four Switches.....	15¾ x 2¾	1	*	35	2.52
4075	For Five Switches.....	19 x 2¾	1	*	35	3.16
4076	For Six Switches.....	22½ x 2¾	1	*	35	3.78

On tandem plates, switches are spaced 3½ inches between centers.

Tandem plates fit the standard wall cases.

*100 single plates, or the equivalent in gangs, is a standard package.

*National Electrical Code Standard.

SERIES—PARALLEL HEATER TYPE

These switches have been specially designed for use on heating and cooking apparatus. They are arranged for three heats—"High-Medium-Low" or "Low-Medium-High" with an "Off" position, and are particularly suited to the control of ovens, hot plates, ranges, flatirons, etc.

Off—High—Medium—Low

Broken Packages, 20% extra.

Connectors will be drilled for standard wire, when so specified, without extra charge.

Knife Switches, Fuses and Cut-Outs

DOSSERT WIRE CONNECTORS

Dossert Solderless Connectors

These devices are used to connect conductors and make neat and strong joints without the use of solder.

2-WAY CONNECTORS

Type A—Standard Connector

Type A—2-Way, Showing Detail

Type A Connectors are for use on cables, stranded or solid wires, rods and tubing. They should not be used on a conductor that is to be subjected to heavy tensile strain.

In ordering Type A Connectors for concentric laid cables give circular millage of cable, or exact diameter of cable, or exact diameter of one wire and number of wires.

Type A for solid wires, rods and tubing. Give gauge number of wire, or exact diameter of rod, wire or tube, or circular millage of rod.

Type A for rope laid and flexible cable. State that cable is rope laid or flexible and give circular millage, or gauge number, or exact diameter, or send sample of cable. The diameter for given size of rope laid or flexible cable is considerably larger than that of the same size of concentric laid cable.

Type B—Strain Connector

Part Cross-Sectional View of Type B 2-Way

2-Way Type C

Elbow

Type B Connectors are for use on stranded wires or cables, and are designed to make a joint which will withstand heavy tensile strains. They are not made for wires smaller than No. 0.

It is necessary to know the number of wires in a cable in furnishing Type B Connectors, for the reason that the diameter of the core over which the inner ring fits varies according to the number of wires in the cable.

Type C—High Voltage Connector

Type C Connectors are made with round nuts and nipples for use on high tension circuits.

Elbow

This elbow makes an admirable right angle connection, especially where a right angle bend is to be made with a solid conductor going into panels and in connection with oil switches.

Prices on the above several types, see following page.

Type Z Equalizer

Type Z Equalizer

Type Z Equalizer, which is a combination of two Cable Taps, is used to equalize the load between two power cables that run parallel, or at right angles, to each other. The connections are made in the same manner that a Cable Tap is secured to the main cable.

They can be furnished for equalizing the load on any two sizes of feeder.

When ordering, give the distance between centers of cables, circular millage of cable, and state whether cables are concentric or rope laid, and whether they are parallel or at right angles to each other.

Prices on application.

DOSSERT WIRE CONNECTORS

Dossert Solderless Connectors

For illustrations of the several types of Dossert Connectors listed below, see preceding page. When ordering by list numbers for sizes from No. 14 to No. 0000 always specify whether stranded or solid.

Knife Switches, Fuses and Cut-Outs

DOSSERT WIRE CONNECTORS

Cable Tap

3-Way

Y Connector

Dossert Solderless Connectors

Cable Taps

The Cable Tap is used to connect a branch wire, rod or bleeder to a main wire, rod or feeder. It does not splice the main, but simply clamps on to it.

The Cable Tap can be furnished to connect any size branch wire to any size main wire.

3-Way Connector

The 3-way is used to make a main line splice and to connect a branch wire at the joint.

"Y" Connector

The "Y" is used to make a 3-way splice when the cables are not at right angles to each other. It can be furnished to connect any three sizes or combinations of wire, cable or rod.

When ordering by list numbers for sizes from No. 14 to No. 0000 always specify whether stranded or solid.

2000000	542063	9.00	542094	9.00	542125	9.00	542156	18.00

* Prices of 14 to 4 inclusive, and 3 to 1 inclusive, respectively, are the same, but in ordering state exact size wanted, as inner bore of sleeve must be drilled exactly to fit wire to be connected up.

Reducers

Reducers are made in 2-ways and 3-ways. The accompanying cut shows a 2-way reducer.

Any combination of reduction can be effected by means of these reducers, and they are used to a great extent in connecting solid round busses on switchboards to feeder cables.

To ascertain the list price of a 2-way reducer, take one-half of the price of a regular 2-way of the corresponding size of each end. For example: Reducer from 500000 C.M. to No. 0000.

Reducer

$\frac{1}{2}$ of 2-way for 500000 C.M.	\$1.56
$\frac{1}{2}$ of 2-way for No. 000066
The list price would then be	\$2.22

DOSSERT WIRE CONNECTORS

Stud Connector, Type F

Stud Connector, Type M

Dossert Solderless Connectors

Type F

Stud Connector Type F is used to connect a wire or cable to a stud or threaded rod.

When ordering Type F Stud Connectors, give diameter and number of threads per inch of stud or rod that the connector is screwed onto, the circular millage of cable or gauge number of wire, and state whether wire is solid or stranded.

Type M

Type M is used to connect wires or cables to flat strips or blocks.

When ordering Type M Stud Connectors, give diameter and length of stud and number of threads per inch, the circular millage of cable or gauge number of wire, and state whether wire is solid or stranded.

List price of Type F and Type M Stud Connectors same as a two-way of corresponding size less 20%, except when special large diameter or length of stud is specified.

Detail of Insulating Cover

Insulated Joint Complete

Dossert Insulating Covers

For Use with Connectors

The material used in the manufacture of this cover is heat-resisting, non-hygroscopic, of good dielectric strength and mechanically very strong. The arrangement is in two parts, with a threaded coupling and shoulders which lock against the ends of the connectors, thus holding firmly in position as shown in above sectional view. The cover here, as shown above, is for conductors from No. 0, B. & S. Gauge, to 250,000 cir. mils. A wide range of conductor openings is provided to accommodate various thicknesses of insulation. This cover can be furnished for a number of types and sizes of Dossert connectors.

List No.	Description	List Price Each
542157	Connector and cover for No. 1 to No. 14 C.M. Conductor.....	\$0.92
542209	Connector and cover for No. 4 to No. 14 Conductor.....	.72
542158	Connector and cover for No. 0 Conductor.....	1.28

542161	Connector and cover for No. 0000 Conductor.....	2.04
542162	Connector and cover for 250,000 C.M. Conductor.....	2.28

Grounding Device

Grounding Device

The Grounding Cap is used for connecting ground wires to the end of a pipe. One end of the cap is threaded to take a stranded gas pipe, while the other end is fitted with a compression nut and tapered sleeve, by means of which the wire is connected to cap.

When ordering, give size of gas pipe and circular millage or gauge number of wire, and state whether stranded or solid conductor.

List No.	Size Wire	Size Pipe Inches	List Price Each

Knife Switches, Fuses and Cut-Outs

MATTHEWS FUSE SWITCH

Ready to Hang

Showing Inside of Box

Showing Switch Removed

Points of Merit

The Matthews Fuse Switch combines in one device two very important and desirable pieces of apparatus required in the operation of overhead primary lines, viz: a fuse block and a primary line disconnecting switch.

It is a self indicating trouble finder. When fuse blows because of trouble on the line, it throws the section protected by that particular switch into darkness. The customers call in and report "lights out." Reference to service maps shows the exact location of this box and the trouble is then located with ease. The bottom opening is covered with a white mica "telltale." When fuse is blown it is removed. Trouble man is saved an unnecessary climb if he sees it in place from the ground.

The Matthews Fuse Switch eliminates the trouble, damage and danger caused by the recurrent surge of the line when fuse blocks are used. This is because the expulsion fuse discharges its gases positively and breaks the arc.

Its uses cover a wide range of effective protection; it can be employed as a line disconnecting switch, cribbing switch or branch main switch. It can be employed as a limit switch on consumers' connections where there is any question as to whether (for short periods) more energy than that for which they have contracted is being used.

Matthews Fuse Switch has a reasonable first cost. Its cost of installation is very low (it being only necessary to hook over cross arm and connect the leading in wires). Low cost of actual fuse renewals and low cost of maintenance.

Figures 1, 2, 3 and 4 show the operation of the device. By observing these cuts it will be seen that a troubleman cannot be injured. Matthews Fuse Switches fulfill admirably the requirements understood by the expression "safety first." This is why it has been endorsed by the leading liability insurance companies and the Public Utilities Commissions of many states.

The Type "F" Matthews Fuse Switch is furnished in wood boxes only. It is designed for voltages ranging from 1,100 to 6,600 and capacities from 60 to 100 amperes inclusive. The Type "H" Matthews Fuse Switch is furnished in wood boxes only. It is designed for voltages ranging from 6,600 to 14,000 and for capacities up to 75 amperes. The Type "H" is displacing the more expensive and less efficient oil switch.

Each fuse switch is furnished complete, including fuse cartridge, hanger, "leading in" wires, insulators and fuse wire for one charge.

* These Switches were approved for use on 250-Volt circuits prior to the change of rules adopted by the Underwriters' National Electrical Association at their meeting of March, 1909. We continue to list them as they have greater spacings than the 125-Volt switches of the same description listed above, and may, on that account, be preferred by some, although it will be understood that they will only be approved when installed on circuits of 125 volts and under.

* National Electrical Code Standard.

Paiste "Fusette" Fuse Plugs

This fuse plug with renewable core is a great improvement in plug fuses, which means great economy in fuse plug expense. This fuse plug consists of two parts; the interchangeable holder, into which will fit all the fusettes from 3 amperes to 30 amperes, and the fusette or fuse carrying part. The fusettes are carried in a small porcelain core, called the "Fusette," which is inserted in a permanent holder made up of the cap and screw shell for inserting into the plug cut-out. When a fuse blows only this little fuse core is thrown away and the holder saved for use with a new "Fusette." These new fuse plugs are "approved" fittings for use on all 125-volt circuits, and have given an unusually reliable and accurate record for overload or short circuit. Cross section view shows the position of fuse strip and contact sleeve.

All fuse wire is carefully wound on spools having heavy flanges, which effectually protect the soft fusible metal from abrasion or other mechanical injury; these are then placed in small cans that are properly labeled and sealed so that fuse wire may be stored away for an indefinite time without the slightest depreciation in quality or appearance. For the number of feet per pound, diameter in mils., and the proper length to obtain best results at rated capacity, see above.

Knife Switches, Fuses and Cut-Outs

"D & W" INDICATING ENCLOSED FUSES

NATIONAL ELECTRICAL CODE STANDARD

The mechanical design of "D & W" fuses has been rendered as nearly correct in all particulars as possible to conform to the requirements of the National Electrical Code. Exceptionally heavy fibre tubes with extra long caps are used throughout. Where extreme rigidity is required, as in large fuses, the tubes are fitted inside with steel reinforcing rings which are so placed as to receive the ends of all the screws which hold on the fuse caps. The strength and rigidity obtained by passing these machine screws into the steel bands within the fibre tubes enable the fuse to withstand great mechanical abuse and the severest electrical conditions.

A special feature of "D & W" fuses is, that whenever possible, the copper terminal wires in the fusible links are fastened together so as to be both mechanically and electrically continuous, even before the application of solder.

An important and distinctive feature of "D & W" fuses is the so-called "Bull's-eye Indicator." The location of the indication is absolutely defined and the indication itself is extremely distinct, not requiring close inspection as is the case with other types.

Oil Fuse Cut-out

Oil Fuse Cut-Outs For High Tension Work

In the "D & W" Cut-out the fusible element is placed under a heavy body of special oil. The cutouts are made in three capacities, of 50, 100 and 200 ampere, 2500 volt capacity. Special precautions have been taken to so design the device as to render re-fusing safe for the operator. The cut-out is not intended for use as a switching device. The fusible element is light and readily inserted.

Fuse Box

The service switch is constructed for use both as a cut-out and a switch. It consists of a set of enclosed fuses mounted in an iron box so that they can be made to swing with the cover and open the circuit or to remain in the fuse clip while the cover is open. The fuse box is a device similar to the service switch except that the cover is not provided with any mechanism for withdrawing the fuses from the circuit. They are so designed as to be used on the outside of buildings or in cellars where the wires enter from the subway. In the covers of the service switches are mounted the fuse guides to positively align the fuses in order that the boxes may be readily closed with the fuses properly engaging in the cut-outs. Withdrawal hooks are also mounted in the cover. These grasp the fuses when the levers outside the boxes are given a one-quarter turn. Thus the fuses can be withdrawn from the circuit if desired when the boxes are opened.

Base

Capping

No. 333—Base and Cap

"National" Metal Molding

"National" metal molding consists of two pieces, base and capping, so formed as to "snap" together—the capping "snapping" over the base.

It is finished under the non-corrosive Sherardizing process in which finely divided zinc is driven into the pores of the base metal, effecting an alloy which is not only rust proof but which cannot be scraped off.

It is particularly adapted for steel ceiling, show window, show case, theater or similar construction where appearance, as well as electrical and mechanical safety, is essential.

Bending

The molding lends itself readily to bending and, with reasonable care, may be worked on any radius down to four and one-half inches.

Bends must be made in all cases with base and capping snapped together.

The Screw-and-Slot Principle

The base of "National" metal molding is furnished with a "Keyhole Slot" at each end as shown in illustration.

This "Keyhole Slot" is used in connection with the special Bond Screws furnished in all "National" metal molding fittings.

Punching

The new style "National" hand punch, as shown on another page, is used for punching the "Keyhole Slot" where lengths are cut.

Cutting

Because of the light stock, hacksaw blades having fine teeth and commonly known as "tube saws" should be used for cutting. Some construction men also recommend marking deeply with a file and breaking.

Wire

Single braid wire has been approved for use with "National" metal molding, but it must be laid in and not "fished."

333	Metal molding and capping.....	100 ft.	1000 ft.	40 lbs. \$10.96

No. 344—Base Coupling

No. 436—Fitting Coupling

BASE COUPLING

The "National" base coupling is designed to do the same work for "National" metal molding as does a coupling for rigid conduit, and its use is necessary to obtain the perfect bond between lengths required by the code. The outlines shown in cut illustrate the slotted ends of the molding base which are placed in position over the holes provided at the ends of the coupling and the whole fastened securely to the wall by wood screws passing through both molding and base.

This device prevents loose joints.

No. 334—Cross

No. 335—Tee

Molding Cross and Tee

No. 334 Molding Cross fitting performs the same function as an "X" conduit. The expanded or raised center of the capping affords additional space which permits splicing of wires for junction leads. Although the size has been reduced, more room for the laying in of joints has been provided than in the old style through a deep recessing of the covers.

No. 335 Molding Tee is used in the same manner as a molding taplet or "T" conduit. The capping is expanded or raised, permitting ready splicing of junction leads in the additional space thus afforded. The new "National" screw-and-slot system of coupling, now used in all fittings, makes the use of four and three screws or bolts for installing these fittings unnecessary.

45° Flat Elbow

No. 337
External Elbow

No. 338
Internal Elbow

Flat External and Internal Elbows

The size of these elbows has been reduced. This reduction simplifies the work of breaking around large obstructions. Where it is necessary to break around "I" beams, for example, four of these elbows may now be assembled with short lengths of molding to form a U-shaped unit, which may then be installed as one piece. The new screw-and-slot system of coupling has greatly simplified the installation of the flat-elbow by making the use of two screws or bolts unnecessary. Base and capping of the molding are cut the same length where these fittings are used.

Sherardized

No. 348
One Piece RosetteNo. 423
Standard Sub-BaseNo. 424
Angle Sub-Base**Porcelain Rosettes**

This rosette is arranged to be applied directly over the molding, it being unnecessary to cut the base of the molding to install it, the capping only being removed to allow the introduction of wires into the rosette. It is equipped with metal base plates in dead end form, but is arranged for easy conversion into continuous type by twisting off the ear which blanks the molding opening at one end, and arranged to be supported by the molding.

Installation of this device requires an opening $1\frac{3}{4}$ inches long in the capping.

No. 377
Single Clamp BushingNo. 433
Double Clamp BushingNo. 376
Corner Box**Clamp Bushings**

These fittings perform the same function with "National" metal molding as does a locknut and bushing or conduit, in bushing the molding wherever it joins any fitting of a box type and in locking the molding to any fitting of such type. The clamp consists of two parts, a base and a cap. In installing, the base piece is fastened to the fitting, with the screws provided in all fittings of box type for the purpose. The molding is then fastened to base piece and the cap of the clamp snapped on last over the molding capping with the small up-turned lip inside the box. The double clamp bushing is for connecting two pieces of molding with one opening in outlet box.

The base and capping of the molding are cut the same length when this fitting is installed.

List No.	Mfr. No.		Unit Pkg.	Std. Pkg.	Pkg. Wt.	List Price Each
580057	377	Single Clamp Bushing.....	50	200	8 lbs.	\$0.06

No. 363B
4½ Inch Split Type Cover

No. 363
4½ Inch Split Type Adapter Plate

Split Type Cover and Adapter Plate

No. 363B split type cover is designed for use with No. 363 adapter plate; it is made in split form for use in "picking up" a circuit at an existing fixture outlet without removing or disturbing the fixture. The object of its large size is to form a seat for fixture canopies and so avoid the mutilation and labor necessary to fitting canopies down over the molding.

No. 363 split type adapter plate is designed in conjunction with covers No. 363A and 363B, to care for a troublesome detail of construction for which no fitting of any kind has heretofore been available—the picking up and extension of circuits from existing fixture outlets without removing or disturbing the fixture.

It is arranged with slots and holes through which it can be fastened to any three (3) inch or four (4) inch conduit outlet box with the cover screws provided in such boxes. A special yoke or bridge is furnished with each plate through which it can be hung on any "open cover," "extension plate" or "plaster ring."

List No.	Mfr. No.		Unit Pkg.	Std. Pkg.	Std. Pkg. Wt.	List Price Each
580074	363B	4½ inch split type cover.....	10	40	15 lbs.	\$0.26
580075	363	4½ inch split type adapter plate.....	10	60	20 lbs.	.38

NOTE: When ordering covers 363A or 363B bear in mind they are covers only and that a corresponding number of 363 plates must be ordered with them. Bushing No. 377 or 433 must be used for entering No. 363 with molding, as the "twistouts" in the covers are too small for direct entrance.

No. 441
Flush Switch Adapter

No. 438
Flush Box and Adapter

Switch Box Fittings

No. 442 is a two-gang flush switch adapter. Made in split form to permit building up into large gangs. No. 441 adapter is designed to mount on any of the standard makes of wall cases, the switches or receptacles being removed and remounted upon the cover of the adapter.

No. 438 flush switch box and adapter plate is designed for the installation of flush switches or receptacles on new metal molding jobs. It is especially designed for shallow partitions and brick work.

Bushing No. 377 or 433 must be used for entering these canopies with molding, as the "twist-outs" are too small for direct entrance.

TWO-GANG FLUSH SWITCH ADAPTER

List No.	Mfr. No.	Unit Pkg.	Std. Pkg.	Std. Pkg. Wt.	List Price Each
580078	442	10	100	80 lbs.	\$0.84

SPACERS FOR USE WITH NO. 442 ADAPTER

List No.	Mfr. No.	Type	Builds No. 442 Into	Unit Pkg.	Std. Pkg.	Std. Pkg. Wt.	List Price Per Pair
580079	443	Single	3 Gang	10	100	13 lbs.	\$0.31
580080	444	Double	4 Gang	10	100	25 lbs.	.62
580081	445	Triple	5 Gang	10	100	38 lbs.	.92
580082	446	Quadruple	6 Gang	10	100	50 lbs.	1.22

NOTE: Two No. 443 Spacers may be used in place of No. 444 to build No. 442 into 4 gang, three in place of No. 445 or four in place of No. 446, although the use of 444, 445 or 446 makes a better looking and simpler job.

Flush Switch Plates

These plates are designed for use with "National" flush switch adapter No. 441 and 438. The openings in Nos. 451 and 448 are standardized for use with standard makes of push and rotary flush switches. No. 447 is designed for use with Hubbell switch plug receptacle No. 5547 and similar devices.

No. 448 is designed for use in case a switch or receptacle is removed for relocating and its original outlet used for a junction only.

List No.	Mfr. No.	Type	Style	Finish	Unit Pkg.	Std. Pkg.	Pkg. Wt.	List Price Each
580083	451	Push	Single	Sherardized	10	100	20 lbs.	\$0.19

580085	453	Push	3 Gang	Sherardized	10	100	20 lbs.	.56
580086	461	Rotary	Single	Sherardized	10	100	20 lbs.	.19
580087	462	Rotary	2 Gang	Sherardized	10	100	20 lbs.	.37
580088	463	Rotary	3 Gang	Sherardized	10	100	20 lbs.	.56
580089	447	Plug	Single	Sherardized	10	100	20 lbs.	.19
580090	448	Blank	Single	Sherardized	10	100	20 lbs.	.19

NOTE: "National" Flush Switch Adapters No. 441, 438 and 442 are now made in size to fit all standard flush plates, hence No. 451, 461, 447 and 448 plates are now furnished in sherardized finish only.

Conduit and Wiring Accessories

"NATIONAL" METAL MOLDING

Sherardized

No. 367
Porcelain Cover

No. 404
Coupling

Metal Molding Fittings

No. 367 porcelain cover is used in connection with No. 404 coupling through which the wires are brought. The cover is fastened by means of screws in the face of the coupling.

No. 404 fitting is designed for use as a junction between "National" metal molding and "open work," and should be used in all cases where necessary to pass from molding to this class of construction or to the terminal lugs of meters, knife switches, etc. The coupling is attached to the molding base by means of the screw in the coupling and after the wires have been laid in the capping is brought up flush with the fitting and snapped on over the molding base.

List No.	Mfr. No.		Unit Pkg.	Std. Pkg.	Std. Pkg. Wt.	List Price Each
580110	367	2 hole porcelain cover	10	20	6 lbs.	\$0.16
580111	368	3 hole porcelain cover	10	20	6 lbs.	.16
580112	404	Molding to open work coupling	10	20	7 lbs.	.28

No. 405
Molding Tee

No. 411
Conduit Tee

Tee Fittings

No. 405 and 405A conduit to molding tee is designed for use where a tap from runs of $\frac{1}{2}$ inch or $\frac{3}{4}$ inch conduit to "National" metal molding is desirable, as in cases where a series of side wall outlets are fed from a line of rigid conduit installed close up in the corner on the floor and risers to the outlets run in "National" metal molding.

No. 411 and 411A molding to conduit tee is designed for use where a tap from runs of "National" metal molding to $\frac{1}{2}$ inch or $\frac{3}{4}$ inch conduit is desirable, as in cases where it is necessary to pass from some point in a line of molding on the ceiling to the floor above in conduit.

The new "National" screw-and-slot system of coupling has not only permitted a reduction in the size of these fittings and a marked improvement in their appearance, but has eliminated the use of covers and small screws.

The molding base and capping is cut the same length when fittings No. 404, 405 and 405A are installed, but the base only is cut in installing No. 411 and 411A, the capping continuing over and forming a cover for these fittings.

List No.	Mfr. No.		Unit Pkg.	Std. Pkg.	Std. Pkg. Wt.	List Price Each
580113	405	$\frac{1}{2}$ inch, conduit to molding tee	10	20	15 lbs.	\$0.54

580115	411	$\frac{1}{2}$ inch, molding to conduit tee	10	20	10 lbs.	.38
580116	411A	$\frac{3}{4}$ inch, molding to conduit tee	10	10	6 lbs.	.46

Conduit and Wiring Accessories

"NATIONAL" METAL MOLDING

Sherardized

**Molding Couplings and Elbows**

No. 401 and 401A fittings are designed for use in effecting a junction between "National" metal molding and any fitting having $\frac{1}{2}$ inch or $\frac{3}{4}$ inch conduit knockouts, such as a surface type panel box or any fitting having a $\frac{1}{2}$ inch or $\frac{3}{4}$ inch tapped and threaded boss, such as conduit.

No. 402 and 402A fittings are designed for use as couplings between "National" metal molding and $\frac{1}{2}$ inch or $\frac{3}{4}$ inch conduit. The $\frac{1}{2}$ inch size in particular should be included in all stock orders since its use is necessary, in most instances, in connection with the short lengths of conduit required for passing through floors in metal molding jobs.

No. 403 and 403A fittings are designed for use as elbow couplings between the "National" metal molding and $\frac{1}{2}$ inch or $\frac{3}{4}$ inch conduit.

No. 417 and 417A fittings are designed for use in effecting an elbow junction between "National" metal molding and any type of fitting which is flushed into the wall, such as a flush type panel box, or from which an elbow exit is necessary, as in the case of coming out of a panel box mounted on the surface of a pillar and running back to and rising upon the pillar.

The new "National" screw-and-slot system has not only permitted a reduction in the size of these fittings and a marked improvement in their appearance, but has eliminated the use of covers and small screws.

The base and capping of the molding is cut the same length where fittings No. 401, 401A and 402 and 402A are installed, but the base must be cut $\frac{3}{4}$ inch shorter when installing Nos. 403, 403A, 417 and 417A to permit the capping to lap over and form a cap for these fittings.

Strap Clamp

Metal to Wood Molding Coupling

This fitting is designed for use as a coupling in effecting a junction between an existing run of wood molding and "National" metal molding.

It is arranged for use with Jordan Taplets, or similar types of approved wood molding fittings, and such a fitting must be used in connection with No. 369 where a right angle tap is made from wood molding. In cases where the circuit is picked up at the end of a run of wood molding for extension in metal molding, a wood molding fitting may be dispensed with and No. 369 butted against the backing of the wood molding, from which $\frac{3}{4}$ inch must be cut to allow the wood molding capping to extend over and form a cover for No. 369.

580129	369	Metal to wood molding coupling.....	10	20	5 lb.	\$0.23

Strap Clamp

This strap has been especially designed for use with "National" Metal Molding where same is run over uneven surfaces upon which the capping has a tendency to spring away from the base.

It should not be confused with "National" Clamp No. 345 as no provision is made for fastening it to the surface wired over and it consequently provides no support for the molding.

Conduit and Wiring Accessories

"NATIONAL" METAL MOLDING TOOLS

No. 418

Lever Type Hand Punch

No. 1

To punch the keyhole slot at the extreme end of the molding base, as is required for fittings, set the side stop in position shown in cut No. 1.

To punch additional holes throughout the length of the molding base for purposes of additional support, set the side stop in position shown in cut No. 2.

No. 2

The "National" lever type punch is designed for accurate punching of the keyhole slot. This punch is shipped assembled on an oak base complete with handle. Its use involves no objectionable noise or jar and since all moving parts and the die are of hardened steel, long life is insured through reasonably careful use and keeping it well oiled.

List No.		Unit Pkg.	Std. Pkg.	Std. Pkg. Wt.	*List Price Each
418	Lever type hand punch.....	1	1	12 lbs.	\$6.50

No. 422

Lever Type Hand Shear

The "National" lever type hand shear was designed for cutting the base and capping of "National" metal molding.

It is arranged to shear the base and capping separately, not assembled, the die block being provided with separate grooves for each as shown in illustration. The shear is shipped assembled on an oak base complete with handle. The knives and die are of hardened steel, insuring long life.

List No.		Unit Pkg.	Std. Pkg.	Std. Pkg. Wt.	*List Price Each
422	Lever type hand shear.....	1	1	8 lbs.	\$5.50

*Delivery F. O. B. Factory, Pittsburgh, Pa. For warehouse deliveries write nearest house.

FLEXIBLE TUBING AND FITTINGS

GENERAL

The general demand of the automobile public for electric appliances augments the necessity of proper wiring materials to insure uninterrupted service.

Conductors for this purpose should be flexible, but as flexible rubber insulation deteriorates rapidly, when exposed to oil or other destructive elements, they should be encased in a suitable tubing which will protect them from mechanical injury as well as deteriorating elements.

The use of flexible tubing, in combination with junction and switch boxes, is the most efficient and practical method of automobile wiring. By use of sufficiently large tubing to accommodate parallel runs, and junction boxes from which to distribute various branch runs, not only is the maximum protection afforded, but a great saving in installation expense is also effected.

Flexible Metal Tubing

AUTO STEEL FLEX

Auto Steel Flex and Auto Brass Flex is made of metal strip. Of interlocking construction.

AUTOFLEX TUBE

For encasing and protecting wires in automobiles.

Special Smooth Finish

Made up from selected semi-flexible fiber cord, in the form of a helix, tightly interwoven with strong thread to form a flexible tubing which is treated with a moisture proof compound, over which a covering of tough yarn is braided. The completed material is then impregnated with an oil resisting compound.

It has a hard smooth surface, and is the only fabric tubing on the market which will readily take paint or enamel.

Fiber Cleats

Style No. 1

Style No. 2

Style No. 2A

Hard Fiber Cleats

These cleats are neat, durable, easy to install, good insulators, and on account of the finished appearance they make, are just the thing for office or residence installation.

They were originally designed for telephone wiring only, but are now being used extensively for bell wiring, annunciator systems, time clocks, telegraph outfits, etc. Type E is particularly adapted for fastening electric light wires to switchboards, motor frames, etc.

In ordering be sure to mention color preferred: red, gray or black; otherwise red will be sent.

Conduit and Wiring Accessories

NON-METALLIC FLEXIBLE CONDUIT

"CIRCULAR LOOM"

Circular Loom has a smooth interior which is lubricated with powdered soapstone to facilitate fishing the wires. It is fire- and moisture-resisting, the inner tube being formed of fiber wound spirally and covered by insulating tape with a heavy woven cotton covering or jacket that is saturated with a fire- and water repellent compound and has a distinctive outer protective coating of powdered mica.

"LOOMFLEX"

The Seamless White Canvaslike Inner Tube is formed of special fiber cord interwoven with cotton yarn. The inner surface of the tube is given a thorough coating of powdered soapstone as a lubricant and the result is a firm, smooth and unobstructed raceway through which the wire slides easily and rapidly.

FLEXIBLE STEEL CONDUIT AND ARMORED CONDUCTORS

Flexible Steel Conduit

Twin Conductor

"Sterling" Flexible Steel Conduit

"Sterling" conduit is approved by the underwriters for use anywhere that rigid iron conduit is permitted, even to embedding in concrete. It is made from the highest grade of galvanized steel, and by special patented machinery is spirally wound into a perfect conduit of single strip construction. The layers interlock in such a manner that it is impossible to open up the walls of the conduit, even under the most severe strain. The interior surface is perfectly smooth and presents a perfect raceway for the insertion and extraction of wire.

"FLEXSTEEL" ARMORED CONDUCTORS

"Flexsteel" Armored Conductors

"Flexsteel" Armored Conductors

"Flexsteel" armored conductors are designed for severe service and are built electrically and mechanically to meet these demands. The flat surface is a distinctive feature of "flexsteel" material. The flexible lead covered armored conductors are moisture proof and will give satisfactory results when installed in moist places, such as packing plants, cold storage buildings, breweries, etc., and are also adaptable for underground work.

FLEXIBLE STEEL-ARMORED CONDUCTORS

Sprague Conductor Type BX

Sprague Flexible Steel-Armored Conductors

Sprague Flexible Steel-Armored Conductors, or to use the more widely known trade name, BX Cables, are covered by broad fundamental patents, and while adapted to new building construction, yet they find special favor on account of the ease with which they can be installed in finished buildings without defacing walls or decorations.

The value of these products for a safe and economical wiring system is attested by their continued use in many classes of interior construction, whether fireproof or non-fireproof.

There are armored cables on the market having various designs of armor construction; some are furnished with and some without gaskets for moisture protection. BX is of that simple shaping which prevents the wearing away of the zinc coating in the process of manufacture, and with the gasket placed between the inner and outer strips for moisture protection.

The armor is composed of convex and concave hot galvanized metal strips wound spirally upon each other and over the insulated conductors. A gasket saturated with moisture repellent is placed between the inner and outer metal strips, thus further rendering the conductor moisture-proof.

Sprague Steel-Armored Flexible Cord

Sprague Steel-Armored Flexible Cord for lamp pendants and portables is particularly desirable for use under all conditions requiring extraordinary service. In such places as machine shops, theatres, mills, show windows, factories, engine and boiler rooms, these materials are almost indispensable. Where ordinary "cord" is frequently useless under rigorous conditions of service, Steel-Armored Flexible Cord will invariably meet the requirements.

Conduit and Wiring Accessories

GREENFIELD HOT GALVANIZED FLEXIBLE STEEL CONDUIT

A Coil of Single Strip Type of
Greenfield Flexible Steel Conduit

A Coil of Double Strip Type of
Greenfield Flexible Steel Conduit

Single Strip Type

This conduit is designed particularly for fireproof construction, but is equally adaptable to new non-fireproof work, or for the wiring of finished buildings.

It differs from the Double Strip Type in that it is formed with a single strip of galvanized steel, interlocked and gasketed in such a manner as to be highly suitable for concrete construction.

There is practically no waste when this conduit is used, all short pieces left over can be clamped together by means of couplings.

In ordering Single Strip Type always specify S. S. Type.

Data and List Prices

580396	2 $\frac{1}{2}$	3.	306	25	49.40

Double Strip Type

Double Strip Type of flexible steel conduit is constructed of concave and convex steel strips spirally wound upon each other in such a manner as to interlock their concave surfaces. Thus the convex surfaces of the two strips form respectively the outer and inner surfaces of the conduit. This construction insures a smooth interior surface, thus reducing the possibility of friction in the drawing in of the conductors. A gasket is provided between the inner and outer strips, rendering the conduit moisture proof.

Where it is desired to make use of a conduit in existing buildings, we strongly recommend this Double Strip Type on account of its extreme flexibility.

With a flexibility as great as new manila rope of equal diameter elbows are unnecessary, as it can be readily bent around corners and over beams. It can be fished and drawn into floors and walls without injuring trim or decorations.

There is practically no waste when this conduit is used. All short pieces left over can be clamped together by means of couplings.

In ordering Double Strip Type of conduit always specify D. S. Type.

Conduit and Wiring Accessories

FLEXIBLE CONDUIT FITTINGS

Fish Plug

Watertight Stuffing Bushing

Fish Plugs

These fish plugs, which are made for $\frac{3}{8}$ inch, $\frac{1}{2}$ inch and $\frac{3}{4}$ inch Greenfield Conduit, will be furnished free on application, and will be found very useful in drawing in either D. S. or S. S. Type of conduit in finished buildings where it is desired to fish it under floors or in partitions.

After the conduit has been cut squarely off in the special vise, the fish plug may be screwed into the tube and the fish wire or drawing-in line should then be attached to the eyelet on the end of the plug.

Watertight Stuffing Bushings

These bushings are made in two parts consisting of a male nipple having one end drilled out in a cup shape, and a hexagonal female clamping nipple having a clamp on one end which when screwed together securely holds the cable. The cable is inserted into the clamping nipple and the steam packing is then wrapped around the lead covering of the conductors. The male nipple is then screwed into the female clamping nipple which forces the steam packing into the cup-shaped space, also against the shoulder in the bottom of female clamping nipple making an absolutely watertight joint in the bushing.

Insulated Brass Connectors

For Steel Armored Flexible Cord Type "E"

These connectors are for use with Steel-Armored Flexible Cord as they thoroughly insulate the armor of the cord from the boxes and covers, also from the shell of the socket. They may be used in connection with box covers, sockets, rosettes, plug receptacles and attachment plugs.

SWITCH BOXES

"Union" Sectional Switch Boxes

"Union" Sectional Switch Boxes are equipped with reversible and sliding ears, so as to be adapted to plastered or unplastered walls for old or new installation in buildings. All single boxes are furnished with one side removable which obviates the necessity of carrying gang boxes assembled in stock. By removing one side of the box, spacers can be inserted and the boxes built up to any desired number of gangs. The screw centers for attaching switches and flush receptacles are standard and accommodate all standard makes of push button flush and rotary flush switches and flush plug receptacles. These boxes are furnished with three styles of ears, "C," "F" and "SF," as illustrated below. Unless otherwise specified, style "C" ears are regularly furnished.

DOOR SWITCH BOXES

For Non-Metallic Flexible, Metallic Flexible and Rigid Iron Conduit.
Square Corners

These boxes are made in six types, D.S. No. 1, D.S. No. 2, D.S. No. 3, D.S. No. 4, D.S. No. 5 and D.S. No. 6. D.S. No. 1, D.S. No. 3 and D.S. No. 5 are made for loom or rigid conduit. Two $\frac{1}{2}$ inch knockouts are provided for flexible, non-metallic conduit, and a knockout in one end for rigid $\frac{1}{2}$ inch conduit. D.S. No. 2, D.S. No. 4 and D.S. No. 6 are made for flexible metallic and rigid conduit, having two holes $\frac{3}{8}$ inch in diameter, arranged with clamps for securely fastening the flexible conduit. A knockout for $\frac{1}{2}$ inch conduit is also furnished.

D.S. No. 1 and D.S. No. 2 have switch screws on $\frac{3}{8}$ inch centers and will accommodate Perkins, Arrow E or C-H switches. D.S. No. 3 and D.S. No. 4 have switch screws on $\frac{3}{8}$ inch centers and are designed for Diamond H switches. D.S. No. 5 and D.S. No. 6 have switch screws on $\frac{3}{8}$ inch centers and are designed for H & H switches.

"Union" Sectional Conduit Switch Boxes

FOR FLEXIBLE OR RIGID CONDUIT

No. 155

No. 160

No. 160 Spacer

Single Plate Cover

2 Gang Plate Cover

DEEP TYPE

For Push Button, Rotary Flush Rectangular Base Switches and Receptacles

This type box is made in two styles, No. 155 single gang, and No. 160 two gang. Style No. 155 has room for making splices, taps and junctions. Either of the small top covered plates may be removed by loosening the screws, thus permitting access to the wires without disturbing switch. A spacer is provided which may be used in connection with type No. 160 to build up a gang box of any desired capacity. Conduit openings for either $\frac{1}{2}$ or $\frac{3}{4}$ inch are provided in each of the four sides of these boxes. Spacers have but one outlet in each end and can be inserted without removing screws. By equipping above boxes with flat steel covers a junction or cut-out box is provided, which will accommodate single and double main line cut-outs.

No. 170 2 Gang

No. 170 Spacer

SHALLOW TYPE

For All Makes of Shallow Switches

No. 170 sectional combination loom and conduit box is particularly adapted for thin partitions and outside wall work and will accommodate all makes of shallow switches. It is $1\frac{1}{4}$ inches in depth. End and bottom outlets are provided for $\frac{1}{2}$ inch conduit. Two outlets on either side take loom or $\frac{1}{2}$ inch flexible conduit. Spacers are provided by means of which two gang boxes may be built up to accommodate any number of switches desired. Boxes are made in two types, No. 170 without ears, and No. 170A with ears. No. 170 spacer cannot be furnished with ears. Boxes may be used as junction boxes with flat steel covers illustrated at top of page.

List No.	Description	Dimensions			Unit Pkg.	No. per Can	Wt. per 100	List Price Each

For sherardized boxes, add 5%.

SWITCH BOXES

Gem Box Type E

Gem Box Type B
"Gem" Sectional Switch Boxes

The "Gem" Sectional Switch Box is for use with non-metallic, flexible and rigid conduit. They take all makes of push button and rectangular base switches and receptacles. The assembling can be done quickly by the use of no other tool than the screw driver. It is impossible to put the box together in any way except the right way, as all sides are interchangeable.

Construction. One of the fastenings consists of a lug, which carries a screw into a notch. When the screw is tightened the two parts are held firmly together and the projecting arm of the hook interlocks with the side. The other fastening consists of a bent lug which, when seated, fits into a pocket in the adjacent edge of the side piece, interlocking securely and rigidly together. The "Gem" box is regularly furnished with type "C" ear, reversible, having an adjustment from $\frac{1}{2}$ inch to $\frac{3}{4}$ inch. Ear extends $\frac{1}{2}$ inch from body of box and affords ample room for setting screws firmly into lath or mounting board. The D and E are designed particularly for the rewiring of old buildings. The level corners permit insertion into the smallest practical opening in the walls and make the "fishing" of the ends of flexible conduit into the box very easy. The type B, $2\frac{3}{4}$ inches deep, is designed for switch and receptacle casings in concealed conduit or armored cable work—takes $\frac{1}{2}$ inch and $\frac{3}{4}$ inch conduit and may be used where a larger flexible tubing than $\frac{1}{2}$ inch is desired.

"H & H" WALL CASES

No. 901

No. 901

Showing Ears Reversed

No. 902

No. 912

Wall Cases

The ears used in mounting the wall cases are reversible, as shown in the illustration, and the wall cases can be set flush in the walls that have already been plastered, or they can be mounted on the laths in walls not yet plastered, and in this latter case the ears have to be reversed. When specified, wall cases will be shipped with ears reversed.

There are two screw slots in the ears so that in "new work" the wall case can be adjusted for the proposed thickness of the plaster.

Knockout outlets for non-metallic flexible conduit are provided as follows: Four outlets in the bottom for $\frac{3}{4}$ inch conduit, two at each end for $\frac{1}{4}$ inch conduit.

All "H & H" wall cases are made in two depths of $2\frac{1}{4}$ inches, and $2\frac{3}{4}$ inches, and can be furnished in horizontal or tandem gangs.

SHALLOW WALL CASES

Schedule "H"

List No.		Style	Dimensions Inches	Std. Pkg.	Pkg. Lbs.	Wt. Each	List Price
901	For One Switch.....	Horizontal	2 x 3 x $2\frac{1}{4}$	*	74		\$0.35

CUTTER STEEL BOXES

Service and Cut-Out

Schedule "O"

These boxes are made of sheet steel with sides formed up and welded together. There are three $\frac{1}{2}$ inch knock-outs in each end. The sides have knock-outs for $\frac{1}{2}$ inch conduit spaced $\frac{1}{2}$ inch apart.

The edges of the door are turned in, making them practically dust proof and weatherproof. There are four $\frac{1}{4}$ inch holes for mounting 1 inch from each corner.

Underwriters' inspection requires boxes of No. 16 U. S. gauge steel for surfaces up to 360 square inches. Any one dimension must not exceed 24 inches. Boxes of No. 14 U. S. gauge steel shall not exceed 1200 square inches in area for any surface or 54 inches for any dimension. Boxes which exceed 1200 square inches for any surface or 54 inches for any dimension are to be made of No. 12 U. S. gauge steel, or heavier.

No. 16 U. S. G. No one dimension to exceed 24 inches. No one surface to exceed 360 square inches.
*List Prices Each in lots of 10 boxes of same size and kind. (Broken lots extra.) Stock sizes are listed in bold face type.

*List Each

Brass Commode Catch.....	\$0.40
Nickel Plated Vault Handle.....	1.00
Yale Cylinder Lever Lock.....	.70
Master Keyed Cylinder Lever Locks.....	1.00
Master Keys.....	.75

For Flush Mounted Boxes, add 50% to list of Surface Type Box.

For Weather proof Boxes with overhanging and sloping roof, add to list of Surface Type Box 50%.

For Galvanized Boxes double Enamel Box list.

Pull or Junction Boxes with covers take the same list prices as Surface Type Boxes.

Deduct 20% for omission of doors on Surface Type Boxes.

For Spring Hinges on doors, add \$0.60 list per pair.

Knock-outs

Standard Knock-outs 1/4 inch diameter for 1/2 inch conduit pipes will be furnished on all stock boxes, unless otherwise ordered. Boxes made to order will be furnished with one set of Knock-outs either for loom, federal bushings or conduit pipes without extra charge. All Knock-outs in the same box to be alike. Knock-outs of different sizes will be furnished when ordered at an extra charge of \$1.00 list per box. This charge covers an assorted number of Knock-outs of any standard size in each box for top, bottom and sides. Knock-outs for main feeder pipes, top and bottom when required other than standard will be furnished extra at a list price of 10 cents each. All boxes are furnished regularly with the same size of Knock-out, top, bottom and sides. In ordering special boxes, advise size and location of Knock-outs and furnish sketch with order so as to avoid errors and possible delay.

"SECURITY" STEEL BOXES

NATIONAL ELECTRICAL CODE STANDARD

Square Bottom Surface Type

Surface Type Square Bottom**NO. 16 GAUGE METAL, PLAIN-HINGED DOOR****Latest Underwriters' Requirements**

In steel cabinets having an area of less than 360 square inches for any surface, or having a single dimension less than 2 feet, sheet metal must be used at least equal to No. 16 U. S. sheet metal gauge. In those having an area greater than 360 square inches, and not over 1,200 square inches, the sheet metal must be at least equal to No. 14 U. S. sheet metal gauge, and in those having an area greater than 1,200 square inches the sheet metal must be at least equal to No. 12 U. S. sheet metal gauge.

Orders will be filled in accordance with above requirements unless otherwise instructed.

Side Hinges

Unless otherwise specified all boxes are hinged on the long side and usually the wireman can turn them to swing either side or up or down. The door regularly swings from left to right. If specified will be hinged any other way without extra charge.

Dimensions and List Prices

A standard package contains 10 boxes of one size and kind.

Extra Charges

Plain weatherproof boxes with overhanging and slanting roof, add to list of surface type 50%. Galvanized take three times the surface list.

Galvanized boxes take twice the list of surface type.

Knock-outs for 1/2 inch conduit, spaced 1 1/2 inches center to center, are regular.

For each variation from 1/2 inch a net charge of 35 cents is made. This covers any number of knockouts of size specified in any number of boxes.

Plain cupboard locks, add net 15 cents.

Thirty degree slanting bottoms for surface type boxes 4 inches deep, 4 inches to 10 inches wide, add to list 15 cents; 12 inches to 15 inches wide, add 20 cents; 16 inches to 24 inches wide, 25 cents.

Standard Packages

10 boxes of a size and kind constitute a standard package.

WEIGHT

Estimate the area in square feet of the steel and multiply by the weight below:

No. 16 U. S. Gauge, 2.5 lbs. per square foot. No. 14 U. S. Gauge, 3.13 lbs. per square foot. No. 12 U. S. Gauge, 4.38 lbs. per square foot.

Underwriters' Requirements

Demand the use of No. 14 gauge metal in steel cabinets having an area of 360 square inches and less than 1200 square inches. On all boxes having an area greater than 1200 square inches No. 12 U. S. Gauge metal is required.

Unless otherwise advised, all boxes are hinged on long side.

How to Order

With 10 amp. 250 volts
Receptacle and Plug

Adjustable Floor Boxes

Patterson Adjustable Floor Boxes Nos. 4000, 4000B and 4000BN are made for cement and granolithic type floor work.

Universal steel template permits mounting in box, without additional drilling or tapping, the following receptacles: Diamond H, Bryant, Chapman, Arrow E, Pringle, H. & H. Krantz, Hubbell and Mesco; thus giving a range of from 10 to 25 amperes, 250 volts. The plate has permanent outer bronze edge which can be cemented into floor and a removable inside plate, giving easy access to the box at all times without disturbing cemented edge of plate. Regularly tapped for four $\frac{1}{2}$ inch conduit entrances in sides, and one in bottom. When specially ordered, furnished with any arrangement of conduit entrances desired.

With wooden plug furnished with each box, lower sections when set in floor during roughing may be "plugged up" and kept clear of dirt; when cement or granolithic flooring is put down, it will harden around this circular wooden plug and as plug is exact size of bronze face plate, a clean circular hole will be ready for bronze surface plate to snugly fit in when, at time of finishing, wood plug is split out with chisel.

In Patterson Adjustable Floor Boxes, the vertical up-and-down adjustment of 1 inch is ample for any variation of floor level and side or off-level adjustment of $\frac{3}{8}$ inch, makes possible the perfect flushing of plate with surface of floor. The box is universal, giving any combination of conduit entrances. Every possible connection to lighting circuits without additional machine work can be made. as follows:—

- (a) By portable cord through dome-cap with rubber bushing.
- (b) By $\frac{3}{8}$ inch brass tubing into dome-cap when bushing is removed.
- (c) By $\frac{1}{2}$ inch conduit into flush disc when removable plug is taken out.

Non-Adjustable Floor Boxes

All Patterson Floor Boxes shown on this page are double gasketed throughout, thoroughly waterproof; all parts except floor box itself are heavy cast bronze; the box itself is galvanized iron.

In Nos. 3000 and 3000A standard 10 ampere receptacles are provided with brass covered plugs. With other floor boxes on this page, no receptacles or plugs are furnished.

Iron floor boxes are regularly drilled and tapped for four $\frac{1}{2}$ inch conduit entrances, two in sides and two in bottom, adapting them to flexible or rigid conduit work without extra drilling. They will be furnished when specially ordered with any arrangement of conduit entrances. Removable plugs are furnished closing all but one outlet.

Cardboard shims are furnished with each box and with these shims bronze plate can be easily brought flush with the floor without taking extreme care in cutting; the setting of a Patterson Floor Box is thus made quicker and easier than any floor box on the market.

Receptacles may be removed from box for easy wiring by simply loosening two screws.

Rubber gasket fits into "under-cut" of bronze plate, so that it does not easily fall out.

Hard rubber bushing in dome cap is sunk flush, overcoming entirely the annoyance of breakage, so universally experienced in other floor boxes.

All Patterson Floor Boxes may be set with an expansion bit, guaranteeing rapid work.

Boxes with letter "A" in the model number differ from those without, only in the size of the plate, which is in the "A" box $\frac{3}{8}$ inch larger diameter—easier to cut in because of flange extending over edge of box.

FLOOR BOX WITH DOME FITTINGS AND FLUSH DISCS With Receptacles and Plugs

List No.	Diameter Ins. Bronze Plate	Depth Ins. Over All	Std. Pkg.	Wt. Lbs. Std. Pkg.	*List Price Each

FIELDING RECEPTACLES AND PLUGS

NATIONAL CODE STANDARD

No. 1505

No. 1500T

Sectional Mica Pockets

50 Amperes, 250 Volts

Fielding Receptacle Plugs are made of dry mica discs, without shellac or other similar substances, threaded on a steel mandrel, placed under heavy pressure and then turned down with a diamond tool. Polarity cannot be reversed, yet by parallel-band construction, a round and quickly entered plug is retained, rated at 50 amperes, but will not heat at 200 amperes; waterproof, fireproof, absolutely indestructible. Aluminum plug handle has bronze locking collar, firmly gripping by a rubber gasket the surface of cable, no knot necessary to tie, but positively secured against any strain coming on the terminal connections. Duplex closing covers operated by a patented device, giving independent control of the covers, make quick plugging possible with no danger of mashing the fingers from entering plug. Simple lifting of the ring inside of plate raises both covers—letting go, gravity drops them flush with the floor.

Flush Floor Type

List No.		Size Plate Inches	Depth Inches	*List Price Each
1505	Stage pocket and plug complete.....	9x9	8 1/4	\$48.00

1505R	Pocket only.....	9x9	8 1/4	24.00

Two gang only 4 inches wider than one gang.

Side Wall Receptacles and Plugs

50 Amperes, 250 Volts

Fielding Receptacles Nos. 1500T and 1500B are designed for work where the receptacle is to be attached to side wall or iron column, switchboard panel, etc. They have all the points of superiority noted above in detail, and have been adopted as a standard by many railroads for storage battery charging panels. They are also used on garage switchboards of up-to-date design. Furnished with brass plate in place of heavy iron plate if desired. Size of brass plate can be as low as 5 1/2 inches square. Depth from surface of plate to back of porcelain, 4 1/4 inches.

FULLMAN FLOOR OUTLETS

No. 400, 413 and 465

No. 421 With 466 Bell Nozzle

Adjustable Watertight Floor Boxes

The covers of Fullman floor boxes always align automatically with the finished floor. They also provide for vertical adjustment of cover up to 2½ inches. The elasticity of adjustment together with watertight features are secured by the exclusive design of ring which fits the groove. The covers of 4¼ inch and 4¾ inch outlets are furnished with ½ inch or 2 inch flush plugs, as desired. Bell nozzles and 2 inch plugs adapt outlets for porcelain receptacles and plugs. The box bodies of 4¼ inch and 4¾ inch outlets are drilled and tapped with four ½ inch conduit holes, three of which are closed with slotted steel screw plugs.

SUSPENSION HANGERS

Hanger Used Alone

Porcelain Bushing Used with Hanger

Minerallac Cable and Conduit Hangers

These hangers are made of the best spring steel and are much stronger than cast iron hangers for the same purpose. They are easily and quickly put in place enabling great rapidity in running open wiring, conduit and cable. They are especially adapted for tile and beam work, as it is necessary to drill but one hole in surface wired over. These hangers are approved by the Underwriters' National Electric Association.

GROUND CLAMPS

No. V-2

No. 3

Vogel Ground Clamp

This ground clamp is adjustable to different sized pipes and cables from $\frac{1}{2}$ inch to 2 inches. It has no set screw to puncture lead pipe or cable; the band is of copper, heavily tinned. Clamping body, bolts and nuts are of heavy brass. This clamp remains tight under expansion or contraction of the pipe, the spring tension of the clamping piece does the trick; will safely carry 300 amperes.

List No.	List Price Each
V-2 Vogel Ground Clamp	\$0.11 $\frac{1}{4}$

Blackburn Nos. 3 and 4 Ground Clamps

These clamps are very simple in construction, being composed of a flexible perforated copper band to encircle the pipe and a removable copper lug with a boss raised on the flat that fits into perforations in the band and through which is threaded the tightening screw with lock nut. These clamps are for use on power and lighting circuits. They fit pipe cable or flexible conduit.

No. 0

No. A-1

Blackburn Adjustable Ground Clamps

These clamps are approved for telephone circuits. They can be attached without disengaging any of its parts. The screw draws the band tightly against the pipe, at the same time chafes the surface of the pipe, thereby securing a good electrical contact. This connection is quicker made and much better than the average soldered joints.

SHAWMUT GROUND CLAMP

These Clamps are made for use on 3/8 inch to 3 inch pipe, and are so constructed as to give the maximum strength with a minimum amount of metal, thus reducing cost. The Clamps will hold No. 4 Ground Wire.

NEW YORK GROUND CLAMP

These Ground Clamps are made in three types, A, B, and D. Type A clamps are for connecting telephone and telegraph ground wires to pipes or cables. Type B clamps are for making ground connections for electric light wires without the use of solder. Binding posts provide connections for No. 2 and No. 4 B. & S. wires. Type D for electric light and motor work.

Jiffy Bushing Connector

No. 2 and 4
Universal BushingNo. 911
Conduit Clamp

Jiffy Bushing Connectors

The Jiffy Bushing Connector is an absolutely new and original device for connecting metallic flexible conductors, sizes No. 14-2 wire, No. 14-3 wire, No. 12-2 wire. This bushing fits any round or straight edge box and always leaves a neat outside appearance. No inside locknut to adjust. The locking and grounding fingers are tempered and absolutely rust proof, giving not only a positive but a permanent ground jiffy, while its construction of a combination locknut and spring washer working on a saw-tooth thread gives the tightness and secureness demanded by inspectors and cannot work loose from vibration.

	List Price Each

UNIVERSAL INSULATOR SUPPORTS

Fig. 1

Fig. 2

Fig. 3

Fig. 4

Fig. 5

Clamping Supports

These supports are made in four sizes (as shown in figure 1) to take all sizes of porcelain and glass insulators. They are made of the best grade malleable iron and specially designed for securing insulators to open steel framework (as shown in figure 2) for wiring mills, foundries, factories, piers, elevated railroads and similar structures. They are easily attached in any position to beams, angles, plates, bars, tanks, pipes, etc., and by their use electric wiring for lights, motors, generators, etc., can be installed with a great saving of labor and material. These supports eliminate the necessity of designing and making forgings, hook bolts, straps and other special rigging. They do away with wood blocks or strips, thus avoiding shrinkage troubles, loose construction sagging wire and danger from fire. Changes in wiring can be made without loss or extra cost by simply moving supports to new location. The strength of the steel framework is not impaired due to the fact that there is no drilling of holes. Two insulators can be fastened to each support when desired (as shown in figure 3). These supports are a quick and reliable means of securing all kinds of porcelain and glass insulators to exposed steel framework. Figure 4 shows 2 inch and 1½ inch supports with insulators applied to angle iron. They can be used in any position on the flanges of any standard rolled steel structural shape such as channel, Z bars, round, square and flat bars, also gas and water pipes, etc.

Important Information Concerning Condulet Bodies Listed on This Page

Obround covers and Obround Conduletto fittings of same size are interchangeable on above Condulet bodies of corresponding size, except that type BE Condulet bodies take Obround covers only.

Proper fastening screws are furnished with Obround covers and Obround Conduletto fittings and are so held in screw holes that they can not fall out.

Finishes: Black enamel is the standard finish for Condulet bodies, and will be furnished unless another finish is specified on the order. Galvanized finish on exterior and black enamel finish on interior of Condulet bodies will be furnished, at same price as all black enamel finish, when the order specifies galvanized finish. For special plated finishes, see page 182. For cast brass and cast bronze Condulet bodies, plain and with special finishes, see page 182. For aluminum Condulet bodies, plain and with black enamel finish, see page 182.

Black enameled and galvanized Condulet bodies of the same type and size may be assorted to make up a standard package. No other assortment is allowed.

Obround covers are listed on pages 30, 31 and 32. Obround Conduletto fittings are listed on pages 184 and 185. Obround gaskets are listed on page 176. Condulet reducers are listed on page 171. Condulet bodies with Obround openings are listed on pages 21 to 29a, inclusive, and on page 161.

Important Information Concerning Condulet Bodies Listed on This Page

Obround covers and Obround Conduletto fittings of same size are interchangeable on above Condulet bodies of corresponding size.

Proper fastening screws are furnished with Obround covers and Obround Conduletto fittings, and are so held in screw holes that they can not fall out.

Finishes: Black enamel is the standard finish for Condulet bodies, and will be furnished unless another finish is specified on the order. Galvanized finish on exterior and black enamel finish on interior of Condulet bodies will be furnished, at same price as all black enamel finish, when the order specifies galvanized finish. For special plated finishes, see page 182.

For cast brass and cast bronze Condulet bodies, plain and with special finishes, see page 182. For aluminum Condulet bodies, plain and with black enamel finish, see page 182.

Black enameled and galvanized Condulet bodies of the same type and size may be assorted to make up a standard package. No other assortment is allowed.

Obround covers are listed on pages 30, 31 and 32. Obround Conduletto fittings are listed on page 185.

Obround gaskets are listed on page 176. Condulet reducers are listed on page 171.

Condulet bodies with Obround openings are listed on pages 21 to 29a, inclusive.

Important Information Concerning Condulet Bodies Listed on This Page

The size of cover required for type T Condulet body is the same size as the conduit hubs at the ends of the cover opening.

Obound covers and Obound Conduletto fittings of same size are interchangeable on above Condulet bodies of corresponding size.

Proper fastening screws are furnished with Obound covers and Obound Conduletto fittings, and are so held in screw holes that they can not fall out.

For finishes, see page 26.

Black enameled and galvanized Condulet bodies of the same type and with the same size cover openings may be assorted to make a standard package. No other assortment is allowed. * $\frac{1}{2}$, $\frac{3}{4}$ and 1-inch types T, TB and X Condulet bodies are regularly furnished with larger wiring chamber than other Obound Condulet bodies of corresponding size. These Condulet bodies will be furnished with wiring chamber of the same size as other Obound Condulet bodies, if specifically ordered, using regular catalogue numbers and specifying "Smaller Wiring Chamber."

Obound covers are listed on pages 30, 31 and 32. Obound Conduletto fittings are listed on page 185.

Obound gaskets are listed on page 176. Condulet reducers are listed on page 171.

Condulet bodies with Obound openings are listed on pages 21 to 29a, inclusive.

†Standard and special 1-wire hole covers differ only in diameter of wire hole; see schedule on page 172. Standard 1-wire hole covers will always be furnished, unless order specifically calls for special 1-wire hole covers.

Obround covers are interchangeable on corresponding sizes of Condulet bodies with Obround openings. 2 1/2 and 3-inch Obround covers are interchangeable. 3 1/2 and 4-inch Obround covers are interchangeable.

Above composition Obround covers of the same size may be assorted to make up a standard package, regardless of style of cover.

Assortment specified on page 32 applies to above Obround porcelain covers 191, 291 and 391. Standard package discount is allowed on covers when an order is for a standard package of Condulet bodies and an equal number of covers for those bodies; but on an order for covers alone, standard package discount is allowed, only, on the specified standard package quantity of covers.

*For diameter of wire holes in covers, see page 172.

Obround gaskets are listed on page 176. Condulet bodies that take Obround covers are listed on pages 21 to 29a, inclusive.

Obround covers are interchangeable on corresponding sizes of Condulet bodies with Obround openings. 2 1/2 and 3-inch Obround covers are interchangeable. 3 1/2 and 4-inch Obround covers are interchangeable.

Proper fastening screws are furnished with covers, and are so held in screw holes that they can not fall out.

Finishes: Black enamel is the standard finish for metal covers, and will be furnished unless another finish is specified on the order. Galvanized finish will be furnished, if specifically ordered, at same price as black enamel finish. For special plated finishes see page 182. For brass and bronze covers, plain and with special finishes, see page 182. For aluminum covers, plain and with black enamel finish, see page 182.

Black enameled, galvanized and porcelain Obround covers of the same size may be assorted to make up a standard package, regardless of style of cover. No other assortment is allowed. Standard package discount is allowed on covers when an order is for a standard package of Condulet bodies and an equal number of covers for those bodies; but on an order for covers alone, standard package discount is allowed, only, on the specified standard package quantity of covers.

Obround gaskets are listed on page 176. Condulet bodies that take Obround covers are listed on pages 21 to 29a, inclusive.

CROUSE-HINDS FITTINGS FOR OBROUND CONDULET BODIES

For Types A, B, C, CO, D, E, LB, LBA, LBB, LBL, LBV, LF, LFB, LFM, LL, LLB, LR, LRB, LU, T, TB, TL, TR, U, UB, and X Condulet Bodies

Obround Conduleto Fittings are listed on page 185, and are as follows: Receptacle with Shade Holder Groove, Receptacle without Shade Holder Groove, Cord Rosette, Fixture Rosette with 1-8 Male Nipple, Fixture Rosette with 1-8 Female Nipple, Hubbell Attachment Plug Receptacle and Hubbell Polarity Plug Receptacle

Type C Condulet Body
And Obround Conduleto Receptacle with Shade Holder Groove
(Exploded View)

Type C Condulet Body
And Obround Conduleto Hubbell Attachment Plug Receptacle
(Exploded View)

CONDULET BODY EXTENSIONS

For Condulet Bodies with Obround Openings, Except Types BE, F, FE, DF and TM

Take Obround Covers and Obround Conduleto Fittings

Furnished with Mat (White Enameled) and Necessary Fastening Screws

Condulet Body Extension Mat

Condulet body extensions deepen the wiring chamber of Obround Condulet bodies and bring the cover opening flush with the plaster line.

An Obround Condulet cover or an Obround Conduleto fitting is fastened direct to the Condulet body extension.

The mat serves as a finish and is held in position by the fastening screws of the Condulet cover or Conduleto fitting.

Finishes: Black enamel is the standard finish for Condulet body extensions, and will be furnished unless another finish is specified on the order. Galvanized finish on exterior and black enamel finish on interior of Condulet body extensions will be furnished, at same price as all black enamel finish, when the order specifies galvanized finish. For special plated finishes, see page 182. For cast brass and cast bronze Condulet body extensions, plain and with special finishes, see page 182. For aluminum Condulet body extensions, plain and with black enamel finish, see page 182.

Black enameled and galvanized Condulet body extensions of the same size may be assorted to make up a standard package. No other assortment is allowed.

Obround covers are listed on pages 30, 31 and 32. Obround Conduleto fittings are listed on page 185. Obround gaskets are listed on page 176. Condulet bodies that take above Condulet body extensions are listed on pages 21 to 29a, inclusive.

(Cross Reference Page 32a)

OTHER MANUFACTURERS' FITTINGS FOR OBROUND
CONDULET BODIES

The Arrow Electric Company, Bryant Electric Company, General Electric Company, Hart & Hegeman Manufacturing Company, Pass & Seymour, and the Perkins Electric Switch Manufacturing Company each make a special base for mounting fittings of their own manufacture on any 1/2-inch Obround Condulet Body.

Below are shown a few of these fittings and an exploded view illustrating the way they are mounted on Condulet bodies.

We also furnish fittings of manufacture other than Crouse-Hinds. One-half-inch Obround Condulet bodies take the following:

Snap Switches: ARROW E. BRYANT—New Wrinkle, G. E. CO. HART & HEGEMAN. PERKINS—New Wrinkle.

Switch Rosettes: ARROW E—Arrow Forty and Arrow Twenty. BRYANT—New Wrinkle. PASS & SEYMOUR—Fluto.

Sockets and Receptacles: ARROW E—Arrow Forty and Arrow Twenty. BRYANT—New Wrinkle. G. E. CO.—Fluted Catch. PASS & SEYMOUR—Fluto. PERKINS—New Wrinkle.

Important Information Concerning Covers Listed on This and the Opposite Page

Proper fastening screws are furnished with covers, and are so held in screw holes that they can not fall out.

Finishes: Black enamel is the standard finish for metal covers, and will be furnished unless another finish is specified on the order. Galvanized finish will be furnished, if specifically ordered, at the same price as black enamel finish. For special plated finishes, see page 182.

For brass and bronze covers, plain and with special finishes, see page 182.

White enamel finish will be furnished on metal covers, if specifically ordered, at 50% increase over list price of black enamel finish.

All black enameled, galvanized and porcelain covers, listed on this and the opposite page, may be assorted to make up a standard package.

Condulet bodies that take above covers are listed on pages 35, 36, 37, 39, 40, 41 and 55.

Listings of covers are continued on page 47.

Important Information Concerning Covers Listed on This Page

Proper fastening screws are furnished with covers, and are so held in screw holes that they can not fall out.

Finishes: Black enamel is the standard finish for metal covers, and will be furnished unless another finish is specified on the order. Galvanized finish will be furnished, if specifically ordered, at same price as black enamel finish. For special plated finishes, see page 182. For brass and bronze covers, plain and with special finishes, see page 182. For aluminum covers, plain and with black enamel finish, see page 182.

All black enameled and galvanized covers for Four-Gang FS series of Condulet bodies may be assorted to make up a standard package regardless of style of cover. No other assortment of covers only is allowed.

Standard package discount is allowed on covers when an order is for a standard package of Condulet bodies and an equal number of covers for those bodies. This note also applies to covers listed on pages 46, 47, and 48.

White enamel finish will be furnished on metal covers, if specifically ordered, at 50% increase over list price of black enamel finish.

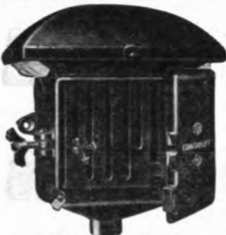

Condulet bodies that take above covers are listed on page 45.

Important Information Concerning Condulets Listed on This Page.

The adjustable bars and adapting rings furnished with each Condulet permit the proper mounting of any switch or Form 5 or Form 10, (or in case of type FHF Condulet, any Form 30) attachment plug receptacle enumerated on page 62 or 63.

The universal cut-out fastening plate, furnished with each type FHF Condulet, takes any of the following 2-wire, 30 ampere, 250 volt cartridge, or 2-wire, 30 ampere, 125 volt, plug fuse cut-outs:

BRYANT—(Cartridge) 1917, (Plug) 62965. D. & W.—(Cartridge) 91102. G. E. CO.—(Cartridge) 34367, (Plug) 62965. NOARK—(Cartridge) 3327. FAISTE—(Cartridge) 72965, (Plug) 2965. SHAWMUT—(Cartridge) 2077. TRUMBULL—(Cartridge) 29653, (Plug) 2965. WEBER—(Plug) 62965. UNION—(Cartridge) 2010.

Type FHF Condulets are designed to take style H (bulb 89) lamp.

Type FH Condulet bodies take covers DS7, DS8, DS9, DS10, DS11 and DS12, listed on page 46. Receptacle CS37G is listed separately on page 190. Condulet reducers are listed on page 171.

For finishes and assortments, see note on page 57.

(Cross Reference Page 55)

CONDULET BODIES—G AND H SERIES

TYPES G AND GA

**Take Round Covers; 5, 10 or 20 Ampere Round Base Switches,
or Round Base Fittings**

Furnished with Adjustable Bar and all necessary Fastening Screws

Type G
Showing Snap Switch Mounted
(Broken-away View Illustrating use of Adjustable Bar
in Fastening Fitting or Cover to a Condulet Body
of the G and H Series)

Condulet bodies of the G and H series are so designed that covers, switches or fittings are fastened to them by means of an adjustable bar and two screws. The adjustable bar permits switch or fitting to be mounted in any desired position.

A gasket may be used between cover or fitting and Condulet body.

Gaskets are not furnished with Condulet bodies, and if desired must be ordered separately.

Form 5, Form 10 and Form 20 are designations to indicate sizes of Condulet bodies which take fittings correspondingly classified on pages 62 and 63. The dimensions of these Condulet bodies are scheduled on page 56.

Important Information Concerning Condulet Bodies Listed on This Page

Finishes: Black enamel is the standard finish for Condulet bodies, and will be furnished unless another finish is specified on the order. Galvanized finish on exterior and black enamel finish on interior of Condulet bodies will be furnished, at same price as all black enamel finish, when the order specifies galvanized finish. For special plated finishes, see page 182. For cast brass and cast bronze Condulet bodies, plain and with special finishes, see page 182. For aluminum Condulet bodies, plain and with black enamel finish, see page 182.

Black enameled and galvanized Condulet bodies of the same type, size and form may be assorted to make up a standard package. No other assortment is allowed.

We will furnish switches or fittings for above Condulet bodies, and enumerate them on pages 62 and 63.

Gaskets are listed on page 176. Condulet reducers are listed on page 171.

Covers for Condulet bodies of the G and H series are listed on page 61.

Condulet bodies of the G and H series are listed on pages 57 to 60, inclusive.

The same covers fit both Form 5 and Form 10 Condulet bodies, and these covers are interchangeable on any Form 5 or Form 10 Condulet body of the G and H series.

Covers for Form 20 Condulet bodies are interchangeable on any Form 20 Condulet body of the G and H series.

Proper fastening screws are furnished with covers, and are so held in screw holes that they can not fall out.

Finishes: Black enamel is the standard finish for metal covers, and will be furnished unless another finish is specified on the order. Galvanized finish will be furnished, if specifically ordered, at same price as black enamel finish. For special plated finishes, see page 182. For brass and bronze covers, plain and with special finishes, see page 182. For aluminum covers, plain and with black enamel finish, see page 182.

Black enameled, galvanized and porcelain covers of the same size may be assorted to make up a standard package, regardless of style of cover. No other assortment of covers only is allowed.

Standard package discount is allowed on covers when an order is for a standard package of Condulet bodies and an equal number of covers for those bodies.

Condulet bodies of the G and H series are listed on pages 57 to 60, inclusive. Gaskets are listed on page 176. For sizes of wire holes in covers, see page 172.

CONDULET BODIES—J AND K SERIES

TYPES J, JA AND JB

Take Norbitt Conduletto Fittings and Blank Metal Cover

Type J
Showing Norbitt Conduletto Receptacle with Shade Holder Groove
Mounted (Broken-away and Exploded View)

Condulet bodies of the J and K series are so designed that the bases of Norbitt Conduletto fittings or blank metal covers fasten to them by means of a single screw.

The cap of the Norbitt Conduletto Hubbell plug receptacle is secured to its base by a single center screw.

The cap of a Norbitt Conduletto receptacle or rosette is secured to its base by two screws, which also complete the electrical connection.

A gasket is furnished with each Norbitt Conduletto fitting and blank metal cover, and makes the installation weatherproof.

Important Information Concerning Condulet Bodies Listed on This Page

Norbitt Conduletto fittings and the blank metal cover are made in one size only, and are interchangeable on all Condulet bodies of the J and K series.

Proper fastening screws are furnished with Norbitt Conduletto fittings and blank metal cover, and are so held in screw holes that they can not fall out.

Finishes: Black enamel is the standard finish for Condulet bodies, and will be furnished unless another finish is specified on the order. Galvanized finish on exterior and black enamel finish on interior of Condulet bodies will be furnished, at same price as all black enamel finish, when the order specifies galvanized finish. For special plated finishes, see page 182. For cast brass and cast bronze Condulet bodies, plain and with special finishes, see page 182. For aluminum Condulet bodies, plain and with black enamel finish, see page 182.

Black enameled and galvanized Condulet bodies of the same type and size may be assorted to make up a standard package. No other assortment is allowed.

Norbitt Conduletto fittings are listed on page 187. Blank metal cover is listed on page 87. Gasket for Norbitt Conduletto fittings and blank metal cover is listed on page 176. Condulet reducers are listed on page 171.

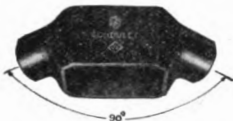

Condulet bodies of the J and K series are listed on pages 65 to 67, inclusive.

CONDULET BODIES WITH ELLIPTICAL OPENINGS—RJ AND RK SERIES

TYPES RJ AND RJA

Take Elliptical Conduletto Fittings and Elliptical Covers

Type RJ
Showing Elliptical Conduletto Receptacle
(Broken-away and Exploded View)

Type RJ
Showing Elliptical Conduletto Rosette
(Broken-away and Exploded View)

Condulet bodies with elliptical openings are so designed that elliptical Conduletto fittings and elliptical covers fasten to them by means of two screws which are always accessible. These two screws secure both cap and base of an elliptical Conduletto fitting to the Condulet body.

Ample space is provided in the Condulet body for the unobstructed passage of extra wires. A gasket is furnished with each elliptical Conduletto fitting, and makes the installation weather-proof. Gaskets are not furnished with elliptical covers, and if desired must be ordered separately.

Important Information Concerning Condulet Bodies Listed on This Page

Elliptical Conduletto fittings and elliptical covers are made in one size only, and are interchangeable on Condulet bodies of the RJ and RK series.

Proper fastening screws are furnished with elliptical Conduletto fittings and elliptical Condulet covers, and are so held in screw holes that they can not fall out.

Finishes: Black enamel is the standard finish for Condulet bodies, and will be furnished unless another finish is specified on the order. Galvanized finish on exterior and black enamel finish on interior of Condulet bodies will be furnished, at same price as all black enamel finish, when the order specifies galvanized finish. For special plated finishes, see page 182. For cast brass and cast bronze Condulet bodies, plain and with special finishes, see page 182. For aluminum Condulet bodies, plain and with black enamel finish, see page 182.

Black enameled and galvanized Condulet bodies of the same type and size may be assorted to make up a standard package. No other assortment is allowed.

Elliptical Conduletto fittings are listed on page 189. Elliptical covers are listed on page 73. Elliptical gaskets are listed on page 176. Condulet reducers are listed on page 171.

Condulet bodies of the RJ and RK series are listed on pages 69 to 72, inclusive.

Important Information Concerning Covers Listed on This Page

Elliptical covers are made in one size only, and are interchangeable on all elliptical Condulet bodies—RJ and RK series.

Proper fastening screws are furnished with covers, and are so held in screw holes that they can not fall out.

Finishes: Black enamel is the standard finish for metal covers, and will be furnished unless another finish is specified on the order. Galvanized finish, when specifically ordered, will be furnished at same price as black enamel finish. For special plated finishes, see page 182. For brass and bronze covers, plain and with special finishes, see page 182. For aluminum covers, plain and with black enamel finish, see page 182.

Black enameled, galvanized and porcelain elliptical covers may be assorted to make up a standard package. No other assortment is allowed.

Standard package discount is allowed on covers when an order is for a standard package of Condulet bodies and an equal number of covers for those bodies; but on an order for covers alone, standard package discount is allowed, only, on the specified standard package quantity of covers.

For sizes of wire holes in covers, see page 172.

Condulet bodies of the RJ and RK series are listed on pages 69 to 72, inclusive. Elliptical gaskets are listed on page 176.

Prices for these Condulets in brass, marine finish, will be quoted upon request.
Black enameled and galvanized Condulets of the same type and size may be assorted to make up a standard package. No other assortment is allowed.
Globes are listed separately on page 173. Guards are listed separately on page 173. Sealing plate is listed separately on page 173. Gaskets are listed separately on page 176. Condulet reducers are listed on page 171.
Condulets of the VH series are listed on pages 102 to 105, inclusive.

(Cross Reference Page 103)

CONDULETS—VH SERIES—Continued

TYPES VHE, VHF AND VHD—Iron

Vapor, Gas and Dust-Proof—Take any Regular Mazda Lamp up to and Including 100-Watt, or any Lamp with Dimensions not Exceeding $3\frac{3}{4}$ x $7\frac{3}{4}$ Inches

Furnished with Crouse-Hinds Receptacle CCV337, Sealing Plate, Gaskets and all necessary Fastening Screws, and with or without Globe and Guard

Type VHE
(Padlock not included in list prices)

For marine work and in breweries, refineries, flour mills or wherever there is dampness, gas or fine dust, Condulets of the VH series meet every requirement.

These Condulets remain vapor, gas and dust-proof even though globes be broken or removed for lamp renewals.

Crouse-Hinds receptacle CCV337 is the only receptacle that can be mounted in these Condulets.

Clear globes are regularly furnished on orders for complete Condulets.

Colored globes will be furnished with Condulets of the VH series, if specifically ordered, at the following increases over list prices for complete Condulets: opal, \$.90; green, blue or orange, \$1.55; ruby, \$2.10.

Globes and guards for Condulets of the VH series are made in one size only.

Padlock is not included in prices for Condulets of the VH series, but is listed on page 175.

Finishes: Black enamel is the standard finish for Condulets, and will be furnished unless another finish is specified on the order. Galvanized finish on exterior and black enamel finish on interior of Condulets will be furnished, at same price as for all black enamel finish when the order specifies galvanized finish. For special plated finishes, see page 182. For cast bronze Condulets, plain and with special finishes, see page 182. For aluminum Condulets, plain and with black enamel finish, see page 182. Prices for cast brass Condulets, marine finish, scheduled on page 182, do not apply to Condulets of the V and VH series. Prices for these Condulets in brass, marine finish, will be quoted upon request.

Black enameled and galvanized Condulets of the same type and size may be assorted to make up a standard package. No other assortment is allowed.

Receptacle CCV337 is listed separately on page 194. Globes and Guards are listed separately on page 173.

Sealing plate is listed separately on page 173. Gaskets are listed separately on page 176. Padlock is listed on page 175. Condulet reducers are listed on page 171.

Condulets of the VH series are listed on pages 102 to 105, inclusive, and pages 110 to 113, inclusive.

HAND LAMPS

TYPE VS—Aluminum

TYPE VS—Brass

Vapor, Gas and Dust-proof Portable Hand Lamp

Takes any Lamp with Dimensions not Exceeding $2\frac{1}{2} \times 5\frac{1}{4}$ Inches*

Furnished with Crouse-Hinds Receptacle C9514, Clear Globe, Guard and Gaskets

Type VS hand lamps are exceptionally well suited for use in garages, refineries, flour mills, for marine work, or wherever there is inflammable vapor, fine dust or moisture in the air.

Globes listed below can also be used on the V series of Condulets, and when so used take any lamp with dimensions not exceeding $2\frac{1}{2} \times 4\frac{1}{4}$ inches. These dimensions permit the use of any lamp having a bulb that is no larger than an S14 or G18 $\frac{1}{2}$.

The globes listed below are smaller than those listed in Condulet Catalogue No. 1000 and when used on Condulets of the V series require a correspondingly smaller guard than that listed in Condulet Catalogue No. 1000. This smaller guard is listed below.

Guards VS095 and VS950, listed below for use with type VS hand lamps, have a hook and are provided with a locking cam, which is held closed by a knurled screw. Guards V950 and V95, listed below for use with Condulets of the V series, have no hook and are provided with a locking cam, which is arranged to take a padlock.

Important Information Concerning Condulets Listed on This and the Opposite Page

The universal fastening plates, furnished with Condulets listed on the opposite page, take Crouse-Hinds type YKK knife switches or knife switches of other manufacturers, as follows:

Switches Arranged for 30 Ampere, 250 Volt, Cartridge and 30 Ampere, 125 Volt, Plug Fuses

2-Pole: CROUSE-HINDS—(Cartridge) YKK302. BRYANT—(Plug) 1695, 1981. CONN. ELEC.—(Plug) 01502, D. & W.—(Plug) 25028. G. E. CO.—(Plug) 42869. PAISTE—(Plug) 4014, 4016. TRUMBULL—(Cartridge) 704, 724, (Plug) 701, 721.
3-Pole: CROUSE-HINDS—(Cartridge) YKK303. BRYANT—(Plug) 1986. PAISTE—(Cartridge) 4033, (Plug) 4025, 4029. TRUMBULL—(Cartridge) 725, (Plug) 723.

Switches Arranged for 60 Ampere, 250 Volt, Cartridge Fuses

2-Pole: CROUSE-HINDS—(Cartridge) YKK602. PAISTE—(Cartridge) 5151.
3-Pole: CROUSE-HINDS—(Cartridge) YKK603. PAISTE—(Cartridge) 5153.

Switches are not included in list prices on this page, but Condulets listed on this page take 100 or 200 ampere, Crouse-Hinds type B knife switches with high clips or knife switches of other manufacturers, as follows:

Switches Arranged for 100 Ampere, 250 Volt, Cartridge Fuses

2-Pole: CROUSE-HINDS—(Cartridge) 31364—Specify high clips. OTHER MANUFACTURERS—(Cartridge) Switches conforming with dimensions given on page 135.
3-Pole: CROUSE-HINDS—(Cartridge) 31484—Specify high clips. OTHER MANUFACTURERS—(Cartridge) Switches conforming with dimensions given on page 135.

Switches Arranged for 200 Ampere, 250 Volt, Cartridge Fuses

2-Pole: CROUSE-HINDS—(Cartridge) 31366—Specify high clips. OTHER MANUFACTURERS—(Cartridge) Switches conforming with dimensions given on page 135.
3-Pole: CROUSE-HINDS—(Cartridge) 31486—Specify high clips. OTHER MANUFACTURERS—(Cartridge) Switches conforming with dimensions given on page 135.

Crouse-Hinds type YKK knife switches arranged for cartridge fuses are listed on page 135. Crouse-Hinds type B knife switches with high clips arranged for cartridge fuses are enumerated on page 135 and listed in Crouse-Hinds Knife Switch Bulletin. Padlock is not included in above list prices, but will be furnished extra, if specified.

For finishes and assortments, see note on page 91.

Condulet reducers are listed on page 171. We will furnish fuses.

Condulets of the YKW series are listed on pages 132 to 135, inclusive.

Important Information Concerning Condulets Listed on This Page

Switches are not included in above list prices, but the universal fastening plates, furnished with above Condulets, take Crouse-Hinds type YKK knife switches or knife switches of other manufacturers, as follows:

- Switches Arranged for 30 Ampere, 250 Volt, Cartridge and 30 Ampere, 125 Volt, Plug Fuses
- 2-Pole: CROUSE-HINDS—(Cartridge) YKK302. BRYANT—(Plug) 1695, 1981. CONN. ELEC.—(Plug) 01502. D. & W.—(Plug) 25028. G. E. CO.—(Plug) 42869. PAISTE—(Plug) 4014, 4016. TRUMBULL—(Cartridge) 704, 724, (Plug) 701, 721.
- 3-Pole: CROUSE-HINDS—(Cartridge) YKK303. BRYANT—(Plug) 1986. PAISTE—(Cartridge) 4033, (Plug) 4025, 4029. TRUMBULL—(Cartridge) 725, (Plug) 723.

Switches Arranged for 60 Ampere, 250 Volt, Cartridge Fuses

- 2-Pole: CROUSE-HINDS—(Cartridge) YKK602. PAISTE—(Cartridge) 5151.
- 3-Pole: CROUSE-HINDS—(Cartridge) YKK603. PAISTE—(Cartridge) 5153.
- Crouse-Hinds type YKK knife switches arranged for cartridge fuses are listed on page 135. We will furnish fuses.

Padlock is not included in above list prices.

For finishes, see note on page 91.

Black enameled and galvanized Condulets of the same type and size may be assorted to make up a standard package. No other assortment is allowed.

Condulet reducers are listed on page 171.

Condulets of the YKW series are listed on pages 132 to 135, inclusive.

†From bottom of slate base to highest point of clip.
‡From bottom of slate base to highest point of handle.

Any switch with dimensions not exceeding those specified "maximum" and with dimensions the same as those specified "fixed," in above schedule, will fit Condulets of corresponding classification in the YKW series.

MOTOR STARTING SWITCH CONDULETS TYPE MF

Furnished Complete with Fusible Switch, but without Fuses

Crouse-Hinds Motor Starting Switch Condulet is a substantial, iron-clad, fool-proof switch, designed for starting small three-phase motors. The switch is of the double-throw knife-blade type; its running side is arranged for fuses, but its starting side is without provision for fuse protection.

The mechanism is so designed that the switch cannot be thrown from "off" to "running" position, without first being thrown to "starting" position. After it has been thrown to "starting" position and the operator has released the handle, a spring automatically and quickly carries the switch to "running" position. This action prevents the motor from slowing down perceptibly during the operation of the switch. Padlocks can be used to lock the switch in either the "off" or the "running" position, and also to lock the door shut.

As regularly furnished, the door of the switch is rabbetted, making a joint that is, for all practical purposes, dustproof. A special, gasketed door will be furnished at an advance of \$2.00 in the list price. When furnished with this gasketed door, the Condulet is not only dust-proof, but is also water-tight.

The switch will be arranged with Star-Delta starting connections without extra charge, if the specifications read "With Star-Delta Starting Connections." When used with this connection, it is necessary to install a separate main line switch ahead of the motor starting switch condulet.

We will furnish switches for Condulets listed above, and the adjustable bars, furnished with each Condulet, permit the mounting of any snap or pull switch enumerated on page 62 or 63.

Adapting rings, furnished with the Condulets, are required in mounting 5 or 10 ampere switches. No adapting ring is required in mounting a 20 ampere switch.

We will furnish cut-outs for Condulets listed above, and the universal cut-out fastening plates, furnished with the Condulets, take cut-outs enumerated on opposite page.

For finishes and assortments, see note on page 91.

Condulet reducers are listed on page 171.

Condulets of the Z series are listed on pages 136 to 143, inclusive.

(Cross Reference Page 143)

CONDULETS—PR SERIES
TYPES PRC, PRT AND PRXInside Dimensions—Diameter, 6 $\frac{1}{8}$ Inches; Depth, 2 $\frac{3}{8}$ Inches
Furnished with Cast Cover, Gasket and Cap Screws for Cover

Condulets of the PR series are for use where durable, water-tight junction boxes of medium size are required, as in railroad yards and shops. They are also suitable for underneath or overhead car wiring installations.

The hubs on these Condulets are so designed as to insure a clearance of at least three-quarters of an inch between the surface wired over and the conduit.

These Condulets, when used on car roofs, give no opportunity for the accumulation of cinders—a feature which prevents the otherwise rapid deterioration of the roof covering along the conduit and around the Condulet.

The cover overhangs the Condulet body and is held in place by four heavy brass cap screws. The joint is made water-tight by a gasket.

The bottom of the Condulet is reinforced at the center, to allow drilling and tapping for an extra conduit or for the suspension of a center lamp fixture of pedestal design.

Finishes: Black enamel is the standard finish for Condulets, and will be furnished unless another finish is specified on the order. Galvanized finish on exterior and black enamel finish on interior of Condulets will be furnished, at same price as all black enamel finish, when the order specifies galvanized finish.

Gasket is listed separately on page 177. Condulet reducers are listed on page 171. Black enameled and galvanized Condulets of the same type and size may be assorted to make up a standard package. No other assortment is allowed.

Fixture fastening screw holes are drilled and tapped for 10-30 screws.

Condulet bodies of the CL series take the following fittings or fixtures:

CROUSE-HINDS—Combination reflector holder and socket equipment CRSE1, listed on page 160. Vapor, gas and dust-proof equipments VGDE1 and VGDE2, listed on page 160. Reflector and receptacle holder SRH2, listed on page 160; reflector SH25, listed on page 160, and Norbitt Conduletto clamp receptacle C337, listed on page 180. Receptacle mounting plate RMP1, listed on page 160, and Norbitt Conduletto clamp receptacle C337, listed on page 180. Terminal block CF101, listed on page 160. Blank covers, listed on page 151. Gaskets for blank covers LOB00 and LOB000 are listed separately on page 177.

ADAMS & WESTLAKE CO.—Fixtures S-912, 17080 and 18010.
SAFETY CAR HEATING AND LIGHTING CO.—Pendant 8294.

For finishes and assortments, see note on page 144. Condulet reducers are listed on page 171.

We will furnish fittings or fixtures of other manufacturers for above Condulet bodies.

CONDULET BODIES

TYPES UGC AND UGX

Inside Dimensions: 6 $\frac{1}{8}$ x6 $\frac{7}{8}$ x3 Inches

Type UGC Condulet Body with Blank Cover CX00 Attached

Types UGC and UGX Condulets, being extra heavy, are particularly suited for use in railroad yards, manholes, subways, around coast defense fortifications and wherever a rugged water-tight Condulet is desired.

They can be used in combination with the yard charging Condulets, illustrated and listed on pages 163 and 164 of Condulet Catalog No. 1000, either for surface or underground conduit installations.

The cover is firmly held in place by brass cap screws, and a heavy gasket of high grade rubber securely seals the opening. The use of brass cap screws and a high grade rubber gasket makes it easy to take off and replace the cover.

TYPE UGC CONDULET BODIES—For Two Conduits

Size in inches.....	1	1 $\frac{1}{4}$	1 $\frac{1}{2}$	2

DOUBLE RECEPTACLE HOUSING
For use with Types UGC and UGX Condulet Bodies
Complete with Two 100 Ampere Rectangular
Receptacles BR100, Spring Doors, Gasket
and Fastening Screws. See note below.*

EXTENSION PLATE
For Two-Inch Conduit Stem
For Receptacle Housing CHXS100

CHXS100Cat. No.	CXH6
5Std. Pkg.	5
140 lbs.	Ship. Wt. Std. Pkg.	65 lbs.
\$29.00	List Price, each..	\$3.00

*Receptacle housing listed above is regularly furnished with two rectangular receptacles BR100, requiring the use of rectangular plugs BPF100 or BPB100, but if specifically ordered, two round receptacles BRA100, requiring the use of round plugs BPFA100 or M. C. B. standard plugs, will be furnished, at an advance of \$5.50 in the list price. Spring doors are regularly furnished on receptacle housings, but if specifically ordered, removable doors will be furnished at the same price.

Finishes: Black enamel is the standard finish for Condulet bodies, and will be furnished unless another finish is specified on the order. Galvanized finish on exterior and black enamel finish on interior of Condulet bodies will be furnished, at same price as all black enamel finish, when the order specifies galvanized finish. Black enameled and galvanized Condulet bodies of the same type and size may be assorted to make up a standard package.

TYPE YQ CONDULETS

For 2 or 3-Pole Plug Receptacles and 2 or 3-Wire Cartridge or Plug Fuse Cut-outs

**Furnished Complete with Crouse-Hinds Plug Receptacle and Crouse-Hinds Cut-out,
but without Plug or Fuses**

Type YQ

(Broken-away View)

Showing Cut-out PE52E and Receptacle RYQ303 Mounted, also
Plug RQ303 and Padlock.
Plug and Padlock are not included in List Prices for Condulets

These Condulets provide a housing for a combination of plug receptacle and cut-out.

They are particularly suited for use in shops having portable tools, also in garages, laundries, railroad yards, etc. They are weather-proof and, therefore, can be installed either indoors or outdoors.

Two types of N. E. C. cut-outs are furnished—cartridge and plug. The cartridge type can be used on circuits up to 30 amperes, 250 volts, and the plug type on circuits up to 30 amperes, 125 volts.

The door over the cut-out is provided with a spring catch and can be locked with a padlock if desired. The door covering the plug opening is rabbetted and is kept closed by a plunger spring, when the plug is not in place, thus preventing the entrance of dust, moisture and insects.

Finishes: Black enamel is the standard finish for Condulet elbows and Condulet couplings listed above, and will be furnished unless another finish is specified on the order. Galvanized finish on exterior and black enamel finish on interior will be furnished, at same price as all black enamel finish, when the order specifies galvanized finish. For special plated finishes, see page 182. For cast brass and cast bronze elbows and couplings, plain and with special finishes, see page 182. For aluminum elbows and couplings, plain and with black enamel finish, see page 182. Above Condulet elbows or couplings of the same size with black enamel or galvanized finish may be assorted to make up a standard package. No other assortment is allowed.

Dipped brass is the standard finish for shade holders, but polished or brush brass finish will be furnished at same price, if specifically ordered. No assortment of shade holders is allowed in making up a standard package.

FINISHES

IRON CONDULETS AND COVERS

To determine the list prices of iron Condulets or covers with special plated finishes, use the following schedule:

Hot Galvanized	Multiply the standard list price of the article in iron with black enamel finish by 1½.
Brass Plated	Plain Finish: Multiply the standard list price of the article in iron with black enamel finish by 1½. Polished Finish: Multiply the standard list price of the article in iron with black enamel finish by 3. Oxidized Finish: Multiply the standard list price of the article in iron with black enamel finish by 3.
Copper Plated	Plain Finish: Multiply the standard list price of the article in iron with black enamel finish by 1½. Polished Finish: Multiply the standard list price of the article in iron with black enamel finish by 3. Oxidized Finish: Multiply the standard list price of the article in iron with black enamel finish by 3.
Nickel Plated	Plain Finish: Multiply the standard list price of the article in iron with black enamel finish by 1½. Polished Finish: Multiply the standard list price of the article in iron with black enamel finish by 3. Oxidized Finish: Multiply the standard list price of the article in iron with black enamel finish by 3.

Iron Condulets or covers with polished plated finishes have to be ground and polished before plate is applied and again polished after plate has been applied.

Iron Condulets or covers with plain plated finishes are not ground and polished before plate is applied and, therefore, can not be satisfactorily polished after plate is applied.

CAST BRASS AND CAST BRONZE CONDULETS

To determine the list prices of cast brass or cast bronze Condulets with various finishes, use the following schedule:

Cast Brass	Marine Finish: Multiply the standard list price of the article in iron with black enamel finish by 3. Plain Finish: (See note*) Multiply the standard list price of the article in iron with black enamel finish by 3. Polished Finish: Multiply the standard list price of the article in iron with black enamel finish by 3½. Sand Blast Finish: Multiply the standard list price of the article in iron with black enamel finish by 3½. Oxidized Finish: Multiply the standard list price of the article in iron with black enamel finish by 3½.
Cast Bronze	Plain Finish: Multiply the standard list price of the article in iron with black enamel finish by 3½. Polished Finish: Multiply the standard list price of the article in iron with black enamel finish by 3½. Sand Blast Finish: Multiply the standard list price of the article in iron with black enamel finish by 3½. Oxidized Finish: Multiply the standard list price of the article in iron with black enamel finish by 3½.

*Cast brass Condulets listed in this bulletin with marine finish will be furnished with plain finish at the same list price.

SHEET BRASS AND SHEET BRONZE COVERS

To determine the list prices of sheet brass or sheet bronze covers with various finishes, use the following schedule:

Sheet Brass	Plain Finish: Multiply the standard list price of the article in iron with black enamel finish by 3. Polished Finish: Multiply the standard list price of the article in iron with black enamel finish by 4. Sand Blast Finish: Multiply the standard list price of the article in iron with black enamel finish by 4. Oxidized Finish: Multiply the standard list price of the article in iron with black enamel finish by 4.
Sheet Bronze	Plain Finish: Multiply the standard list price of the article in iron with black enamel finish by 3. Polished Finish: Multiply the standard list price of the article in iron with black enamel finish by 4. Sand Blast Finish: Multiply the standard list price of the article in iron with black enamel finish by 4½. Oxidized Finish: Multiply the standard list price of the article in iron with black enamel finish by 4.

ALUMINUM CONDULETS AND COVERS

To determine the list prices of aluminum Condulets or covers with various finishes, use the following schedule:

Aluminum	Plain Finish: Multiply the standard list price of the article in iron with black enamel finish by 2½. Polished Finish: Multiply the standard list price of the article in iron with black enamel finish by 3. Black Enamel Finish: Multiply the standard list price of the article in iron with black enamel finish by 2½.
-----------------	--

Important Information Concerning Iron Condulets or Covers with Special Plated Finishes and Condulets or Covers of Special Metals with Various Finishes

Condulets or covers with special finishes or of special metal with various finishes can be ordered by using the catalogue number for black enamel Condulet or cover of type and size desired, followed by a description of the selected special finish or special metal.

Thus, the order for a ½-inch type FD Condulet body, brass plated and polished, should read: "FD1 brass plated polished."

A standard package quantity of Condulets or covers with a special plated finish or of a special metal with a special finish is the same as for black enamel Condulets or covers of the same type and size.

Published list prices always take precedence over list prices derived from above schedules.

Obround Conduletto fittings are made in sizes for 1/2, 3/4 and 1-inch Obround Condulet bodies. Proper fastening screws are furnished with Obround Conduletto fittings, and are so held in screw holes that they can not fall out.

We will furnish Hubbell Knife blade plug attachments.

Condulet bodies that take Obround Conduletto fittings are listed on pages 21 to 29a, inclusive. Obround gaskets are listed separately on page 176.

Norbitt Conduletto fittings are made in one size only and are interchangeable on Condulet bodies of the J and K series.

Proper fastening screw is furnished with each Norbitt Conduletto fitting, and is so held in screw hole that it can not fall out.

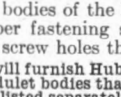

We will furnish Hubbell knife blade plug attachments.

Condulet bodies that take Norbitt Conduletto fittings are listed on pages 65, 66 and 67. Gasket is listed separately on page 176.

NORBITT CONDULETTO CLAMP FITTINGS

For Condulets of the S Series

Norbitt Conduletto Clamp Receptacle C337 is used with the following: Equipments VGDE1 and VGDE2; Crouse-Hinds Reflector and Receptacle Holder SRE2, and Receptacle Mounting Plate RMP1. Furnished with Gasket

Norbitt Conduletto Clamp Receptacle
With Shade Holder Groove
(Exploded View)

Norbitt Conduletto Clamp fittings eliminate soldered and taped joints, and have the additional advantage of enclosed contacts.

These fittings are made in two parts—base and cap. Circuit wires connect direct to the base, and two screws through the cap complete the electrical connection and clamp fitting in position.

Norbitt Conduletto Clamp fittings have a base common to all. This construction permits the substitution of one style of cap for another, without disconnecting circuit wires.

Norbitt Conduletto Clamp

CROUSE-HINDS PANELS

GENERAL PANEL BOARD SPECIFICATIONS

- Type A. Branches arranged for N. E. C. cartridge fuses, with or without knife switches.
- Type D. Branches arranged for Edison plug fuses, with or without knife switches.
- Type DD. Branches arranged for Edison plug fuses, no switches.
- Type DK. Branches arranged for Edison plug fuses, with knife switches.
- Type DP. Branches arranged for Edison plug fuses, with push button switches.
- Type DR. Branches arranged for Edison plug fuses, with rotary snap switches.
- Type F. Branches arranged for N. E. C. cartridge fuses, with rotary snap switches.
- Type H. Branches arranged for Edison plug fuses, with rotary snap switches.
- Type O. Branches arranged for N. E. C. cartridge fuses, with push button switches.
- Type P. Branches arranged for Edison plug fuses, with push button switches.

Material.—The base is highest grade black Monson slate, free from flaws or metallic veins. All current-carrying parts are best grade hard-drawn copper of 98 per cent conductivity.

Finish.—The slate is furnished with a rubbed oil finish. All exposed metal parts are finished in polished copper, carefully lacquered, except on contact surfaces.

Spacings.—All current-carrying parts are spaced in accordance with the latest requirements of the National Board of Fire Underwriters.

Current Density.—All current-carrying parts are based upon a maximum current density of 1000 amperes per square inch cross section.

Circuit Connections.—All two to two-wire panel boards are connected in the regular manner, adjacent poles of adjoining circuits being of the same polarity, but fed by separate strips. All three to two-wire panel boards are connected for the Edison three-wire system; that is, each branch circuit has one pole connected to the neutral bus bar and the other pole connected to one of the two outside bus bars. All three to two-wire panel boards are so connected that adjacent poles of adjoining circuits are of the same polarity, but fed by separate strips.

Capacities.—Fuse terminal branch circuits and branch circuits with knife switches are of 30 amperes capacity. Snap switch circuits are of 10 amperes capacity. Mains on all two to two-wire panel boards are figured at 6 amperes per circuit, and on three to two-wire panel boards at 3 amperes per circuit.

Circuit Strips.—Branch circuit strips are made of $\frac{1}{2}$ -inch by $\frac{1}{16}$ -inch copper, formed up in such a manner as to make direct connections to the main bus bars without the use of pillars, thus reducing the number of parts and contact joints to a minimum.

Circuit Switches.—Knife switches are of 30 amperes capacity and 30 amperes spacing, equipped with substantial composition handles into which the blades are molded. Contact clips and hinge standards are each formed from one piece of $\frac{1}{2}$ -inch by No. 16 gauge copper. The contact clips are flared at the top to insure proper entrance of the blades. The blades are of substantial design and made of $\frac{1}{2}$ -inch by No. 12 gauge copper. Hinge joints are held under compression by spring washers, insuring perfect contact. Snap switches are of the indicating type, 10 amperes capacity, designed especially for these panel boards, and present a neat and attractive appearance. The outer case is made of black composition and covers the entire mechanism and connections.

Main Switches.—Main switches are of substantial design and construction and are regularly mounted at the bottom of the panel board, but will be mounted at the top, if specifically ordered. This change in arrangement does not alter the size or price of the panel board. The capacities of the main connections for various panel boards are given in the schedule where panel boards are listed.

Slate Frames.—Slate frames are made of oiled Monson slate $\frac{1}{2}$ inch thick, and telescope the panel board; therefore, the outside dimensions of a slate frame are 1 inch greater than those of the panel board with which it is used. Slate frames are drilled for circuit wires and slotted for main wires, and are held in position by adjustable corner irons.

Special Finishes and Arrangements.—Black enamel slate panel boards will be furnished at an advance of 5 per cent, if specifically ordered. White Italian or Blue Vermont marble panel boards will be furnished at an advance of 25 per cent, if specifically ordered.

Type A panel boards will be furnished with branch circuit strips and switch bases made of $\frac{1}{2}$ -inch by $\frac{1}{16}$ -inch copper, and switches made with contact and standard clips driven and sweated into base blocks at an advance of 30 per cent, if specifically ordered.

Marble frames, drilled for branches and slotted for mains, will be furnished at an advance of 100 per cent, if specifically ordered.

Slate frames will be furnished slotted for both main and branch wires at an advance of 50 per cent, if specifically ordered.

CROUSE-HINDS TYPE A PANELS

2 TO 2-WIRE, 125 VOLTS

Mains—2-wire. Branches—Double, Arranged for N.E.C. Cartridge Fuses

Panels furnished with main connections at top, if so ordered, without extra charge.

Catalogue number is for panel only. If slate frame or cabinet is required, order should so state and give number of panel with which they are to be used. *Prices under heading "Panel with Cabinet" include panel complete with cabinet, and slate frame if one is required.

Prices for single-branch panels, 125 or 250 volts, and for double-branch panels, 250 volts, also for through-feed panels, will be quoted upon request. Prices do not include fuses. Order by catalogue number.

For description of cabinets listed above, see one of the following pages.

CROUSE-HINDS TYPE A PANELS

3 TO 2-WIRE, 125 VOLTS

Mains—3-Wire. Branches—Double, Arranged for N.E.C. Cartridge Fuses

Panels furnished with main connections at top, if so ordered, without extra charge.

Catalogue number is for panel only. If slate frame or cabinet is required, order should so state and give number of panel with which they are to be used. *Prices under heading "Panel with Cabinet" include panel complete with cabinet, and slate frame if one is required.

Prices for through-feed panels will be quoted upon request.

Prices do not include fuses. Order by catalogue number.

For description of cabinets listed above, see one of the following pages.

CROUSE-HINDS METER LOOP PANELS

METER LOOPS FOR STANDARD PANEL BOARDS

Frequently it is desirable to have a panel board arranged with meter loop. We therefore give below a schedule of the extra list prices to be added to the list prices of standard panel boards when they are to be equipped with meter loops. The addition of meter loop does not change size of standard panel board.

A 2 TO 2-wire Double-branch
Panel with Meter Loops

LIST PRICES OF METER LOOPS FOR ALL 2 TO 2-WIRE DOUBLE-BRANCH STANDARD PANEL BOARDS, 125 VOLTS

The Following List Prices are to be Added to the List Prices of Standard Panel Boards

No. of Circuits on Panel Board	Extra List Price	No. of Circuits on Panel Board	Extra List Price	No. of Circuits on Panel Board	Extra List Price	No. of Circuits on Panel Board	Extra List Price
2 to 4	\$2.00	6 to 10	\$2.20	12 to 16	\$2.60	18 to 32	\$3.00

LIST PRICES OF METER LOOPS FOR ALL 3 TO 2-WIRE DOUBLE-BRANCH CONVERTIBLE PANEL BOARDS, 125 VOLTS

The Following List Prices are to be Added to the List Prices of Convertible Panel

No. of Circuits on Panel Board	Extra List Price	No. of Circuits on Panel Board	Extra List Price	No. of Circuits on Panel Board	Extra List Price	No. of Circuits on Panel Board	Extra List Price
2 to 4	\$2.10	6 to 10	\$2.30	12 to 16	\$2.70	18 to 32	\$3.10

When ordering a panel board with meter loop give catalogue number of standard panel board and state that it is to have a meter loop. List prices for meter loops do not include the wire connections between panel board and meter.

CROUSE-HINDS CONVERTIBLE PANELS

THREE-WIRE, ALL TYPES

A 3 to 2-Wire Panel with Convertible Mains

If specifically ordered, three to two-wire panel boards of any type will be furnished with convertible mains having a capacity of 6 amperes per branch on the neutral pole and 3 amperes per branch on the positive and negative poles.

General specifications of various types of panel boards apply to convertible panel boards, except in capacity of mains.

PANEL BOARDS WITH CONVERTIBLE MAINS

**Schedule of Extra Heights and List Prices to be Added to 3 to 2-wire Standard Panel Boards
Widths Remain the Same**

Description of Mains	No. of Circuits	CAPACITY OF MAINS AMPERES		Additional Height (width same as Standard)	Additional List Price of Panel	Additional List Price of Slate Frame

	6 to 10	30	60	2	2.20	.20
	12 to 16	60	100	6	8.00	.50
	18 and 20	60	200	8*	15.50	3.60
	22 to 32	100	200	2*	8.80	2.90

*These panel boards will require slate frames and boxes 6 inches deep.

To obtain box reference, use the same reference letter as for standard panel board and the total height of panel board as reference numeral.

Use catalogue number of standard panel board when ordering and specify that it is to be convertible.

CROUSE-HINDS METERING PANELS

Six-circuit, 3 to 2-wire, Multimeter Panel with Type H Circuits,
Mounted in Cabinet Arranged for Six Meters
Meter Compartment Cabinet not Furnished unless Specified

MULTIMETER PANELS

The Crouse-Hinds Multimeter is the latest and most improved type of metering panel board yet designed. The general specifications as regards material, workmanship, finish, etc., conform to the general specifications of standard panel boards.

The terminals feeding to the meters are arranged on each side of the mains at the bottom of the panel board and are arranged for N. E. C. cartridge or Edison plug fuses, as specified. On each side of the panel board above the meter leads is placed a binding nut for potential wire connections.

The individual meter bars are arranged in two vertical laminated sets placed in the center of the panel board and are supported and separated by insulating pillars and spacers. The upper ends of the meter bars are equipped with terminals for receiving the return wires from the meters. One pole of each circuit on the panel board connects directly to a common bus bar which is divided after leaving the main connection and extends vertically at each side of the meter bars. The other pole of each circuit extends to a pillar placed in the center of the Panel Board between the two sets of meter bars. These pillars are built up with spacers in such a manner that connections with the meter bars can be made by connection clips. One end of each clip engages a meter bar and the other end is clamped between the spacers of a pillar. The connection pillar is surrounded by an insulating sleeve with openings for the connection clip on only one side of the pillar. This arrangement permits connection to be made to only one meter bar at a time. The insulating sleeve is arranged so that it can easily be turned to allow connections to any one meter bar of either set. The spacers of the pillar are arranged so that the separation between any two spacers is only large enough to allow the insertion of one connection clip, thus making it impossible to make connection to any connecting pillar from more than one meter bar. The connection clip is equipped with an insulating handle, and the entire construction of the panel board is such that it is unnecessary to use tools of any kind when making changes in connections between circuits and meter bars, thus eliminating the possibility of a short circuit by accident, as frequently happens when using a screwdriver or other tool about the live parts of a panel board. These panel boards are of uniform width regardless of the number of meter connections required.

Prices for metering panel boards and cabinets will be quoted upon request. Inquiry must give complete information as to requirements, stating number of circuits, number of meter bars, system, voltage, style of main connections, style of fuses, and whether with or without switches (knife or snap) in branches, also complete description of cabinet.

Cabinets: Multimeter Panel Boards can be installed in cabinets of standard design, illustrated elsewhere in this catalogue, when it is intended to mount meters outside of cabinet, or in cabinets with compartments for meters, as illustrated above.

CROUSE-HINDS CABINETS

CABINET SPECIFICATIONS

Crouse-Hinds Standard cabinets include types AK, AL, BM, BN and BT, all of which are illustrated on the following page.

Each cabinet is made up of two main parts, a steel box and a steel or wooden trim.

BOXES, TYPES A AND B

Construction.—Each box is formed from one piece of No. 10 U. S. standard gauge sheet steel, overlapped and riveted at corners.

Type A boxes, for types AK and AL cabinets, are made in sizes to allow a 2-inch space between the sides of the box and the panels for which they are intended. As this space makes it unnecessary to line the box, no lining is furnished.

Type B boxes, for types BM, BN and BT cabinets, are made to allow a 3-inch wiring compartment or gutter between the sides of the box and the slate frame surrounding the panel. These boxes are unlined, as no lining is necessary.

Finish.—Boxes are painted both inside and outside with a dead black lacquer. Boxes finished in baked black enamel will be furnished at an advance of 20 per cent in the list price, if specifically ordered.

Drilling.—Boxes will be drilled for conduit without extra charge, if complete drilling information accompanies order. Boxes will be drilled and porcelain bushings furnished for open work at an advance in the list price of 15 cents per hole. Blank drilling forms will be furnished upon request, without charge.

STEEL TRIMS, TYPES K, L, M AND N

Construction.—Steel trims are made from single pieces of No. 10 U. S. standard gauge sheet steel and are intended for mounting in vertical position.

Lock.—Doors are fitted with combination locks and spring catches, and where door is over 40 inches high, it is equipped with vault handle and shoot-bolts.

Finish.—Trims are painted both inside and outside with a dead black lacquer. A baked black enamel finish will be furnished at an advance of 20 per cent in the list price, if specifically ordered.

Type K door, for type AK (surface) cabinet, has a $\frac{3}{4}$ -inch flange around all four edges, overlapping the box. This form of construction makes the box dust-proof and provides a rigid door. The door is hinged directly to the box and, for this reason, should always be ordered with the box.

Type L trim, for type AL (flush) cabinet, has a $3\frac{1}{2}$ -inch mat on all four sides. This mat is cut from one piece of sheet steel, with door opening the same size as panel board. The door is in one piece and secured to the mat by flush butt hinges. An ornamental molding is welded around the edge of the door and overlaps the mat, thereby forming a rabbet.

Type M trim, for type BM (surface) cabinet, has a 4-inch mat on all four sides. This mat is cut from one piece of sheet steel, with the door opening the same size as panel board. The door is in one piece and secured to the mat by flush butt hinges. An ornamental molding is welded around the edge of the door and overlaps the mat, thereby forming a rabbet.

Type N trim, for type BN (flush) cabinet, has a $5\frac{1}{4}$ -inch mat on all four sides. This mat is cut from one piece of sheet steel with the door opening the same size as panel board. The door is in one piece and secured to the mat by flush butt hinges. An ornamental molding is welded around the edge of the door and overlaps the mat, thereby forming a rabbet.

TYPE T WOODEN TRIM, FOR TYPE BT (FLUSH) CABINETS

Construction.—Wooden trims are made of kiln-dried white oak, $\frac{3}{8}$ inch thick. The mat is $5\frac{5}{8}$ inches wide, made with square mortised joints, with door opening the same size as panel board. The door is made with square mortised joints at the corners and has wooden panel. The door sets flush with the mat and closes against a rabbet.

Lock.—Doors are fitted with combination locks with spring catches.

Finish.—Trims are painted on unfinished surfaces with dead black lacquer, and filled and varnished on the outside. A polished finish will be furnished at an advance of 15 per cent in the list price, if specifically ordered. Door knobs and escutcheons are finished in polished brass.

Lining.—Standard wooden trims, both mat and door, are lined with No. 16 gauge sheet steel, the door lining being finished in black enamel, the mat lining in dead black lacquer.

Glass Panel.—The use of a glass panel in door is not recommended, but, if specifically ordered, this trim will be furnished with a double-thick glass panel in door at an advance of 10 per cent; with plain plate glass, at an advance of 15 per cent or with beveled plate glass, at an advance of 20 per cent.

Box and Type K Steel Door
For Surface Mounting

Type AL Cabinet
Combination of Type A Steel
Box and Type L Steel Trim
For Flush Mounting

Type BT Cabinet
Combination of Type B Steel
Box and Type T Wooden Trim
For Flush Mounting

Type BM Cabinet
Combination of Type B Steel
Box and Type M Steel Trim
For Surface Mounting

Type BN Cabinet
Combination of Type B Steel
Box and Type N Steel Trim
For Flush Mounting

Specify that cabinet is to be 6 inches in depth, if for use with a panel listed as 6 inches deep.

If slate frame is required, order should so state and give number of panel with which it is to be used.

In listings of panels, prices under heading "Panel with Cabinet" include panel complete with box and trim and slate frame, if one is required. Therefore, the price of a cabinet complete with slate frame is derived by deducting the price of the panel from the price of the panel with cabinet.

Example: Panel No. 50001 (list price \$4.10), deducted from panel with (type BM) cabinet (list price, \$20.10), leaves the list price of type BM cabinet, which is \$16.00 including slate frame.

The price of a cabinet without slate frame, where one is ordinarily supplied, is derived by deducting the price of the panel and price of slate frame from the price of the panel with cabinet.

Example: Panel No. 50001 (list price, \$4.10) plus slate frame (list price, \$3.00), deducted from panel with (type BM) cabinet (list price, \$20.10), leaves list price of type BM cabinet without slate frame, which is \$13.00.

The box reference (Box Ref.) appearing opposite every panel board listed is a key for ordering the proper cabinet, box or trim for use with that particular panel board.

Examples: To order a complete type BM cabinet for panel No. 50001, add to the panel's box reference, C8, the cabinet's type letters, BM, making C8BM.

To order a B box only, for panel No. 50001, add to the panel's box reference, C8, the box's type letter, B, making C8B.

To order an M trim only, for panel No. 50001, add to the panel's box reference, C8, the trim's type letter M, making C8M.

Prices for back gutter cabinets will be furnished upon request.

Prices for boxes and trims separately will be furnished upon request.

CROUSE-HINDS RESIDENCE PANELS

For One and Two-family Houses

5	165977	7.00	9	16	A16	11.20	15.00			10	165980	12.60	15½	16	E16	17.40	21.80		

*Box reference is the key to the proper combination of panel and cabinet.

The Crouse-Hinds Residence Panel Board equipment combines the main service switch, meter loop and circuit fuses in a single steel cabinet. The meter loop is provided with a sealing arrangement which prevents theft of current and makes it unnecessary to remove the meter with each change of occupancy.

The satisfactory results, in safety, efficiency and durability, obtained by the use of this type of installation, at only a slight, if any, additional cost, should receive favorable consideration.

Residence panel boards have a capacity of 30 amperes at 125 volts, and conform to the general panel board specifications given on another page.

Cabinets are provided with knock-outs, opposite wire terminals on panels, which can be used for either bushings or conduit. Doors are hinged at top, so as to close by gravity, and are held shut by a snap catch.

Boxes are formed from one piece of No. 14 U. S. gauge steel, overlapped and riveted at the corners. They are made to allow a 1-inch space between the sides of panel and box, and are provided with all necessary knock-outs, which can be used for conduit or bushings.

Trims are made from one piece of No. 14 U. S. gauge steel. Doors for surface boxes are flanged on all four edges to overlap the box, and have the hinges welded to both door and box. Trims for flush boxes have mats 2½ inches wide and door openings of the same size as panel. Doors for flush cabinets have a strip welded around the edges to overlap the mat, and hinges that are welded to both door and mat. Mats are fastened to boxes by screws that thread into flanges on the boxes.

Cabinets are regularly furnished as illustrated above, with knock-outs opposite terminals on panels. If it is desired to mount panel in any other position and the necessary information is given on the order, the cabinet will be furnished with the hinging of door and the knock-outs arranged accordingly, all without extra charge.

WEATHERPROOF COPPER WIRES

No. 4 Solid Weatherproof

No. 2 Stranded Weatherproof

These wires have three closely woven braids of cotton, all thoroughly saturated with a black weatherproof compound, which shows no signs of softening under ordinary temperature. The outer braid is smoothly polished. Stranded wires, including larger sizes of feeder cable, are braided with standard cotton yarn. The style of stranding shown in table below is a regular product of the factory but the conductor can be specially stranded of a greater or less number of wires if desired. Concentric strands are used entirely as that gives the smallest diameter conductor for the carrying capacity.

Wire—Bare, Insulated and Strand

WEATHERPROOF COPPER AND IRON WIRE

Triple Braided

Weatherproof Hard-Drawn Copper Wire

Triple Braided

These wires are insulated especially for the telephone and telegraph trade and railway signal work, combining the highest conductivity with the greatest tensile strength. Unless specially ordered otherwise, these wires are put up in coils as shown, thoroughly burlapped.

Sizes marked (x) are made up on special order only.

List No.	Size B. & S. Gauge	Capacity Circular Mils.	Triple Braided Approximate Pounds per Mile	Length of Coils

Double Braid will be furnished on request.

Double and Triple Braided

Weatherproof Iron Wire

Double and Triple Braided

These wires are extensively used in telephone and telegraph work, and have the same insulation as regular weatherproof line wires. They are finished with the same smooth polish as all other wires, and are put up for shipment in coils only, thoroughly wrapped in burlap.

Nos. 8, 9 and 10 Double Braided are made up on special order only.

Stranded Conductor, Triple Braided

Stranded Conductor, Triple Braided

All three braids of cotton thoroughly saturated with white fireproof compound. The compound used on the outer braid becomes very hard but still the wire retains its flexibility. As this insulation does not deteriorate in a continued high temperature, it is especially suitable for engine and boiler rooms, furnaces and foundries.

The styles of strands shown are those regularly used, but strands composed of a greater or lesser number of wires can be furnished if desired.

Prices on application.

Wire—Bare, Insulated and Strand

RUBBER-COVERED WIRES

No. 10 Solid Single Braid Wire

Solid Copper Conductors

These rubber-covered wires are made according to the specifications of the National Board of Fire Underwriters, and each coil is tested and stamped by the Wire Inspection Bureau before leaving the factory. The conductors are thoroughly tinned and are covered with two thicknesses of high-grade rubber compound, which is thoroughly vulcanized. The wires are braided with a standard cotton yarn, the braids being thoroughly saturated with a pure wax compound having a high melting point, and are smoothly and evenly finished. The smooth, hard finish given these wires enables them to be handled readily and makes them especially desirable for conduit work. The single braided wires can also be finished with a white-fireproof compound over the braid.

RUBBER-COVERED WIRES

No. 14 Solid Duplex Wire

Duplex Copper Conductors

Duplex Rubber Covered Wire consists of two National Electrical Code, single braided wires laid parallel, with a braid over all. Wire of this construction is approved by the National Board of Fire Underwriters for use in unlined conduits while single conductor wires are required double braided when placed in unlined conduits.

Fixture Wire

No. 18 Solid Conductor Fixture Wire

A single conductor wire, designed for wiring fixtures, show cases, etc., and furnished in solid or stranded conductor as wanted.

Solid conductor wires are tinned. This is not required, however, for stranded conductor, which takes a cotton wind in its place.

Conductors are insulated with new code compound and then covered with a saturated cotton braid or silk. Dry cotton can also be furnished, but is not generally required.

SOLID FIXTURE WIRE—N. E. C. STANDARD—TYPE F-32

The standard approved sizes are Nos. 16 and 18 B.&S. Can be used for wiring fixtures, without restriction, except where special forms of wire are required on account of temperature conditions.

List No.	Size B. & S. Gauge	Rubber Wall Inches	Diameter Over All Inches	Weight, Lbs. per 1000 Feet
660133	12	3/64	14/64	40

660135	16	1/32	10/64	20
660136	18	1/32	9/64	16

SOLID FIXTURE WIRE—LIGHT INSULATION—TYPE F-64

Used for wiring fixtures, except for the wiring of chains and where special forms of wire are required, because of temperature conditions. Size No. 18 B.&S. is the only size permitted by the Underwriters.

Silk-covered light fixture wire is recommended for use with especially small fixture stems, where the regular is too large.

Stranded fixture wire is recommended for use in movable stems.

Wire—Bare, Insulated and Strand

RUBBER-COVERED WIRES

No. 00 Stranded Double Braid Wire

Stranded Copper Conductors

Rubber-covered Stranded Conductors are made according to the specifications of the National Board of Fire Underwriters and each length is tested and stamped by the Wire Inspection Bureau before leaving the factory. The wires composing the conductors are thoroughly tinned and then laid up concentrically, giving the smallest diameter of any certain capacity. These conductors are pliable and are braided with cotton and saturated with a smooth and lasting compound, insuring their being readily handled in conduit work. The single braided conductors can also be finished with a white fireproof compound over the braid.

Special Stranding

C. M. desired + by C. M. in wire to be used equals number of wires in strand.

EXAMPLE:

How many 18 B. & S. will be required to make 250,000 C. M. cable? 18 B. & S. = 1624 C. M. 250,000 C. M. ÷ 1624 C. M. = 154, the number of 18 B. & S. in 250,000 C. M.

When the number of wires in a strand is given, but not their size, this can be determined as follows: The C. M. required ÷ by the number of wires required = mileage of each wire in strand. The square root of the mileage will give the diameter of wire to be used in stranding.

EXAMPLE:

What is the diameter of a wire necessary to make 1,000,000 C. M. of 427 strands? 1,000,000 C. M. ÷ 427 = 2342 C. M. of each wire. Square root of 2342 C. M. = .0484, the diameter of each wire in strand.

Prices on application.

MINING AND PARK CABLES

Mining Machine Cable

No. 4 Duplex Mining Machine Cable—Triple Braid

DUPLEX

Duplex Mining Machine Cable consists of flexible strands, rubber insulated to N. E. C. standard thickness. Each conductor is finished with a weatherproof braid and two conductors are then laid parallel and covered with two or three braids of hard cotton, which is then saturated with a weatherproof compound.

Habirshaw Park and Suburban Cables

For Underground Work

These cables are composed of conductors of any size required. High grade rubber insulation of whatever thickness necessary for the operating voltage. The insulation is covered with a rubber filled tape, then a lead jacket varying with the size of the cable. Over the lead is first a heavy bed of jute and tar, then two steel tapes covered with jute and asphalt. The cables are made single, duplex or triple conductor, as required.

These cables are laid directly in the ground. All that is necessary for installing is a trench wide enough to hold the cable and deep enough so that the cable is from twelve to fifteen inches under ground. They are a cheap and reliable substitute for the duct system, where the expense of ducts is not justified.

This method is not an experiment. It has been in successful operation for many years, and has proved as efficient, and much less expensive, than the duct system.

As prices will vary widely with cost of raw materials, and thickness of insulation required by operating voltage, no permanent price list can be prepared. Full information given on application. In writing please specify clearly all conditions of service.

Prices on application.

Wire—Bare, Insulated and Strand

LEAD ENCASED COPPER WIRES
NATIONAL ELECTRICAL CODE STANDARD

Single Conductor

Duplex Conductor

Leaded Wires and Cables

Rubber Covered—For 600 Volts or Less

These lead cables have walls of rubber; black core of National Code specifications. All conductors are taped and the stranded cables are of regular standard strand. The lead used is commercially pure, of thickness as shown in each case.

In the two conductor cables the two taped cores are laid flat and leaded. The three conductor cables have taped cores twisted with fillers to make them round. Over all there is placed tape and lead.

MISCELLANEOUS FLEXIBLE CABLES

Moving Picture Machine Cable

Picture Machine Cable

A heat and flame resisting flexible cable, especially designed for moving picture machines, where fire is a constant danger. It is made as follows: A number of soft copper strands are grouped into a cable of the required capacity (standard sizes are Nos. 4, 6, 8 and 10 B.&S.), two cotton braids, over which is then placed one asbestos braid. It is then treated with a flameproof compound. Furnished in single conductor unless otherwise requested.

Non-ignitable or N-I Conductor

This is used where an absolutely flameproof wire is desired for low tension service. Either solid or stranded conductor, tinned or covered with one asbestos wrap and two asbestos braids, thoroughly impregnated with flameproof compound.

This class of wire is not waterproof.

Asbestos Station Cables

Asbestos Station Cable

These cables are especially adapted to low tension wiring, 650 volts and less. For higher voltages varnished cambric cables with an asbestos or double underwriter's braid are recommended.

Specifications

Asbestos Station Cables are insulated as follows: First: One asbestos tape. Second: Two varnished cambric tapes. Third: Six asbestos tapes. Fourth: One muslin tape.

The total thickness of these wraps or tapings is approximately $\frac{1}{4}$ of an inch. After the application of the muslin tape the cable is run through flameproof paint, braided with cotton and finished with three coats of flameproof paint.

The copper core of conductor can be run at a temperature sufficient to melt the solder from the terminal sockets—without injury to the insulation.

This cable is not waterproof and must be run on insulators or in dry ducts.

Asbestos cables will stand a puncture test of 5,000 volts. This test can be made by wrapping any portion of the cable with tin foil and applying the test voltage between the copper core and the foil.

Wire—Bare, Insulated and Stranded

Western Electric

Flexible Cords

Flexibility is the predominating feature of our standard and special flexible cords and cables, as listed hereinafter. Every step in the manufacture of our products is carefully inspected and no expense is spared to produce the best obtainable flexible cords and cables.

Our aim is not only to meet the requirements, as set forth by the National Board of Fire Underwriters, but surpass them. A sample of Western Electric Flexible Cord, which we will gladly furnish, will firmly convince you that it is a **quality product**.

A large stock of all standard cords is always available so as to give prompt and satisfactory service.

**Method of Packing No. 18 Lamp and Parallel Cords
Other Cords and Sizes Packed in Coils**

PACKING—Lamp Cord

Lamp Cord is sealed in **watertight** and **airtight** packages, light, easy to handle and convenient to store in small spaces. Study the accompanying illustration.

The cartons are strong reinforced pasteboard boxes, each one bearing a full description of its contents.

Capacity—250 feet in coil form, uncoiling from center.

Four cartons are placed in one strong corrugated container, which is sealed with a heavy gummed strip bearing our trademark at short intervals. This forms our standard package, as illustrated.

Special Flexible Cords

Special flexible cords are packed in coil form, securely wrapped with burlap. Each coil is clearly labeled.

Flexible Lamp and Reinforced Cords

Description

The conductor consists of a number of small, annealed copper strands, each No. 30 B. & S. gauge, grouped into a cable of the required capacity. This conductor is then covered with a tight close wind of fine cotton, after which it is insulated with seamless rubber, and then covered with an ornamental braid of silk or cotton. Two of these finished conductors are then twisted around each other, or laid parallel, and braided over all with silk or cotton. Lamp cord is sold in three grades as designated, "New Code," "1909 Code," and "Commercial," which vary only in the thickness and quality of the rubber insulation enclosing the conductor.

NEW CODE CORD

This cord is made to conform to the latest National Electrical Code Standard which requires that a vulcanized rubber insulation conforming to stretch, breaking weight, electrical and chemical test be placed around each conductor, over which is placed the usual cotton or silk outer braid, and differs from the "1909 Code" only in the fact that the insulation is of a higher quality of rubber.

National Electrical Code Standard (New Code) requires 1-32 inch wall of rubber insulation on Nos. 18 and 16 cords, and 3-64 inch wall on No. 14 and larger cords. Three threads, two green and one red thread, cabled with copper strands.

1909 CODE CORD

This cord was known as "New Code" before the 1911 requirement of the National Board of Fire Underwriters specified the use of a higher quality of rubber in making up the insulation surrounding the conductor. The construction of the cord is identical with the New Code cord, with the exception that the rubber insulation is of a lower quality. It is no longer approved by the National Board of Fire Underwriters.

COMMERCIAL LAMP CORD

Commercial lamp cord has a seamless insulation of 1-64 inch rubber placed over a tight close wind of fine cotton over which is placed the usual cotton or silk outer braid. This cord is not approved by the National Board of Fire Underwriters.

Western Electric Flexible Cords

The conductors of our regular cords are composed of a number of 30 B.&S. bare annealed copper strands, grouped into a cable of the required capacity, as follows: No. 8 B.&S., 165 strands; No. 10 B.&S., 104 strands; No. 12 B.&S., 65 strands; No. 14 B.&S., 41 strands; No. 16 B.&S., 26 strands; No. 18 B.&S., 16 strands; No. 20 B.&S., 10 strands; No. 22 B.&S., 7 strands. Sizes smaller than No. 18 are not approved by the Underwriters.

NOTE: 1909 Code Cords, weight the same as New Code. Commercial Cords, weight the same as 1/4 inch Wall. The above weights are all based on pair conductors.

Lamp Cord—Type C. Single or twisted pair with cotton or silk braid over each conductor.

Parallel Cord—Type PO. Has cotton braid over each of two conductors laid parallel under cotton or silk outer braid.

Reinforced Cord—Type P. Has cotton braid over each conductor twisted together and covered with a rubber jacket, then braided over all with a hard glazed cotton.

Reinforced Cord WP.—Type PWP. Same as Type P except outer braid is saturated and finished with a weatherproofed compound.

Special Reinforced Cord—Type PS. Underwriters only permit this cord in sizes Nos. 18 and 16 for office and dwelling only where appearance is essential.

1/4 inch wall of New Code insulation with cotton braid over each conductor, twisted together and covered with a rubber jacket to make round, then braided over all with either silk or hard glazed cotton.

Wire—Bare, Insulated and Strand

INTERIOR COPPER WIRES AND CABLES

Annunciator Wire

Regular

Insulated with two winds of cotton yarn applied in opposite directions, saturated with a special wax compound and highly polished. This makes a very compact insulation. Furnished either on spools containing about 8 lbs., or exactly 1 lb. and in 1 lb. coils, and packed in cases containing approximately 200 lbs. Furnished in colors and styles as follows—either plain copper or tinned; plain copper furnished unless otherwise ordered; red, blue, red and white, brown, white, olive, yellow, blue and white.

Damp-Proof Office Wire

No. 18—Single Conductor Damp-Proof Office Wire

This wire is double wound and braided, the two winds of cotton yarn applied in opposite directions, saturated with black weatherproof compound.

The braid is specially treated with wax, highly polished, and will not collect dust. Office wire is carried regularly in the following colors: red, red and white, blue, blue and white. It is put up in coils of about 17 lbs. each, and packed in cases of approximately 200 lbs. each.

Single Conductor			Double Conductor

660440	16	34	660442	20	20

Annunciator Cables

This cable is designed for connecting the annunciator in an elevator car with the push buttons on the different floors.

Each conductor is composed of 16 strands of No. 30 B. & S. gauge soft untinned copper wire and insulated with two reverse wrappings of cotton and one cotton braid. The insulated conductors are then cabled with a steel supporting strand, where necessary to give extra tensile strength, then covered with two cotton braids. This is a dry cable and the outer braids are flameproof.

Prices on application.

Western Electric

Telephone Wires

The materials entering into the construction of our telephone wires are of the best quality; this fact combined with the rigid inspection maintained throughout the entire process of manufacture insures a "quality product."

The conductors of all these wires are thoroughly tinned. The insulation is of a high quality rubber compound and varies in thickness according to the size and requirements of the different wires; over this is placed a weatherproof braid, or when wanted for inside use a glazed cotton braid of any standard color combination.

Outside Telephone Wire

Outside Telephone Wires

These wires are furnished in coils, each coil carefully wrapped. Single conductor can be supplied when specified.

COPPER STEEL OUTSIDE WIRE

Gauge	Braid	Wgt. per 1000 Ft. (Tw. Pair)	Coil Lengths
*17 B.&S.	Twisted pair, weatherproof braid.....	36 lbs.	200-1500 ft.
†14 B.&S.	Twisted pair, weatherproof braid.....	63 lbs.	200-1500 ft.

*This wire has very largely replaced No. 14 B.&S. copper drop wire.

†This wire is very often spoken of as copper drop wire.

BRIDLE WIRE

18 B.&S.	Twisted pair, weatherproof braid.....	33 lbs.	200-1500 ft.
16 B.&S.	Twisted pair, weatherproof braid.....	42 lbs.	200-1500 ft.

Inside Telephone Wire

Inside Telephone Wires

Gauge		Wgt. per 1000 Ft. (Tw. Pair)	Coil Length
19 B.&S.	Twisted pair, olive green finished braid.....	22 lbs.	200-1500 ft.

Packed in barrels, each coil specially wrapped in heavy craft paper.

Furnished in single or triple conductors when specified.

Can be furnished in any color required, standard color being olive green.

A tracer thread is used in all conductors.

Flameproof Wire

Flameproof Wires

Gauge		Finish	Wgt. per 1000 Ft. (Tw. Pair)	Coil Lengths
16 B.&S.	Single, twisted or triple conductor	Standard color, slate and red	38 lbs.	200-1500 ft.
20 B.&S.	Single, twisted or triple conductor	Standard color, slate and red	19 lbs.	200-1500 ft.
22 B.&S.	Single, twisted or triple conductor	Standard color, slate and red	16 lbs.	200-1500 ft.

Single Ground Wire

Single Ground Wires

Gauge		Weight per 1000 Feet	Coil Length
18 B.&S.	Single ground wire.....	14 lbs.	200-1500 ft.

Also furnished in size No. 14 B.&S.

These wires are often spoken of as sub-station wires.

Wire—Bare, Insulated and Strand

16-4

Western Electric Telegraph Wires

These wires are furnished in strict accordance with the standard specifications of the largest telegraph companies of this country. They are a high-class product and can be furnished in all sizes as required. The sizes ordinarily specified are Nos. 14, 16, 18 single and twisted, with a weatherproof braid, and No. 18 in twisted pair and triple, with brown and black braid. Flameproof wires in size No. 16 single and twisted are also used by the telegraph companies.

Pot Head Wire

Pot Head Wires

The standard wire for pot head work is either 19, 20 or 22 B.&S. gauge in single or twisted conductor. The insulation of this wire is of high quality, suitable to withstand the effects of the hot sealing compound and outside exposure without a protecting braid. As a distinguishing marker one conductor of the twisted pair has a double ridge on the insulation. Make sure in ordering this wire that it has the double ridge, as this insures you a "quality product."

Weight per 1000 feet (twisted pair), 19 lbs. Coil Lengths, 200-1500 feet.

Gauge		Weight per 1000 Feet, Twisted Pair	Coil Length
19, 20 or 22 B.&S.	Pot-head wire.....	19 lbs.	200-1500 ft.

Iron Outside Drop Wire

A special drop wire which is stronger and lighter than copper and quite as flexible. The conductor is a high-grade non-rusting iron. It is insulated with good grade rubber compound, cotton braided and weatherproofed. The sizes most generally used are as follows:

Gauge	Description
19 BWG (18 B.&S.), $\frac{1}{16}$ inch diameter, insulation twisted pair outside wire.	
18 BWG (16 B.&S.), $\frac{1}{8}$ inch diameter, insulation twisted pair outside wire.	
16 BWG (14 B.&S.), $\frac{3}{16}$ inch diameter, insulation twisted pair outside wire.	
14 BWG (12 B.&S.), $\frac{1}{2}$ inch diameter, insulation twisted pair outside wire.

Western Electric

Special Flexible Cords

Deck Cable

A watertight flexible cord, made to stand severe abrasion. It is especially designed for use on boat decks and is made as follows: Two conductors of new code cotton braided cord, twisted together, reinforced by jute, and a rubber jacket, over which is then placed one cotton braid thoroughly saturated and weather-proofed.

Size B. & S.	Diameter Inches	Approx. Weight Lbs. per 1000 Ft.	Size B. & S.	Diameter Inches	Approx. Weight Lbs. per 1000 Ft.
10	.730	182	16	.505	65
12	.665	144	18	.485	52
14	.650	112

Border Light Cable

A stage cable made up of usually more than two conductors.

Elevator Cable

An extremely flexible and durable cord, especially constructed for elevator control and lighting. The conductors of this cable (usually more than two) are constructed in the usual way of New Code cord. These conductors are then grouped together and covered with three cotton braids, the outer one weatherproofed. A steel supporting strand running through the center is usually required, and this adds materially to the strength of the cable.

Heater Cord

The conductor consists of a number of small copper strands grouped into a cable of the required capacity, cotton wrapped, insulated with a thin wall of rubber compound, asbestos braided. Two of these finished conductors are then twisted together and braided over all with cotton of any desired color combination. Standard color is black.

14	.460	75

Canvasite Cord

An **acidproof** flexible cord, unusually **tough** and **durable**. This is especially designed for use in dyeing establishments, cold storage plants, tanneries and other places where mechanical and chemical conditions are severe. It is made up similar to Brewery Cord except that it has an extra weatherproof braid over the twisted conductors.

Size B. & S.	Diameter Inches	Approx. Weight	Size B. & S.	Diameter Inches	Approx. Weight

Western Electric**Special Flexible Cords****Vacuum Cleaner Cord**

As the result of careful study and observation, we offer to the trade this especially constructed cord for vacuum cleaners. It has all the strength desired and yet is small in size and extremely flexible. A cord better adapted for this purpose cannot be made.

The conductors of this cord are composed of a number of flexible copper strands, assembled into a cable having extreme flexibility. Cotton wrapped, insulated with 1/64 inch wall of New Code rubber compound and cotton braided. A rubber jacket of New Code insulation is then placed over the twisted conductors, after which it is braided with a close non-fraying braid of fast black cotton.

No. 2—49 Strand Flexible Car Wire

Car Wire

This wire is made in two styles, stranded or 7 wire, and flexible or 49 wire. The strand is covered with a wrap of cotton or paper, after which a coating of rubber is applied conforming to N. E. C. specifications. It is then covered with one, two or three braids, as specified.

3	.460	249		8	.320	93	
4	.430	207					

Bell Cord

Is designed for small bell and battery use. The conductors are composed of a few strands of soft copper assembled into a small cable. A cotton braid is then applied over each conductor. These are then twisted together and a silk braid placed over all. This cord can be furnished in any of our standard silk shades. (Standard green.)

Prices on application.

Wire—Bare, Insulated and Strand

MAGNET AND BINDING WIRE

"Deltabeston" Magnet Wire

Round and Rectangular

This wire is particularly adapted to field and armature coil winding. The insulation is an asbestos composition designed to stand extraordinary temperature, which particularly adapts it to street railway and similar use, where motors and generators experience very severe overloads. Attempts at imitation of this wire have been made without success. The trade name, "Deltabeston," represents the wire of this character that has proven its merit.

Deltabeston magnet wire, while generally used in the round type, is also manufactured in wire of a rectangular cross-section. The advantages of square or flat wires are numerous. Much greater copper section can be put into a given winding space by the use of rectangular wires, than by employing round conductors. This is

due to the fact that the small interstices necessarily occurring between adjacent round wires are practically eliminated when flat-sided wire is used.

Phosphor Bronze Binding Wire

This wire is tinned for use in binding armatures and is finished smooth to gauge and ready to take solder with acid. It has high elastic limit and tensile strength.

Wire—Bare, Insulated and Strand

RESISTANCE WIRE "Climax" Wire

"Climax" is a nickel-steel alloy which has been on the market for many years and is too well known to require extended description. It has a resistance of 50 times copper or 87 microhms per centimeter cube, with a low temperature coefficient. It is the cheapest material to use when resistance is the only consideration.

Properties of Climax Resistance Wire

Resistance per mil-foot 500 ohms at 75° F. (24° C.)
 Temperature coefficient .0004 per degree F.
 Specific gravity 8.137. Weight per cubic inch .29 lb.

COLONIAL COPPER CLAD (C. C. C.) WIRE

The use of C. C. C. wire is advantageous in all instances where strength and durability, rather than electrical conductivity, fix the size of the wire; and where, therefore, the use of copper requires a larger wire in order to get the requisite mechanical strength and ruggedness of construction than is necessary from the electrical standpoint. It consists of a core of steel entirely surrounded by, and united with, an outer envelope of copper by means of a thorough weld, combining the strength of the two with reasonable conductivity. Due to its increased strength the substitution of C. C. C. for copper wire makes line trouble the exception rather than the rule; conduces to a permanency of installation unobtainable in other materials; it incidentally effects a considerable saving in cost, a still greater one in maintenance, or in the two combined.

C. C. C. wire is furnished in two grades, having conductivity of 30% and 40% respectively.

Copper Line Wire

Hard Drawn or Annealed

These wires are drawn accurately to gauge according to specification. They are of high conductivity and tensile strength.

All copper wires are regularly drawn to B. & S. gauge and annealed, and all orders will be filled accordingly, unless otherwise stated.

BARE COPPER WIRE

Concentric Strands

Bare Copper Concentric Strand Wire

All strands are concentric laid, giving the smallest outside diameter for any certain capacity. Unless otherwise specified, cables will be furnished according to regular style of stranding. The table shows the diameter in mils of wire used according to the number of wires of which the strand is composed.

Capacity Circular Mils	Weight		Regular Style of Stranding		Diam. of Strand, Mils	Capacity Circular Mils	Weight		Regular Style of Stranding		Diam. of Strand, Mils

Wire—Bare, Insulated and Stranded

GALVANIZED WIRE

Galvanized Wire

Telephone and Telegraph Wire

There are three grades of galvanized wire, classified as follows: Extra Best Best (E. B. B.), Best Best (B. B.) and Steel. Specify grade desired.

Extra Best Best (E. B. B.) wire is made from a special stock of great purity, producing wire of absolutely uniform quality, in which the elements of softness and elongation are combined with low electrical resistance to a marked degree. It is largely employed in long lines or service where low electrical resistance is both desirable and necessary.

Best Best (B. B.) wire is made from a stock of high quality, producing a wire somewhat less uniform and of higher resistance than E. B. B., but of greater tensile strength. This grade is used almost exclusively for the construction of subscribers' lines in exchanges, and on account of its great tensile strength is best adapted for rural or farmer lines.

Steel wire has a greater tensile strength than either E. B. B. or B. B., but on account of its greater electrical resistance is not very generally used.

The different grades of wire are Extra Galvanized, i.e., the wire is protected from atmospheric action by a heavy uniform coating of spelter.

660938	1 1/8-inch	20	400	.87

Intermediate sizes take next higher list.

Galvanized strand is furnished both single and double galvanized. In ordering, state which is required.

NOTE: Add 10% for double strand.

GALVANIZED WIRE STRANDS

Galvanized Wire Strands

Uses of Strand

Guy Strand

Extra Galvanized Siemens-Martin Strand is frequently employed to guy electric railway, telegraph and telephone poles.

Messenger Strand

$\frac{1}{8}$ -inch diameter extra galvanized Siemens-Martin Strand, $\frac{3}{8}$ -inch or $\frac{1}{2}$ -inch diameter extra galvanized high strength strand is stretched from pole to pole, and from this messenger strand, so called, the heavy lead-encased telephone cable is suspended by means of clips, wire or cord at short intervals. A messenger strand thus sustains the stress due to weight of cable, wind or ice load. Common galvanized strand should never be used for this purpose, as it does not possess the requisite strength.

Catenary Method of Supporting Trolley Wires

One or more messenger strands are stretched from the center of the tracks. Every few feet along this messenger strand are pendent hangers that clamp on to the trolley wire, retaining it in a rigid, straight, horizontal line. For a single messenger strand carrying 4/0 Copper Trolley Wire, in spans of 125 to 150 feet, $\frac{3}{8}$ -inch or $\frac{1}{2}$ -inch diameter, extra galvanized Siemens-Martin Strand is frequently used. For longer spans, up to 225 feet, the $\frac{3}{8}$ -inch or $\frac{1}{2}$ -inch extra galvanized high strength strand is preferable.

Lightning Arrester for Transmission Lines

To protect high-tension current transmission lines from destructive lightning a $\frac{3}{8}$ -inch diameter extra galvanized Siemens-Martin Strand, known as an "overhead ground strand," is strung at the highest point on the supporting towers, this "overhead ground strand" being connected at frequent intervals with the ground. The extra galvanized Siemens-Martin Strand, because of its great conductivity, is employed almost exclusively for the "overhead ground strand."

COPPER SPLICING SLEEVES

Seamless Splicing Sleeves

Clark Seamless Splicing Sleeves

For Copper and Steel Cable

These sleeves are of pure seamless copper tube, specially annealed, and when encasing a steel cable, it is tinned inside and out. The splice is made by simply placing the two conductor ends into the oval sleeve and twisting at either end in opposite directions with specially designed wrenches as listed below. The resulting joint is stronger than the encased conductor (up to $\frac{1}{2}$ inch stranded Siemens Martin steel cable) and the line is guaranteed, with the splice in place, to develop in excess of 96 per cent. of its ultimate tensile strength. The joint has a conductivity about $2\frac{1}{2}$ times that of the copper conductor encased.

COPPER CONNECTORS

Fig. 10
Double Tube SleeveFig. 11
Sleeve and Wire Welded Together in One Solid Piece

Western Electric—National Copper Connectors

For Splicing Copper Wire

The above connectors are of the double tube type, and are made accurately and very close to the size of the wire for which they are intended.

When twisted the sleeve is drawn snugly around the wire, forming an absolutely solid joint which air and moisture cannot penetrate. Fig. 11 shows sleeve sawed lengthwise after being twisted.

PORCELAIN BUSHINGS

Federal Clamp Bushings

These bushings are made of one piece of the best grade of vitrified porcelain. Clamping rings are made of metal, threaded to fit threads on the porcelain. They can be used on material one-fourth of an inch or less in thickness. Longer bushings for thicker materials described below. Black top bushings if ordered in lots of 1000 or more can be furnished at slightly higher prices, quoted on application.

For glazed tubes, add 50 per cent. to list prices.

For split regular tubes, multiply list by ten (10).

For floor tubes, multiply list by six (6).

For split floor tubes, multiply list by ten (10).

For headless tubes, multiply list by four (4).

Curved and curved end tubes, multiply list by six (6).

Crossover tubes split, multiply list by ten (10).

Crossover tubes solid, multiply list by eight (8).

NOTE.—In computing prices on split floor tubes, headless tubes, curved and curved end tubes, the above list prices and lengths must be used as referring to "OVER-ALL" lengths, and not lengths under head.

Split regular tubes lengths refer to under head.

Crossover, solid and split tubes lengths refer to between heads.

SPECIAL PACKAGES

Standard Porcelain, Packed in Corrugated Paper Boxes

Special attention is called to the method of packing Standard Porcelain in heavy corrugated paper cartons. This method entirely eliminates the breakage incident to the usual barrel packages. Packing in cartons is done by hand, which insures inspection of every piece and the selection of only perfect material; this fact easily compensates for the slightly increased cost over the usual barrel packages.

Packed 100 in a Carton

Material	Over-all Dimension of Carton
1/2 x 3 inch Tubes	8 x 8 x 4 inches
1/2 x 4 inch Tubes	8 x 8 x 5 inches
3/8 x 3 inch Tubes	7 x 6 x 7 inches
5/8 inch Split Knobs	9 x 8 x 5 inches
2-wire Cleats	9 x 8 x 5 inches
3/8 x 4 inch Tubes	9 x 8 x 6 inches

Packed 500 in a Carton

1/2 x 3 inch Tubes	8 x 10 x 12 inches
1/2 x 4 inch Tubes	10 x 10 x 12 inches
3/8 x 3 inch Tubes	8 x 10 x 16 1/2 inches
5/8 x 4 inch Tubes	10 x 10 x 16 1/2 inches
5/8 inch Split Knobs	10 x 10 x 14 inches
2-wire Cleats	10 x 10 x 16 1/2 inches

PORCELAIN INSULATORS

Improved Strain Insulator

The improved porcelain strain insulator has protected end coverings. The wires passing through instead of around the insulator makes it impossible for the ends of the span or dry wires to come in contact with each other or allow any chance for leakage of current.

General Description

Electrose "Safety Strain" insulators are adapted for all the requirements of electrical transmission, railway service and for use in every relation where currents of high tension are employed.

The mechanical construction is such that all direct strain is confined entirely to the metal parts and to the insulating material disposed between the metal disks, insuring a tensile strength far in excess of ordinary requirements. All metal parts, such as loops, clevises and disks are made of galvanized drop forged steel, and placed in such relation to each other as to insure the highest possible degree of electrical resistance combined with the greatest mechanical strength.

Sectional View
Showing Loop

The metal parts are so interlinked that, if all of the insulation were removed from between them, they would engage one another and still hold the strain to which they were subjected, and thus prevent lines falling and consequent serious damage.

The corrugated and disk designs, as shown by Nos. 10, 77 and 14, are such as to prevent creepage under rated conditions, or deposits of foreign material such as dust, etc., forming a conduction path between terminals.

The eyes of all strains are extra large and of sufficient size to meet all present requirements.

All mechanical and electrical testing is done at a well equipped electrical testing laboratory, and each insulator bears the standard inspection stamp.

Cross and longitudinal sectional views, as shown, clearly illustrate the interior construction. The cross section view shows the methods of anchoring the loop, while the longitudinal view shows the method of interlocking same to prevent the line from falling.

ELECTROSE BUSHINGS

Electrose lead-in bushings and connectors are designed for high tension work. These devices are adapted for various voltages as listed below.

The locking feature consists of the threaded portion of the insulator having a shoulder on one side and a threaded ring on the other, which allows the insulator to be locked on the wall or barrier by a few turns of the ring.

No. 6206

No. 6200

NO. 6206 LOCKING BUSHING

This is a single end locking bushing, used for insulating the wire passing through a wall, or may be used for any other purpose requiring a high voltage insulating bushing. On account of its locking feature no cement is required for placing in position. It possesses great mechanical strength and very high insulating value.

List No.	Mfr. No.	Description	Length	Diam. of Body	Diam. of Hole	Test Voltage Dry	Test Voltage Rain	Wt. Lbs.	*List Price Each
700371	6206	Locking bushing.....	6 1/4 ins.	2 1/2 ins.	3/8 in.	43000	30000	1 1/2	\$3.00

NO. 6200 LOCKING BUSHING

This is a double end locking bushing, used for insulating the wire passing through a wall, or may be used for any other purpose requiring a high voltage insulating bushing. On account of its locking feature no cement is required for placing in position. It possesses great mechanical strength and very high insulating value.

700372	6200	Locking bushing.....	23 ins.	4 1/4 ins.	1 1/2 ins.	90000	60000	13 1/4	\$18.54

NO. 6224 LOCKING BUSHING

This is a locking, water and gas tight bushing, used for insulating the wire passing through a wall partition, bulkhead or cover of transformer, etc. These bushings have been adopted by the U. S. Navy for use as bulkhead bushings. Soft rubber gaskets are clamped into each end which prevents moisture from entering bushing.

SUSPENSION STRAIN CLAMPS

For Power Lines

These clamps are made of malleable iron. All parts are hot dip galvanised. The clamps are attached to the cable in the direct line of pull; therefore they (when supplied with a thin protecting shield) are suitable for use with aluminum cable. They are used in connection with disc strain insulators for strains going around angles, also for dead ending.

Dimensions A and B will be made to suit the dimensions of the fittings on the insulator with which it is to be used.

No. 33

TYPES NOS. 33 AND 34

These clamps are made to grip firmly all sizes of copper cables up to and including No. 0000 B. & S. Gauge Stranded and the equivalent aluminum.

List No.	Mfr. No.	Type	Approx. Wt. per 100	List Price per 100
720000	33	Suspension Strain Clamp..... Clevis	700 lbs.	Special
720001	34	Suspension Strain Clamp..... Loop	700 lbs.	Special

NOTE: When provided with a loop instead of clevis attachment this clamp is known as No. 34. (For use with insulators 1053 and 2052.)

TYPE NO. 5002

The design of the gripping part of this clamp is such as to provide for very heavy loads. It is made for Nos. 000 and 0000 B. & S. Gauge Stranded Cable, and the equivalent aluminum.

List No.	Mfr. No.	Type	Approx. Wt. per 100	List Price per 100
720002	5002	Suspension Strain Clamp..... Clevis	800 lbs.	Special

When ordering specify size of wire with which clamp is to be used.

LINE SUSPENSION CLAMPS

No. 5007

No. 5007

Suspension Clamps—Solid

No. 5007 and 5013 clamps are for sizes to grip No. 00 B. & S. copper cable and smaller. No. 5007 and 5013 are clevis types but can be made in the loop type.

List No.	Mfr. No.	For Wire	Type Connection	Approx. Wt. per 100	List Price per 100
720003	5007	No. 00 and Smaller.....	Clevis	400 lbs.	Special
720004	5013	No. 00 and Smaller.....	Clevis	400 lbs.	Special

No. 29

No. 30

Suspension Clamps

These clamps are intended for supporting the line wire in connection with high tension lines and are designed to be attached to the bottom of suspension type disc insulators. They are made from the best high grade malleable iron and are hot galvanized. The clamping bolts are drop-forged steel. Designed to hold No. 0 B. & S. Gauge Copper Cable and smaller. For sizes larger than No. 0 up to and including 250,000 C. M. Cable, ask for Mfr. No. 5020, the same design as illustration shown, but has wire groove 9 inches long instead of 8 inches.

List No.	Mfr. No.		Type Connection	Approx. Wt. per 100	List Price per 100
720006	29	Suspension Clamp.....	Clevis	350 lbs.	Special
720007	30	Suspension Clamp.....	Hook	350 lbs.	Special
720008	5020	Suspension Clamp.....	Clevis or Hook	400 lbs.	Special

In ordering specify size of wire with which clamp is to be used.

INSULATOR CLAMPS

Clark Insulator Clamps (Patented)

These clamps are supplied of either special high tensile strength red bronze or of the best grade malleable iron protected by a heavy coating of zinc and with steel bolts and nuts heavily copper plated or sherardized. Their use is for firmly attaching conductors to insulators. The following information should be given when ordering:

- 1st. Name and number of insulator (or fill in dimensions as shown on sketch).
- 2d. Solid wire or cable used.
- 3d. Conductor, bare or insulated.
- 4th. Exact outside diameter of conductor.

NOTE: Malleable iron clamps cannot be supplied in lots less than 100.

TYPE "A" CLAMP

This clamp is designed for use with standard insulators and provides flexible construction. The clamp is firmly attached to the conductor on either side of the insulator by means of bolt and nut. The projecting arms, engaging the groove of the insulator, transfer the end strain to a broad surface of porcelain in an effective manner. The loops surrounding the neck of the insulator, which are connected to the clamping parts by large countersunk heads, hold the clamp firmly in position. This clamp may be readily adjusted to meet any slight variations in the diameter of the insulator neck.

INSULATOR CLAMPS

Clark Insulator Clamps (Patented)

Type "C"

TYPE "C" CLAMP

This clamp is especially adapted for use in power houses for holding bus bars in place. Suitable bushings of soft copper or aluminum are provided, when desired, depending upon the conductor. It is designed for use with small sizes of standard insulators and with bare or insulated wire or cables. When insulated conductors are used, a lead bushing is provided to prevent abrading the insulation. This clamp provides rigid construction and is often used at crossings over railroad right of way.

CROSSING CLAMPS

Type "Q"—Angle Clamp

Type Q

This clamp is designed for use with standard insulation, holding the conductor in the side groove in turning curves.

It is made for curves varying from 0° to 45° and within this range presents no sharp points which might cause abrasion of the conductor.

Malleable iron clamps cannot be supplied in lots of less than 100.

DIRECTIONS FOR ORDERING

The following information should be given when placing orders.

1st. List No. or maker's name and number of insulator used (or send dimensioned drawings of insulator head).

2nd. State if conductor is bare or insulated and give exact outside diameter of conductor.

List No.	Diameter of Insulator Neck	List Price Each					
		Conductors Size $\frac{1}{4}$ inch or less		Conductors $\frac{1}{4}$ inch to $\frac{1}{2}$ inch		Conductors $\frac{1}{2}$ inch to $\frac{3}{4}$ inch	
		Galvanized Mal. Iron	Copper Composition	Galvanized Mal. Iron	Copper Composition	Galvanized Mal. Iron	Copper Composition
720009	1½ ins. to 2¼ ins.	\$0.84	\$1.08	\$1.20	\$1.44	\$1.44	\$1.92
720010	2¼ ins. to 3½ ins.	1.08	1.32	1.32	1.66	1.66	2.16
720011	3½ ins. to 4½ ins.	1.20	1.56	1.44	1.92	1.80	2.62
720012	4½ ins. to 5½ ins.	1.32	1.80	1.56	2.16	2.04	3.00

NOTE: Prices on sizes not covered in the above table will be furnished on application.

Galvanized iron can usually be supplied in six weeks.

Type "M" Line Crossing Clamp

Type "M" Line Crossing Clamp

These sets are designed to meet the requirements where high tension lines cross other lines, streets, railroads, or where special, secure and approved fastenings are desired.

The clamping members are furnished of high tensile strength copper composition or malleable iron, sherardized or galvanized. All bolts and nuts sherardized.

The conductor is protected with suitable bushings of copper, aluminum or lead, depending upon the character of the conductor used.

This form of construction provides the effect of dead end fastening while leaving the conductor continuous.

Malleable iron requires usually six weeks for delivery and orders cannot be handled in malleable iron in quantities of less than twenty-five clamps.

Required Information.—Maker's name and number of insulator. Size and character of the conductor.

List No.	Diameter of Insulator Neck	List Price Each	
		Copper Composition	Galvanized Malleable Iron
720862	1½ ins. to 2½ ins.	\$6.60	\$5.20
720863	2½ ins. to 3½ ins.	8.30	6.90
720864	3½ ins. to 4½ ins.	9.10	7.30
720865	4½ ins. to 6 ins.	10.30	8.26

NOTE: Conductor not to exceed $\frac{1}{2}$ inch in diameter.

Delivery F. O. B. Factory, Brooklyn, N. Y. For warehouse deliveries write nearest house.

CLARK INSULATOR CLAMPS

Type "T" Line Crossing Clamp

Type "T"—Line Crossing Clamp

For Circuits of 2500 Volts and Over

This clamping set is designed for use where lines cross at such points where it is essential that the conductor be fastened in a most efficient manner to insulator.

The insulator and extension clamps are usually supplied of a copper composition of high copper content and tensile strength, when used with copper conductor. Soft annealed copper split bushings protect the conductor at these clamps.

The insulator and extension clamps are joined together by extension eyebolts of galvanized iron. A turnbuckle is provided to take up any variations in dimensions between the insulators, but this may be replaced by a flat steel member, bolt, etc., as desired. The insulator and extension clamps can be supplied of galvanized malleable iron, which is recommended for use with steel conductor.

The illustration shows insulator clamp having only lower bolts, but upper bolts may be supplied if desired.

DIRECTIONS FOR ORDERING

The following information should be given when placing orders:

- 1st. List No. or maker's name and number of insulator used (or send dimensioned drawings of insulator head).
- 2nd. Whether copper, steel, aluminum, or insulated conductor is used, give exact outside diameter of conductor.
- 3rd. Distance between center line of insulator. (Maximum spacing at list prices 24 inches.)

List Prices and Data

List No.	Diameter of Insulator Neck	List Price per Set	
		Copper	Galv. Mal. Iron
1T	Up to 2 ins.	\$10.00	\$9.00
2T	Over 2 ins. to 3½ ins.	12.00	9.60
3T	Over 3½ ins. to 4½ ins.	14.00	11.00
4T	Over 4½ ins. to 6 ins.	16.00	12.40

NOTE: Galvanized iron sets cannot usually be supplied in less than six weeks.

Malleable iron cannot be furnished in lots of less than 50.

Delivery F. O. B. Factory, Brooklyn, N. Y. For warehouse deliveries write nearest house.

THOMAS LINE WIRE PROTECTORS

Single Protector

Two Protectors Bolted Together

Crossing Protectors

This protector installed at the end of those spans that cross above other power circuits, as well as telephone and telegraph lines and railroad rights of way, will eliminate the danger caused by the accidental burning off of the line wire, thus allowing it to drop and come into contact with lines below.

The protector is designed to be installed at the ends of all such spans, either singly or in tandem, depending on the mechanical strains to be carried. Provision is made for bolting together if more than one unit is used. The protector consists of a malleable iron cap with wings extending in the direction of the line wire, and also at right angles to it, of proper size and proportion to fit the various sized insulators as listed below. This cap is fitted to the top of insulator by cementing, the size depending upon the line voltage.

The shape of the wings is such that should an accidental arc form over the insulator, or the insulator be punctured, the cap will take the upper terminus of the arc and hold same until the line trouble causing the arc is removed and the arc extinguished. Most severe tests have shown that in no case was the line wire injured when this device was used.

This protector meets all the requirements of the National Electric Light Association, the American Railway, Engineering and Maintenance Association and the American Electric Railway Association.

The following prices are for all parts galvanized by the hot dip process; bolts and nuts have threads recut after galvanizing.

WOOD TOP PINS

With Steel Bolts

Furnished in unpainted locust, unless specified paraffined or otherwise treated. The length of bolt can be furnished to suit cross arm of any size. The size of cross arm should always be specified when ordering. Bolts, nuts and washers are always furnished plain. They can be furnished galvanized or sherardized. Always specify.

NOTE: The above prices cover galvanized ridge iron and galvanized bolt and nut. Washers are furnished when ridge irons are ordered with porcelain pins Nos. 101, 104, 105, 119, 120, 122 only. Furnished also of proper dimensions for using any porcelain base pins, as shown on following page, or all wood top pins, as listed above, at special prices. Iron base pins can be furnished if desired. Prices on plain material furnished on application. Through bolts not included in above prices, but can be furnished.

Delivery F. O. B. Factory, East Liverpool, O. For warehouse deliveries write nearest house.

PORCELAIN BASE PINS

With Wood Thimbles

Made with porcelain base and wood thimble having screw thread for attaching insulator. The bolt passes through the thimble and base. Bolt head is of button shape and below the head are two wings on the bolt proper which engage the wood thimble and prevent turning of the bolt. The porcelain base adds insulation, as the creeping surface and arcing distance are thereby increased. The small hole required in cross-arm effects a saving by permitting the use of smaller dimension arms.

NOTE 1: Bolts, nuts and washers furnished galvanized unless plain is specified.

NOTE 2: Length of bolt can be made to suit any crossarm. Please specify cross-arm dimensions. Variation 1 inch does not change price.

NOTE 3: Nos. 130, 130-A, 130-B and 142 Special and made to order, balance Porcelain Base Pin material listed carried in stock.

ALL METAL "LEE" PINS

With Separable Thimbles

All Metal "Lee"
Pin

The top of the base or body of this pin is threaded and the thimble is attached by means of the bolt, which passes through the base threading, through the top, and projecting a proper distance to act as a stud for attaching the thimble. When both pins and insulators are furnished by us the thimbles are cemented into the insulator at the factory without extra charge. This adds one pound to weight of insulator. The great convenience of having thimbles cemented into insulator at the factory is worthy of consideration. When extra insulators are wanted with the thimble cemented in, the list price of thimbles is \$16.70 per 100. Insulators with $1\frac{1}{2}$ inch pin take $1\frac{1}{2}$ inch thimble and 1 inch pin hole takes $\frac{3}{4}$ inch thimble.

Note: "H" and "K" dimensions made to suit cross-arms. Please specify. "A" can be furnished $\frac{3}{4}$ inch for insulator having 1 inch pin hole. "D" can be furnished $3\frac{1}{2}$ inch.

No. 03, $1\frac{1}{2}$ inch thimble always furnished unless otherwise specified. Thimbles are always furnished plain, as they are cemented into the insulators.

On prices given bolts can be decreased or increased 1 inch in length without extra charge.

Bolt can be furnished either hot galvanized, threads cut and recut, or sherardized, as desired.

Bolts are always threaded $2\frac{1}{8}$ inch at top and $2\frac{1}{2}$ inch at bottom, unless otherwise specified, and are fitted with standard hot pressed square nuts and standard washers.

Where pin hole in insulators is 1 inch in diameter No. 01, $\frac{3}{4}$ inch thimble will be furnished.

When ordering always specify the size cross-arm to be used.

The approximate weights given below are for complete pin, but when thimble is cemented in the insulator, which is usually the case, this weight is reduced by approximately 100 lbs. per 100 pins.

List No.	A Inches	B Inches	C Inches	D Inches	E Inches	F-H Inches	N Inches

POLE TOP PINS

Malleable Iron Pins—Separable Thimble

Pole Top Pin, Malleable Iron

Made of malleable iron of channel design. The top of base or body is threaded and the thimble is attached by means of a $\frac{3}{4}$ inch threaded stud, one end of which threads into the base and the other into the thimble. When both pins and insulators are furnished by us the thimbles are cemented into the insulators at the factory without extra charge. This adds one pound to weight of insulator. Thimbles are always furnished plain, not galvanized. Through bolts for fastening pins to pole are not included in price; these are standard machine bolts. The great convenience of having thimbles cemented into the insulator at the factory is worthy of special consideration. When extra insulators are wanted with thimbles cemented in, the list price of thimbles is \$16.70 per 100. Insulators with $1\frac{1}{2}$ inch pin hole take $1\frac{1}{2}$ inch thimble and 1 inch pin hole takes $\frac{3}{4}$ inch thimble.

NOTE: Thimble No. 03, $1\frac{1}{2}$ inch, furnished unless otherwise specified. Thimbles always furnished plain.

In ordering, always specify whether plain or galvanized wanted.

Price of through bolts not included in above, but we can quote on such bolts, either plain, galvanized, or sherardized. Please give length of through bolt required.

Pole Top Pins—Separable Thimble

These are hollow, being drawn from steel tube. A threaded $\frac{3}{4}$ inch stud is sweated into the top, and the thimble is screwed on this stud. Bottom part of pin is closed and securely welded; thus the lower bolt hole passes through one solid piece of flat metal, while the upper hole passes through a hollow tube. When both pins and insulators are furnished by us the thimbles are cemented into the insulators at the factory without extra charge. This adds one pound to weight of insulator. The great convenience of having thimbles cemented into the insulators at the factory is worthy of special consideration. When extra insulators are wanted with thimbles cemented in, the list price of thimbles is \$16.70 per 100. Insulators with $1\frac{1}{2}$ inch pin hole take $1\frac{1}{2}$ inch thimble and 1 inch pin hole takes $\frac{3}{4}$ inch thimble.

NOTE: Thimble No. 03, $1\frac{1}{2}$ inch, furnished unless otherwise specified. Thimbles always furnished plain.

In ordering, always specify whether plain or galvanized.

Price of through bolts not included in list, but we can quote on such bolts, either plain, galvanized, or sherardized. Please give length of through bolts required.

We can furnish all sizes of pipe pins for pole top or cross-arm, such as 2 inch, $2\frac{1}{2}$ inch, and 3 inch standard and extra heavy. Prices made on application.

PEIRCE CLAMP PINS

STEEL CROSSARM TYPE

Hot Galvanized

We recommend the use of these pins for the "Bo-Arrow" high tension arms as being strong and light and cheaper than any pin of the through bolt type. They are also for service for use on steel towers and terminal structures. By their use on the latter, stock angles may be used in place of specially fabricated angles, and the pins may be spaced as desired. If changes are desired later, they may be made without re-drilling the arms. Pins of these types can be furnished in special dimensions and with clamps to fit any desired size or shape of angle, channel, beam, pipe or rail section.

Clamp Pins

Wood Cross Arm Types

These pins are made from one piece channel steel bent double to form slot for cross arm strap. They are furnished with separable thimbles and with Peirce spring threads. We recommend the latter for insulators up to 33,000 volts, as on the smaller sizes of insulators the cost of cementing may thus be avoided. If in doubt as to the length of pin necessary for a high tension insulator, add to the length of insulator bore one-half the diameter of the lower skirt. The sum will give the minimum height of pin above cross arm.

List No.	Mfr. No.	Size of Arms, ins.	Size of Channel	Height Above Arm	Type of Thimble	Std. Pkg.	Wt. per 100	Lbs. per 100	List Price per 100

PEIRCE POLE TOP PINS

HOT GALVANIZED

While pole top pins of any desired weight, length and hole spacing can be furnished, the sizes shown below cover usual practice for most types of construction. Many engineers are now insulating the ground wire from the high tension fixture and for this purpose are using the pole top pins in place of standard bayonets.

Pole Top Pins

List No.	Mfr. No.	Material	Length Inches	Thimble	Size of Hole Inches	Between Holes Inches	Wt. Lbs. per 100	*List Price per 100

POLES AND BRACKETS

Presteel Pole

No. 2510

Hubbard "Presteel" Poles

The "Presteel" pole is composed of two high carbon steel plates, pressed into angle form and held together with diagonal through bolts and drop forged reinforcing clips.

Where poles are desired, furnished with steps, a special through bolt, with shoulder and extended end, is used. We list only one weight of pole, in four lengths but the method of manufacture permits of the use of any desired thickness of plate and of top and bottom dimensions.

Peirce Hi-Ten Brackets

Hot Galvanized

These brackets are sufficiently strong and with proper spacing for carrying the high tension distributing circuits in voltages of 33,000 and less. They may be arranged on the pole in any manner desired. They may be used with or without ground wire bayonets. Because of their truss bracing they will meet any service strain, even at sharp corners. The brace can be bent to fit almost any diameter of pole, and is provided with three holes on each side of pole to meet such adjustment, spring threads may be 1 inch or 1 1/8 as desired.

720786	2515	52 in. triangle	Separable thimble	52	12	1133	327.60

The Peirce drawn steel separable thimbles, shown on these brackets, are drawn from 18 gauge sheet steel into a seamless shell with rolled thread. They are stronger than cast iron thimbles.

Delivery F. O. B. Factory, Pittsburgh, Pa. For warehouse deliveries write nearest house.

PEIRCE HI-TENSION BRACKETS AND FIXTURES

No. 2500

Hi-Tension Brackets
Suspension Type Hot Galvanized

These brackets correspond in every way with the pin type brackets, but are made for suspension insulator unit; they will meet conditions on high tension distributing circuits of 33,000 volts and less; also made in larger sizes for higher voltage.

No. 2350

**Peirce Hi-Ten Fixtures**

These fixtures are for high tension distributing lines below 22,000 volts. They are fastened to the poles with two through bolts. The malleable castings are very heavy with reinforcing webs and fillets, and are strengthened by one leg of the pipe which extends through the casting the back of which is arranged to fit the pole face, thus doing away with the necessity for cutting gains. The fixtures are hot galvanized inside and out after assembly.

HUBBARD BO-ARROW ARMS

No. 2400

No. 2403

Hubbard Bo-Arrow Arms

Plain or Hot Galvanized

For high tension circuits from 33,000 to 66,000 volts, the Bo-Arrow Arm represents the latest practice on single circuit poles. It is fastened with but three through bolts, which also hold the ground wire bayonets. The holes go straight through the poles at right angles to the arm instead of going at three different angles. With this design of arm, maximum strength is secured with minimum weight. The arm is made for 36 inch, 52 inch and 72 inch triangles, and in two styles as shown, one for through bolt pins and one for Peirce clamp pins. Arms are made from 3 x 3 x 1/4 inch steel angle.

PEIRCE HIGH TENSION EXTENSIONS

No. 2370

No. 2380

Hi-Tension Extension

Hot Galvanized

For bringing in a high tension circuit on an existing pole route without replacing the poles or lowering the wires. Fastened to the pole with two through bolts. Adjustable to pole of from 7 to 10 inches diameter. When bolted to the pole the fixture is very rigid. It is arranged for use with either Peirce clamp pins or any pins of the through bolt type. Can be furnished to any special dimensions. Made from 3 x 2 inch steel angle and thoroughly galvanized.

Hi-Tension Extension

WITH BAYONET

Hot Galvanized

This extension provides for the three circuit wires, and the grounded guard wire above. To bring in a high tension circuit over an existing route without replacing the poles or lowering the present wires. It is adjustable to any diameter of pole from 7 to 10 inches. Arranged for use with Peirce clamp pins or pins of the through bolt type. Made from 3 x 2 inch angle and thoroughly galvanized. Extension of special dimensions can be furnished promptly.

WOOD POLES

Poles

The Western Electric Company is noted for the quality of the poles it handles and the service it renders. Our facilities for securing stock, our large and numerous concentrating yards, make it possible for us to meet any demand at a moment's notice. Our record has given us an enviable reputation in the pole business throughout the United States and Canada.

In order to give our friends and patrons a more intimate knowledge of what we can supply in the way of poles and pole-line material, we have assembled in these pages a representative list of the standard stocks carried by us.

Section of One of Our Many Pole Yards

Large Posts and Small Poles

Northern White Cedar Association Specification

"Sizes 4 inch 10 foot to 4 inch 18 foot inclusive. Sizes at top may be $\frac{1}{4}$ inch less than the diameter specified. Four inch 20 foot poles circumference measurement at top end 12 inches for seasoned stock and $12\frac{1}{2}$ inches for green or water soaked stock, 5 inch top and larger 20 foot poles take same circumference top measurement as longer poles of same size. Lengths may be two inches scant. On posts and poles 10, 12, 14, 16 feet long, 4 inch crook one way allowed. Eighteen and 20 foot poles, 4 inch crook one way allowed, the sweep to be measured from a point 4 feet from the butt. Pipe holes in top allowed. Must be cut from live timber and in other respects, except as above mentioned, conform to post specifications. Green, fresh cut or water soaked stock must be plump measure for the diameter or circumference specified."

Standard Telegraph, Telephone and Electric Poles

Northern White Cedar Association Specification

"Sizes 4 inch 25 feet and upwards. Above poles must be cut from live growing timber, peeled and reasonably well proportioned for their length. Tops must be reasonably sound, must measure in circumference as follows: seasoned 4 inch poles, 12 inches; 5 inch poles, 15 inches; 6 inch poles, $18\frac{1}{2}$ inches; 7 inch poles, 22 inches. If poles are green, fresh cut or water soaked, then 4 inch poles must measure $12\frac{1}{2}$ inches; 5 inch poles, 16 inches; 6 inch poles, $19\frac{1}{2}$ inches; 7 inch poles, $22\frac{1}{4}$ inches in circumference at top end. Lengths may be $\frac{1}{2}$ inch scant for each 5 feet in length and 6 inches long for any length from 20 feet up.

"One way sweep allowable not exceeding 1 inch for every 5 feet, for example, in a 25 foot pole, sweep not to exceed 5 inches, and in a 40 foot pole, 8 inches. Measurement for sweep shall be taken as follows: That part of the pole when in the ground (6 feet) not being taken into account in arriving at sweep, tightly stretch a tape line on the side of the pole where the sweep is greatest, from a point 6 feet from the butt to the upper surface at top, and having so done measure widest point from tape to surface of pole and if, for illustration, upon a 25 foot pole said widest point does not exceed 5 inches, said pole comes within the meaning of these specifications. Butt rot in the center including small ring rot outside of the center; total rot must not exceed 10 per cent. of the area of the butt. Butt rot of a character which plainly seriously impairs the strength of the pole above ground is a defect. Wind twist is not a defect unless very unsightly and exaggerated. Rough, large knots if sound and trimmed smooth are not a defect."

The Construction Material

WOOD POLES

Western or Idaho Cedar Poles

Western Red Cedar Association Specifications

"All poles must be cut from live, growing cedar timber, peeled, knots trimmed close, butts and tops sawed square, tops must be sound and must measure as follows in circumference:

4 in. top, 12 in. circ.	7 in. top, 22 in. circ.	9 in. top, 28 in. circ.
5 in. top, 15 in. circ.	8 in. top, 25 in. circ.	10 in. top, 31 in. circ.
6 in. top, 18½ in. circ.		

"No pole shall have more than one crook and this shall be one way only, the sweep not to exceed 1 inch to every 6 feet in length. Same to be determined in the following manner: Measurement for sweep shall be taken as follows: That part of the pole when in the ground (6 feet) not being taken into account in arriving at sweep, tightly stretch a tape line on the side of the pole where sweep is greatest, from a point 6 feet from butt to the upper surface at top, and having so done measure widest point from tape to surface of pole and if, for illustration, upon a 30-foot pole said widest point does not exceed 5 inches, said pole comes within the meaning of these specifications.

"Butt rot in center, including small ring rot, shall not exceed 10 per cent. of the area of the butt. Butt rot of a character which impairs the strength of the pole above ground is a defect.

"Large knots, if sound and trimmed smooth, are not a defect.

"A perfectly sound, dead or dry streak shall not be considered a defect when it does not materially impair the strength of the pole."

PEIRCE CROSS ARM BRACKETS

Hot Galvanized

The No. 107 bracket is used to run an extra wire on the end of a filled cross arm. Nos. 200, 221 and 300 are for taking off lamp or service connections. The No. 227 may be used as a "take off" bracket or for running an additional circuit below a filled cross arm. Nos. 100, 101, 103 and 105 are terminal brackets for dead-ending circuits on cross arms, the first two for telephone wires only. No. 104 is used by some companies to run jumper wires from end to end under arms. Nos. 106 and 229 are roof and ceiling brackets.

PEIRCE POLE BRACKETS

Hot Galvanized

The No. 308 is a pole bracket for secondary circuits for use instead of secondary racks. The No. 309 is for the same purpose, but brings the wires 14 inches out from center of pole. The No. 321 is used on poles in connection with spreader brackets on the arm for running wires from end to end of the arms. The hump fits over the head of the cross arm through bolts. The No. 109 is a pole bracket for heavy feeder wires.

Peirce Transposition Brackets

The brackets shown with "U" bolts are furnished with bolts bent for $3\frac{1}{4}$ x 4 inch arm unless otherwise specified, but can be furnished with bolts bent for any size up to 4 x 5 inches. The No. 115 Bracket bolts to the shank of a $\frac{1}{2}$ inch steel pin below the arm and is held by the pin nut. The No. 238 Bracket is for the transposition of telephone lines on routes with extremely long spaces between poles. Two brackets are needed for each "crossover."

Transposition Brackets

The No. 325 Transposition Bracket is designed to clamp over the cross arm and is held in place by means of a bolt and nut as shown in illustration. It is furnished with either $\frac{5}{8}$ or $\frac{1}{2}$ inch steel pin attached to the bracket by means of a nut. The pin may be easily replaced if damaged without removing the bracket. The bracket may be used with $3\frac{1}{4}$ or 3 inch cross arms. The No. 325 type Transposition Bracket is fastened by removing nut holding the ordinary W. U. steel pin in place and substituting bracket, or where wood pins are used, bracket may be attached by a $\frac{1}{2}$ inch carriage or machine bolt.

Peirce Secondary Racks

Hot Galvanized

Peirce Secondary Racks take the place of secondary cross arms. On them the party secondary circuits are strung with the wires in vertical instead of horizontal alignment, thus allowing the taking off of service wires without crossing of wires and without the aid of buck arms or spreader brackets.

The racks are made of open hearth steel hot galvanized. They may be safely used on wires or cables up to 500,000 circular mils. *They should be attached to the pole with two through bolts in center slots. The outside slots are provided to allow their fastening on buildings for supporting heavy power wires.

INSULATOR SPECIALTIES AND SHUTTER EYE

Style A

Style B

Holmes Tree Insulators

These insulators are made of malleable iron and furnished with double petticoat glass insulator. They are always in an upright position, regardless of the slant of the tree. The current cannot leak even if wire is bare. They can be quickly applied to tree without cutting the wire.

List No.	Style		*List Price Each
741713	A	Holmes Tree Insulator, $\frac{3}{4}$ in. hole, will take wire up to 2-0.....	\$0.68
741714	B	Holmes Tree Insulator, 1 in. hole, will take wire up to and including 4-0.....	1.08

Insulator Bracket

Insulator Bracket

Ajax Insulator Bracket

The new Ajax Insulator Bracket is made of malleable iron with lag screw in one piece and the insulator pin is made of a soft tough lead composition.

The comparatively soft insulator pin eliminates cracking the glass or porcelain insulator which is screwed over it. Where iron pins are used the expansion and contraction of the metal often results in cracking the glass or porcelain.

The lag screw used without expansion shield is adapted for use in wood house-walls, trees, poles, etc. and with the addition of a Diamond N Two-part Expansion Shield it makes a most secure attachment to brick, stone or concrete walls. Furnished in two diameters, $\frac{1}{2}$ inch and $\frac{3}{8}$ inch.

†List per 100

Diameter of Screw	-Galvanized-		-Black-	
	Without Shield	With Shield	Without Shield	With Shield
$\frac{1}{2}$ in.	\$30.40	\$37.60	\$26.00	\$32.00
$\frac{3}{8}$ in.	36.00	44.00	30.80	37.60

Diamond Expansion Shutter Eyes

Diamond Expansion Shutter Eyes

Furnished in different sizes for light and heavy shutters. The eye can be attached by iron worker without destroying the face of the wall inside or outside of the building, and without the use of cement or plaster.

List No.		†List Price per 100
741717	Diamond Expansion Shutter Eye.....	\$36.00

Line Construction Material

CONSTRUCTION MATERIAL

Steel Pole Gains

This device is a steel support for a cross arm, which saves cutting gains in the pole and obviates the necessity of cross arm braces except on longer than six-pin cross arms. It consists of two pieces, a curved steel plate adapted to embrace the pole, and a steel gain provided with projecting braces or tongues which pass through apertures in the pole plate. The pole plate, when drawn down into place by the bolt, not only conforms closely to the surface of the pole, but draws against the gain, providing sufficient spring tension to compensate for any shrinkage in the pole or cross arm. These gains act as a back brace and will resist a lateral strain, keeping the arm at right angles to the line. They are made of heavy Bessemer steel, and can be furnished either plain or galvanized.

CONSTRUCTION MATERIAL

Angle Iron Cable Arms

Can be furnished for supporting 2, 4, 6, and 8 strands. Each arm is complete with strand clamps and a pair of braces.

By counterboring slightly to clear bolt heads, a cross arm may be set in the lap of the angle arm. These strand clamps have heavy steel-forged yokes.

The 6 and 8 strand arms should be gained into the pole about half an inch.

No. 755

Pole Seats

Peirce Pole Seats

These seats in a competitive test held a dead load of 1740 lbs. without deflection. A $1\frac{1}{4}$ inch angle iron seat, weighing fifty per cent. more, collapsed with 960 lbs. load. The frames and braces of all styles are of $1 \times \frac{1}{2}$ inch channel steel. The wood seats are $1\frac{1}{4}$ inch cypress, boiled in creosote. The bars of the all steel seats are $\frac{3}{8}$ inch square steel let into the frame in such manner as to leave no projecting ends. There is no strain on the riveted joints. The bars are placed with corners up, to prevent slipping. They are shipped completely assembled in bundles of five.

*Delivery F. O. B. Pittsburgh, Pa. For warehouse deliveries write nearest house.

Pole Platform

Pole Platform

SECURITY TYPE

This type is intended for important points, and is therefore built strong in order to support several men at once. The guard rails go around the pole and fasten to it by lags. This makes the rail very staunch. For shipment, the platform and rail are wired to each other. All the braces, post, and lag screws are boxed and are complete. The dimensions of frame over all are 32 x 32 inches and wood floor is 27 x 32 inches.

List No.		Approximate Weight	†List Price Each
740563	Pole Platform, with railing	90 lbs.	\$29.00
740564	Pole Platform, without railing	62 lbs.	24.50

MATTHEWS SCRULIX ANCHORS

Earth Anchors

These anchors are screwed down into the solid ground without disturbing it. Each turn of the helix causes it to feed down into the ground and as it goes down the upper half again compresses the earth so that it is as solid above the anchor as around it.

All other types of ground anchors have moving parts which must be adjusted and which are frequently buried unadjusted, and they require a hole to be dug before installing. It is argued that this is wrong in principle because the filled hole of soft dirt above the anchor allows the rain and snow water to gradually soften the dirt and decrease the resistance of the earth above the anchor. The intermittent strains on the line have a tendency to raise the anchor up into this filled and softened earth. The results must necessarily be less satisfactory than with the Matthews Scrulix Anchor.

Matthews Scrulix Anchors are screwed into solid ground and afford the maximum of resistance to the upward pull of the guy lines.

Manufacturer absolutely guarantees the ungalvanized 5, 6 and 7 inch Matthews Scrulix Anchors to outlast any other anchors using galvanized steel rods of the same cross section, and they guarantee the ungalvanized 8, 10 and 12 inch Matthews Scrulix Anchors with square rods to outlast the same round section galvanized.

Twelve or more Matthews Scrulix Anchors and one No. 567 Wrench for their installation will be sent on thirty days' trial, charges prepaid, on the first order only. If unsatisfactory, they may be returned, freight charges collect.

Prices on rods include nuts, but not washers.

When ordering, specify plain or galvanized.

Harpoon Guy Anchors

Harpoon Guy Anchors are made of steel throughout. They are driven down with a sledge and set by a pull. One man can install a Harpoon Guy Anchor in ten minutes. No digging, boring, tamping or special tool is required. The wings open out in the undisturbed ground and will withstand any strain met in ordinary pole line service.

GUY ANCHORS AND ANCHOR RODS

Bierce Guy Anchors

"Bierce" Anchor

The "Bierce" Anchor works on the principle of the inverted wedge. It has exceptional holding power in dry sand or swampy soil. In a recent series of tests, the 8 inch size held over 16,000 pounds in clay and over 13,000 pounds in dry sand. It does away with expanding, screwing, driving or guessing. One man can bore hole with auger, set anchor and tamp it in fifteen minutes. It is made in one solid piece.

To install, bore a hole not less than five feet with an earth auger of same diameter as "Bierce" Anchor. Use $\frac{1}{2}$ inch, $\frac{3}{4}$ inch or $\frac{1}{2}$ inch anchor rods as desired for 8 inch size and 1 inch rods for 12 inch size. Drop the anchor into the hole with the point up. Tamp a quantity of broken stone or brick firmly around the anchor and it is ready to attach to the guy wire. The earth may be back filled loosely or tamped, as desired. We recommend the 8 inch anchor for a general purpose and the 12 inch for dead-ending line under heavy strain.

List No.	Diam.	Wgt. lbs. per 100	*List Price Each—

*F. O. B. Factory, Cincinnati, Ohio. For warehouse deliveries write nearest house.

NOTE: Prices do not include rods.

Adjustarods—Types A and B

Adjustarods are the only all in one metal equipments for "dead man" anchor installations. They have also the additional valuable advantage of turnbuckle properties, permitting slack in guy to be taken up at any time by merely applying a monkey wrench to the upper end of the rod.

Type A consists of a clamp, pulley, swivel, rod, washer and base nut.

Type B consists of eye, swivel, rod, washer and base nut.

Adjustarods are ordered as a unit and handled as such up to installation—no separate parts to forget or lose.

The rods of both types A and B are $\frac{5}{8}$ inch in diameter, and threaded 12 inches on lower end.

Ground Cone

Paragon Ground Cones

Are made of a perforated sheet of pure copper; cone is filled with pea-sized charcoal or coke; the charcoal absorbs moisture by keeping the earth around the cone always moist, insuring a permanent and perfect ground.

For telephone, telegraph, railroad, and trolley work it is ideal for grounding lightning arresters of all kinds, pole, cable, terminals, distributing, and protector frames, and all line arresters.

The cone is furnished complete with charcoal, and with braided hollow copper cable of 61,968 cm. cross-section, into which the ground wire may be soldered. The cable is securely soldered to the bottom of the cone.

MATTHEWS GUY CLAMPS

"Baby" Clamp

"Giant" Clamp

Matthews Boltless Guy Clamps

These clamps are made in two sizes, known as the "Baby" and the "Giant." The "Baby" is designed to fit $\frac{1}{4}$ and $\frac{5}{16}$ inch guy strand. The "Giant" is designed to fit $\frac{3}{8}$ and $\frac{1}{2}$ inch guy strand.

The Matthews "Baby" Boltless Guy Clamp will safely hold all strains on $\frac{1}{4}$ and $\frac{5}{16}$ inch guy strand. It is largely used for $\frac{5}{16}$ inch guy wire and by electric railway companies for holding $\frac{1}{4}$ inch trolley span wires.

Matthews "Giant" Boltless Guy Clamp is used for holding strains on $\frac{3}{8}$ inch, and $\frac{1}{2}$ inch guy strand.

These Clamps can be installed in less than 4 minutes and cost 21% less installed than ordinary 3-bolt clamps.

The greater the strain on the clamp the more they will hold. The wedge cannot be removed until the guys have been slacked.

List No.	Description	Approx. Wt. Per 100	*List Price Each		
			Less than 500	500 and less 1000	1000 or More
740510	"Baby" Clamp.....	40	\$0.20	\$0.20	\$0.16
740511	"Giant" Clamp.....	130	.30	.28	.26

NOTE: For Pacific Coast deliveries add 3 cents for the "Giant" Clamp and 1 cent to the "Baby" Clamp lists.

NOTE: Matthews Boltless Guy Clamps may be assorted with each other or with Matthews 2-Bolt Guy Clamp described below, to obtain the benefit of the quantity prices.

Showing Top

Showing Bottom

Matthews Two Bolt Guy Clamp

Next to Matthews Boltless Clamps described above this clamp is the easiest to install, and it is the strongest clamp made. It will break 16,000 lb. strand. This means that it will hold more than 5 ordinary 3-bolt clamps. For splicing messenger and for all other messenger and heavy guying it is the most economical clamp made. The four feet on the sides of one of the clamping plates prevent the guys from jumping out while slack is being taken up. The ear on this clamp is used for pulling the clamp to its final position while the clamping plates are still loose. This prevents the possibility of scraping off the galvanising on the strand and the nicking of the strand by misdirected hammer blows, which happens so often when 3-bolt clamps are installed. A chain lever is furnished for the purpose of pulling up the clamp.

List No.	Description	*List Price Each	
		Less than 1000	1000 and Over
740508	2-Bolt Guy Clamp.....	\$0.44	\$0.40

NOTE: For Pacific Coast deliveries add 7 cents to list.

Universal Messenger Clamp

These clamps are especially adapted for use on corners as well as straight work on account of the shape of the groove. The bolts are heavy and made from high-tensile stock, so that the messenger strand can be clamped securely at each plate.

Universal

List No.		*List Price Each
1	$\frac{1}{2}$ x 2 in., galvanized.....	\$0.75
2	$\frac{3}{8}$ x $1\frac{1}{2}$ in., galvanized.....	.69

Curve Block

Curve blocks are for easing strand around corners and curves. The same block can be used on an in or out curve.

EXPANSION BOLTS AND SAFETY CLAMPS

"Peirce" Expansion Bolt

Safety Clamps

Diamond Safety Clamps

The No. 1 Safety Clamp has an arm projecting above the clamped bolt so as to give increased hold by the additional drive-screw in the upper hole.

The No. 2 Clamp is furnished without the upper extension, and is used where crossarms or other obstruction may prevent the use of No. 1.

List No.		List Price per 100
1	Safety Clamp, galvanized	\$28.80
2	Safety Clamp, galvanized	21.60

MATTHEWS CABLE ACCESSORIES

Matthews Cable Clamp

No splice can be made in power cable that will be as good as the solid cable. The Matthews Cable Clamp is made to grip the cable so that the strain of it will be carried through the clamp to the crossarm and down the guy wire. This eliminates spliced joints at corner turns and where cable enters conduit of underground construction and at fuse junction poles where there are controlling switches. They also save all of the cable back of the splice. 75 per cent. to 85 per cent. can be saved on material by using Matthews Cable Clamps. They create no line loss.

A comparison of the old method and the Matthews method is shown above. The clamp is used on the corner at the left. Note the great waste of expensive cable where the old method is used at the right.

Matthews Cable Clamp is made in one size only to fit all cables from 3/0 to 2000000 C. M. It is not intended for use on lead covered cables.

List No.	Description	Wt. per 100	List Price Each		
740509	For all Cables larger than 00 up to and including 2000000 C. M.	425 lbs.	Less than 25	25 to 49	50 or more
	For galvanizing, add 10 cents per clamp to net prices.		\$2.20	\$2.10	\$2.00

The above prices are for points east of Pacific Coast States. For Pacific Coast points, add 9 cents to net prices.

TOGGLE BOLTS

Diamond Reversible Toggle Bolts

They are particularly designed for making quick and permanent fastenings to hollow tile, hollow cement blocks, walls constructed of expanded metal or wood lathes. Can be used with either the finished stove bolt head or the nut exposed or with loose ornamental cap nuts.

First: Insert round head of stove bolt through the grooves in sides of toggle and it is ready for use with the nut at the outside of the work.

Second: Insert the nut through slot in sides of toggle head and turn the thread of stove bolt into the nut. The toggle is then ready for use with a finished stove bolt head at the outside of the work exposed to view.

Third: Diamond toggles are also furnished with long threaded rods as listed below with loose ornamental brass or nickel plated on brass cap nuts, round, flat or acorn.

Crimper

Type "A"

Type "B"

Type "C"

Type "D"

Galvanized Aerial Cable Rings

Made of steel heavily and smoothly galvanized after forming. They are placed on the strand by a line-man, seated in a cable car or boatswain's chair.

A tool called a crimping plier is used to fasten them to the strand and the cable is then pulled into the suspended rings.

The inside diameter of ring should be from ½ to ¾ inch greater than the outside diameter of cable to be installed.

MATTHEWS CABLE SPLICING JOINTS

Splicing Joints

This device is designed to take the place of horizontal splices in multiconductor lead-covered cables, and is adapted particularly for underground manholes. The joint consists of three parts as shown in the illustration: "A," lead pot or sleeve, which is lined with galvanized iron to insure stability, and sweated to a threaded brass ring; "C," brass collar internally threaded to fit ring and tinned on upper edges; "B," lead gasket through which cables pass. In attaching, the cables are "wiped in" and the lead sleeve is screwed into the brass collar "C" by means of the spanner wrenches. The threads of ring "A" are well coated with red lead before screwing into collar "C." The completed splice is absolutely moistureproof, and is readily accessible for line tests or change in multiples. Any lineman can learn to make an absolutely moisture-proof cable joint after an hour's practice on the directions that are furnished with them, avoiding delay in case skilled cable splicers are not obtainable. Matthews Splicing Joints will save their cost in the reduction of maintenance expenses each year.

CABLE GRIPS

Universal Leather Collar Protector

Universal Single Eye Cable Grip

Universal Double Eye Cable Grip

Universal Double Eye Split Cable Grip

Universal Cable Grips

These cable grips are made in three different styles, as shown in illustrations. The single eye grip is used for attaching the pulling line to the end of the aerial or underground cable.

The double eye grip is designed for a luffing tool, to pull additional cable into a manhole after the single eye grip has been removed. It is invaluable for pulling out old underground cable, leaving it in the best of condition for future use.

The double eye split grip can be lashed on a working cable at any desired point, allowing slack to be pulled without interruption to the service. To determine size of Universal Cable Grips to order, refer to table of measurements.

Table of Measurements

Cable Grip Size	Cable Diameter, Inches	Cable Grip Size	Cable Diameter, Inches

FIBER CONDUIT

In the process of manufacturing fiber conduit, wet wood pulp or fiber is wrapped in a minutely thin film upon a forming mandrel, under pressure, until the desired thickness of wall is obtained. The individual fibers become felted and form a solid homogeneous wall. Taken off the mandrel, the wet pulp structure is subjected to a drying process, after which it is placed in a vat of liquid compound. This compound is a preservative and is also insulating and waterproofing. It thoroughly permeates the entire structure so that after treatment the wall of the conduit, when cut, presents a strong resemblance to hard rubber. The ends are cut in a lathe to make a socket joint, sleeve joint, or screw thread, as may be desired.

THE SLEEVE JOINT TYPE

The ends of each length are turned down to fit snugly in a sleeve by means of which a tight connection is made. The ends of the pipe are squared and faced.

List No.	Inside Dia., Ins.	Thickness of Wall, Ins.	Wt. per Ft., Lbs.	List Price per Ft.	List No.	Inside Dia., Ins.	Thickness of Wall, Ins.	Wt. per Ft., Lbs.	List Price per Ft.
740062	*1	$\frac{1}{4}$	0.40	\$0.195	740066	3	$\frac{1}{4}$	1.30	\$0.175
740063	1½	$\frac{1}{4}$	0.74	.155	740067	3½	$\frac{1}{4}$	2.50	.26
740064	2	$\frac{1}{4}$	0.90	.155	740068	4	$\frac{1}{2}$	3.20	.325
740065	2½	$\frac{1}{4}$	1.10	.165					

HARRINGTON JOINT TYPE

This type of joint is a modification of our sleeve joint and is made with a tapered end. Sleeves are tapered also, thereby allowing more swing to the conduit than can be secured by other types of joints. In this type the conduit does not butt, in consequence of which more flexibility may be had.

List No.	Inside Dia., Ins.	Thickness of Wall, Ins.	Wt. per Ft., Lbs.	List Price per Ft.	List No.	Inside Dia., Ins.	Thickness of Wall, Ins.	Wt. per Ft., Lbs.	List Price per Ft.

740070	2½	$\frac{1}{4}$	1.10	.155	740073	4	$\frac{1}{4}$	1.90	.195
740071	3	$\frac{1}{4}$	1.30	.165					

THE SCREW JOINT TYPE

This type of fiber conduit is manufactured with a slightly thicker wall than the socket joint type, owing to the necessity of securing a sufficiently heavy structure for carrying the thread that is cut on the ends of the pipe. The thread is "United States Standard"—four to the inch—and a coupling is provided for completing the joint. A liquid compound is furnished by the manufacturer to be wiped on the threads of the pipe when making the connection. This compound hardens and renders the joint watertight.

List No.	Inside Dia., Ins.	Thickness of Wall, Ins.	Wt. per Ft., Lbs.	List Price per Ft.	List No.	Inside Dia., Ins.	Thickness of Wall, Ins.	Wt. per Ft., Lbs.	List Price per Ft.

"LINADUCT"

"Linaduct" is designed as a form and insulating lining for concrete subways. This type of fiber conduit is made in five-foot lengths, diameters 2 to 3½ inches, $\frac{1}{4}$ inch walls. The sections are joined by a close fitting sleeve, quickly and easily adjusted to give good alignment and a sufficiently tight joint for the exclusion of concrete.

†Delivery F. O. B. Orangeburg, N. Y.

‡Includes one coupling to each length.

For warehouse deliveries, write nearest house.

FIBER CONDUIT (Cont'd.)

Fiber Conduit

THE SOCKET JOINT TYPE

Socket or mortise and tenon connections are automatically turned on the ends of each length, being $\frac{3}{8}$ inch long, slightly tapering, and uniform in size. This connection secures laying the conduit perfect in fit and alignment.

List No.	Inside Dia., Ins.	Thickness of Wall, Ins.	Wt. per Ft., Lbs.	†List Price per Ft.	List No.	Inside Dia., Ins.	Thickness of Wall, Ins.	Wt. per Ft., Lbs.	†List Price per Ft.

*Manufactured only on special order.

Fiber Conduit Bends

In producing these bends the conduit is first formed in the usual manner. When the wet pulp structure is removed from the mandrel it is bent on a special form to the radius and degree desired, after which it is dried and thoroughly saturated with an insulating and preservative compound. Special bends of short radii are mitered to give the degree and radii desired.

FIBER CONDUIT FITTINGS

Fiber Fittings

These fittings are made throughout of the same material as is used in the manufacture of fiber conduit and possess the same extremely high insulating qualities of that conduit.

In making these fittings the conduit is first formed and dried in the usual manner. It is then shaped into different forms of fittings, after which it is thoroughly saturated with the insulating and preservative compound.

Joints are then cut in a lathe to make a socket, sleeve or screw connection.

Junction Boxes

Fiber Junction Boxes can be used with either screw, sleeve or socket joint conduit. They are especially recommended for service connections and where it is necessary to light up private roads. These boxes are made two, three and four way. The inside dimensions are, approximately, 8 x 8 inches, and the weight is 16 pounds.

List No.	Junction Box, one to four openings	List Price Each
741706	Junction Box, one to four openings	\$7.13

Always specify number of openings wanted, and type of conduit with which junction box is to be used.

†Delivery F. O. B. Orangeburg, N. Y. For warehouse deliveries, write nearest house.

Line Construction Material

VITRIFIED CLAY CONDUIT

This conduit is made of the purest fire-clay, salt glazed, and guaranteed to comply rigidly with the American Telephone and Telegraph Company's specifications. We inspect all conduit as it is loaded. Conduit is manufactured in all standard sizes and designs, and includes some special economic forms.

Single Duct Conduit: May be obtained in either of two forms; the square or round duct. The square duct single is heavier and has no real advantage over the round duct single. The round duct is now the popular single duct conduit. Its weight is much less, thus saving on freight. It is especially efficient in building up trunk lines, the beveled corners allowing square interstices between the pieces, thus forming an additional concrete support, and insuring good alignment before and after cable pulling.

Two-way and Three-way Multiple Conduit can only be manufactured in 2 foot lengths, and is designed for building up trunk lines to the desired capacity of laying singly in the trench for terminal and lateral construction.

VITRIFIED CLAY CONDUIT

Is the most satisfactory conduit made, strong in the web, straight in line, smooth in the duct, and flat on the ends. This ware is the most economical per duct foot to lay in the trench.

Style	Length of Piece, Feet	Duct Feet in Piece, Feet	Weight per Duct Foot	Duct Diameter Inches	Duct Feet Minimum Cor.	Price per Duct Foot
Square Duct, Single.....	1.5	1.5	10	3½	4278	\$0.09
Round Duct, Single.....	1.5	1.5	8	3½	5000	.09
2-Way Multiple.....	2	4	8	3¾	6250	.09
3-Way Multiple.....	2	6	8	3¾	6250	.09
4-Way Multiple.....	3	12	7.50	3¾	7800	.09
6-Way Multiple.....	3	18	7.50	3¾	7800	.09
9-Way Multiple.....	3	27	7.50	3¾	7800	.09

STANDARD WOODEN CONDUIT

This pine "pump-log duct" is largely used by telephone companies with underground lead-covered cable; it is creosoted, and, therefore, there is no limit to its life; the price is moderate, freight is low, breakage is very slight, cost of laying is low; dimensions, square, 4½ x 4½ inches outside; hole, 3 inches.

Prices on application.

POLE DINKEYS AND REEL WHEELS

No. 306 Dicke's Heavy Pole Dinkey

Dicke's Light Pole Dinkey

A strongly built truck, especially useful for handling poles which are to be set in places that cannot be reached with a team. One man can easily handle the heaviest pole with this truck.

The woodwork is of seasoned oak, and the wheels Sarven patent, 2 feet 8 inches high, with 16 $1\frac{1}{2}$ inch spokes. The tires are $2\frac{1}{2}$ x $\frac{1}{4}$ inch, bearings 8 inches long, axles $1\frac{3}{4}$ inches, truck $32\frac{1}{2}$ inches. The entire dinkey is painted one coat before assembling and two coats afterward.

List No.	Mfr. No.		Weight Lbs.	*List Price Each
760186	305	Dicke's Light Pole Dinkey	165	\$50.00

Dicke's Heavy Pole Dinkey

A very strongly built dinkey that is indispensable to telegraph and telephone companies who handle large poles. The top of the carrying frame is provided with heavy pikes and is ironed with iron $3\frac{1}{2}$ x $\frac{1}{4}$ inches. The bottom is cross-braced with steel $1\frac{1}{4}$ x $\frac{1}{4}$ inches. The woodwork is of seasoned oak and the wheels heavy truck 25 inches in diameter, with 14 spokes $1\frac{1}{4}$ x $1\frac{1}{4}$ inches. The tires are 4 x $\frac{1}{2}$ inches, wheel boxes of soft iron $9\frac{1}{2}$ x 3 inches. Hubs 8 inches in diameter, $11\frac{1}{4}$ inches long. The axles are $1\frac{1}{2}$ inches, truck 38 inches. The entire dinkey is painted one coat before assembling, and two coats afterward.

Improved Take-up Reel

No. 4608-2

Klein's Improved Take-up Reels

Take-up Reel, seasoned oak. All braces bolted through. One-inch lathe-turned axle. Removable side piece on spool to allow the coiled wire to be unloaded. The turned axle makes the reel light running. The unloading feature makes it economical in time. And in addition to being so well constructed, the improved take-up reel has a separate guard piece slipped on shaft and fastened with a flat key, allowing wire to be removed quickly and easily.

Best of all, they don't cost more than old style reels.

CONSTRUCTION TOOLS

Adjustable

No. 2000-30. Cable Roller

Ratchet Adjustable Cable Reel Stand

In the ratchet reel stands the frame is made of one-inch angle iron, brace of 1 x 1/4 inch steel bars. Size of screw, 2 inches. Length of screw, 12 inches. Height of stand, only 16 inches. Height of stand to bearing point in yoke, 20 inches. Length of base, 27 inches. Width of base, 12 inches. Weight of stand, 58 lbs.

List No.		List Price per Pair
761538	Ratchet adjustable cable reel, without wood base.....	\$60.00

"Matlock" Cable Roller

This cable roller frame is of forged mild steel. The maple roller has a metal bushing extending beyond each end. This prevents the wear on the roller and keeps it in the centre of the frame.

List No.	Mfr. No.	Weight Lbs.	List Price
761119	2000-30	4 1/2	\$3.00

Manhole Skids and Sheaves

A tool for leading the pulling line from the mouth of the duct to the capstan. The skids have pin holes every three inches from top to bottom so that the sheaves can be moved any place desired in the skid. Nine foot sets furnished unless otherwise ordered.

List No.		List Price Each
760174	Nine-foot skids, per set.....	\$52.70
760175	Price for additional lengths, per foot.....	2.64

Empire Duct Rods

Empire Duct Rods

These rods are constructed of malleable iron machined to a perfect fit so that side or end play is avoided. The wooden rod is of the best selected straight-grained well-seasoned hickory, and is expanded in the end of the iron coupling by means of a wedge which makes it impossible to pull out.

The rods are made in two styles, without wheels and with wheels. In the wheel type the wheels are so staggered that if one axle should come in contact with an obstruction on one side of the duct the other side will remain free.

With Wheels			Without Wheels

CABLE ROLLERS AND CARS

"Bierce" Cable Roller—Closed

"Bierce" Cable Roller—Open

"Bierce" Cable Roller

The "Bierce" cable roller is practically non-breakable, the frame being made of forged steel and the roller of cast iron, supported and protected on both sides by pressed steel disks, which insure the roller from injury as well as the cable, and at the same time prevent the cable or rope from catching when being pulled over the roller.

The hinged member, when thrown back, allows ample opening for the easy removal of the frame from the messenger wire and cable after the cable has been drawn and tied up in position.

The clamping device, being mounted upon the hinged member, allows the frame to be rigidly clamped in position without placing any side strain upon the messenger wire.

The construction of the frame is so arranged as to allow it to hang safely from the messenger wire before the clamp is tightened. An oil hole is provided in the roller for oiling the axle.

List No.	Weight Lbs.	List Price Each	Each Galvd.
760191 Bierce Cable Roller.....	7½	\$3.50	\$4.00

Cable Car No. 1

Cable Car No. 3

Security Messenger Cable Cars

Cable Car No. 1 is a combined seat and table. The framework of the car is continuous, without joints, except for one elbow at each roller on the hook side, where it carries no weight. The rollers are of malleable iron, thin and light, but very strong. The seat is of wood with dovetail at each end, and its adjustable feature makes it fit any lineman and any kind of work. The table holds tools and materials.

Car No. 3 is not equipped with table, but is intended for use with a lineman's safety belt, which can easily be adjusted for height.

LINEMEN'S TOOLS

Quick Samson Grip

Quick Samson Trolley Wire Grip

Strand or Messenger Wire Grips

The grip consists of a body or retaining piece in which two steel wedge shape jaws move longitudinally. These jaws are arranged so as to move in either direction simultaneously, thus opening or closing them in unison. The gripping surface of the jaws is concave, and is provided with a series of milled teeth, spread over their entire length. These teeth grip into the spirals of the strand, and being uniformly distributed over the entire length of the jaw, grip the wire at very many points, thus taking a secure hold with the pressure distributed along the entire length of the gripping surface, so that no amount of strain falls sufficiently at one point to crush or injure the wire. The tackle is attached to the two oblong rings in the body piece; these rings being arranged central, insure a straight pull. The proportions of the various parts are calculated to carry any strain that is necessary to tighten the wire and the jaws are self adjusting. Made in the following sizes:

List No.			Weight Lbs.	List Price
			Each	Each
1618-20	For $\frac{1}{4}$ to $\frac{3}{8}$ in. strand, gripping surface 7 in.....		8	\$16.00

Yale Triplex Blocks**"Yale" Triplex Blocks**

From Hook to Hook a Line of Steel

Capacity $\frac{1}{4}$ to 20 Tons

"Yale" Triplex Blocks are rated on a capacity basis of a long ton 2240 lbs. and each block is tested at the factory with a 50 per cent. overload of 3360 lbs. for each rated ton. Every detail in Yale Hoists is the result of careful research in the factory laboratory and the most severe tests under service conditions. Its independent automatic load-sustaining device, operated entirely separate from its lifting mechanism, admits of 80 per cent. of the power exerted by a man pulling on the hand chain being transformed into actual lifting energy.

"Yale" steel safety hooks, steel suspension members and Yale steel chain are some of the exclusive features of these blocks introduced to safeguard operators and loads.

The blocks are so planned that all capacities are made up of the four basic sizes, namely: $\frac{1}{4}$, 1, $1\frac{1}{2}$ and 2 ton. This simplifies the renewal of parts; for example, the 2 ton parts fit all sizes 4 tons and larger.

List Prices and Data

List No.	Capacity in Tons	Net Weight	List Price Complete Block with Std. Hoist	Std. Hoist in Feet	List Price Extra Hoist per Foot
761856	$\frac{1}{4}$	58 lbs.	\$56.00	8	\$1.44

"YALE" ELECTRIC HOISTS

"Yale" Electric Hoist, "KY" Type

"Yale" Electric Triplex Hoist

"Yale" Electric Triplex Trolley Hoist

"Yale" Electric Hoist "KY" Type

Electric hoists give from five to ten times the speed of hand hoists and their cost is only a fractional part of electric traveling cranes. The weight of Yale Hoists is distributed so that each machine balances and swivels on the single top hook. The load is carried by steel suspension plates. Both direct and alternating current hoists can be supplied.

List No.	Capacity in Tons	Size Motors	Parts Hoisting Rope	Lift in Feet		List Price Standard Lift

Above prices for direct current plain control.

"Yale" Electric Triplex Hoist

Where any quantity of material from 50 to 4000 pounds has to be repeatedly lifted and lowered, as in serving machine tools, this is the hoist to use.

Capacity	Dimensions			Standard Lift	Weight	List No.	List Price Hoist with Standard Lift Direct Current	List No.	List Price

The 1 and 2 ton hoist for direct current service can be furnished with a variable speed controller at an additional list price of \$38.40.

"Yale" Electric Triplex Trolley Hoist

This type of hoist is designed for close head room. This hoist is a little wider than the hoist with the top hook, and it is necessary to have wider switches in the overhead track than those with the regular hoist with top hook.

Capacity	Standard Size of I-Beam	Dimensions			Weight	List No.	List Price Hoist with 10-foot Lift Direct Current	List No.	List Price

WIREMEN'S TOOLS

Laurent Cherry Block

No. 300 Dicke Messenger Clamp

Laurent Cherry Pulley Block

This pulley block is specially recommended where heavy pulling is necessary, drawing cables, tightening guy wires, stretching messenger cable, etc. One man can tighten a heavy back guy with a No. 4, while two men can stretch a heavy messenger cable with a No. 6. It is an ideal tool for the lineman. It never slips, pulls powerfully and is convenient in any position. The No. 6 size pulls or lifts two tons; the No. 4 size pulls or lifts three-quarters of a ton.

KLEIN'S SPLICING CLAMPS

The splicing clamp is one of the most important tools in the lineman's kit, and as electrically and mechanically good joints are of the most importance in a line, it is evident that the tools selected to do this work should have careful consideration. The following illustrations show our different styles and the sizes of wire for which they are fitted. The handles have a spring temper and will not bend out of shape after being closed on the wire.

RUBBER GLOVES

Pure Rubber Gloves

Seamless Glove—Unlined

The seamless type gloves are made of red rubber. Only the best selected pure fine Para rubber is used in their manufacture. Being seamless, they have no imperfection on account of laps or joints. They are easily cleaned or dried by turning, as they have no fabric or lining to interfere. They are flexible and serviceable, while the safety is measured by the tests to which each pair is subjected before leaving the factory.

The sizes are standard rubber glove sizes and compare with Nos. 14 and 15 of the coated seam glove. The standard weights are tested for about 4,000 volts, heavy weights about 10,000 volts. The heavy palm have the standard weight gauntlet, but palm of this glove is tested for about 10,000 volts. Length, 11 to 15 inches.

Without Gauntlet

With Gauntlet

Rubber Gloves, Cloth Lined

Palm and Fingers Reinforced

The seam rubber glove is made from selected rubber and is cloth lined. The heavy weight gloves listed below are subjected to a test of 9,000 volts before leaving factory. To determine size required, measure hand around knuckles, and then add 6 inches to measurement; i.e., if hand should measure 8 inches, order size No. 14 for close fit, or No. 15 for loose fit.

MISCELLANEOUS MATERIAL

Hip Boot

Storm King Boot

All Gum Boot

Rubber Boots

Boots. Boots fitted too big will wrinkle badly and prove unsatisfactory.

Boot Linings. As between the felt or wool lining our recommendation is the net for warmth, comfort, and general hygienic reasons, whether the boot is of heavy or light-weight construction.

Milk. Milk left to dry on rubber boots will rot them.

Heat. Heat will ruin any rubber.

Oil. Oil will destroy any rubber.

Sun. Rubber footwear left in the sun will dry up and be ruined.

Linemen's Shield

Marshall's Linemen's Shield

This is a patented device to protect linemen when working on high-tension lines. It is made of rubber varying in thickness from $\frac{3}{4}$ inch, where it is subjected to pressure, to $\frac{1}{4}$ inch along the flaps. Its shape is such that when the shield is in place no "live" part of the circuit is within danger range of the lineman. A hard rubber ring, slotted with an opening sufficiently large to admit the wires, serves to clamp the shield securely to the wire. Each shield is subjected to a submerged test of 30,000 volts before shipment. The shield is applied in a large variety of positions. I.e.: It fits over the insulator. To place it, the lineman grips it by the rubber handle attached to the outside so that the shield is between his hands and the wire. This device is recommended for use on circuits not to exceed 10,000 volts.

Klein's Pole Climbers

List No.		Length	Weight per Pair.	List Price per Pair
1900	Eastern—without straps, riveted strap loops.....	15 to 18 in.	3 3/4 lbs.	\$4.50
1903	Special light weight Eastern riveted loops—without straps	15 to 16 1/2 in.	2 3/4 lbs.	4.50
1901	Eastern—without straps, punched strap loops.....	15 to 18 in.	3 3/8 lbs.	4.00
1902	Western—without straps.....	15 to 18 in.	2 3/8 lbs.	3.50

NOTE: When ordering climbers, always specify length wanted by half inch variation.

The steel in Linemen's Eastern Pattern Climbers is made to special order of a springy, durable quality, forged to the right thicknesses for safety and lightness. The gafts are of tool steel set into the shank and never loosen. When worn down, however, they can be removed and new gafts set in place.

The lines of form make them well fitting and comfortable.

Quality and workmanship is the best in either. The only difference is in the loop through which the straps pass. The No. 381 and No. 381L have the loops riveted into the shank, while in the No. 382 they are punched out of the metal of the shank. No. 381L is the pattern of No. 381, but made lighter than the standard weight.

If straps are wanted with climbers, mention it in the order. We never send straps unless it is mentioned.

Inspector's Leather Tool Bag, Harness Leather

This bag is a combination of all the good features of the various common leather bags. It is made of harness leather and will stand rough and hard usage and still always look well. It has a shoulder strap combined with a pad and hand strap; also a saw and bit holder. The bottom is three ply and is studded with steel studs. Retaining straps pass clear around the bag so that it may be loaded to the limit of its capacity and be securely held intact. All seams are sewed with hot waxed linen thread, lock stitched. The leather used does not absorb moisture.

KENNEDY ALL-STEEL TOOL KITS

These kits are made of prepared steel, but are no heavier than other bags or tool kits, their average weight being between 5 and 11 pounds, depending on size.

They are built to stand the wear and tear of hardest usage, being reinforced throughout, and fitted with brass side catches, strong two-tumbler Corbin locks, steel leather-covered handles, so riveted that they cannot pull out, and are protected by solid corner irons.

Finished in a durable baked enamel of brown or black, they present an appearance neat and attractive, and look like leather traveling bags or suit cases. Disappearing and waterproof hinges give smooth carrying surface with no rivets showing. Material, special construction, and overlapping features make these kits waterproof, fire, oil and weatherproof. These kits are also thief-proof because they can be locked, chained if desired, and cannot be cut open. Heavy material can be carried without buckling or changing shape of bag. There is no strain on hinges or locks as entire weight is on body of bag. Double seamed, electric welded and reinforced throughout.

Standard Electrician's Cases

These cases are designed for and meet all the requirements of an electrician's tool kit. They have the necessary length, together with compactness and proper spacing for carrying the average equipment. They have a divided spacing at one end for blowtorch and ledge rests at top of grip for tray to carry drills, bits, small parts, etc., if desired. They have ample space at bottom for heavy tools, material, etc. In addition to leather handle, they are fitted with loops at each end for straps to pass under the case and over the shoulder for carrying heavy loads in this manner if desired. Furnished with or without tray.

YANKEE TOOLS

No. 41 Automatic Drill

No. 44 Automatic Drill

Automatic Drills

The No. 41 automatic drill is equipped with eight drill points $\frac{1}{16}$ to $\frac{1}{8}$ inch, which are in plain sight when magazine is open. During the return movement of handle the drill point revolves backward to clear chips, etc. Length of tool, inclusive of drill points, $11\frac{3}{4}$ inches.

The No. 44 automatic drill has spring with adjustable tension. The cap on top of drill has a screw attached to it, by revolving which the spring is made longer or shorter, and as a result weaker or stronger. The spring is held at any desired tension by a small bolt engaging in cap and operated by the small knob on side of handle. The drill has eight drill points, $\frac{1}{16}$ to $\frac{1}{8}$ inch, in magazine in handle. Length of tool, inclusive of drill points, $11\frac{3}{4}$ inches.

Yankee Plain Screw Drivers

No. 90 Standard Style

No. 95 Cabinet Style

Yankee plain screw drivers are strong, durable, well balanced tools of high quality, material and workmanship. The fastenings of blade and handle are such that they cannot be loosened in use, or even the usual abuse. The blades and ferrules are finely polished, the handle of hard wood finished in dull dead black, making a handsome as well as durable appearance. Each screw driver is subjected to a thorough and hard test at factory.

No. 75 Yankee Push Brace

Yankee Push Brace

Is made to hold all the small tools used in a bit brace, but is operated by pushing the handle to revolve the tools in same manner as a spiral ratchet screw driver. It will with little effort bore $\frac{1}{4}$ inch holes in metal, drive $\frac{3}{8}$ inch auger bit in hard wood, or $\frac{1}{2}$ inch to $\frac{3}{8}$ inch bits in white pine. It can be used for tapping holes, and with socket wrench drive in small lag screws, run burrs or nuts on bolts, also used with screw driver bit, etc. Being straight and cylindrical and operated by pushing, it can reach into many places in corners, holes back of obstructions, where a brace can not be operated. The spiral rod is of steel, grooved for both right and left hand with extra long nuts of hard bronze, to secure extra durability. The chuck is made of malleable iron, polished and nickel plated. The jaws are of steel, drop forged and hardened. The chuck will hold squares up to $\frac{1}{2}$ inch wood bit. The handle is $2\frac{3}{8}$ inches in diameter, of hard wood, polished. The entire length of tool, without bit, when closed, is $16\frac{1}{4}$ inches; when extended, $23\frac{1}{2}$ inches.

HAND AND BREAST DRILLS

No. 1530 Hand Drill

"Yankee" Hand Drill

The frame is malleable iron, finished in dead black color. The chuck body is steel, polished and nickel plated. The jaws are of steel, drop forged and hardened. The spindle is of steel and gears are cast iron with cut teeth. Particular attention is called to the little slide on cylinder between gears and the notches. With slide in first notch (at top), it is a plain drill; in second, a left-hand ratchet; in third, a right-hand ratchet; in fourth, a double ratchet, where any movement of crank, forward or backward, causes the drill to cut continuously; in fifth (at bottom), gearing, etc., is locked to open or close chuck.

CONCRETE AND STONE DRILLS

Diamond Rapid Fire Drill

This is a hand-operated hammer drill that will greatly reduce the cost of drilling holes in concrete, brick and stones. The construction of the drill is such that no uncomfortable vibration is felt by the operator and a greater amount of work is done with less effort than with hand hammer and drill.

List No. 761539 Diamond "Rapid Fire" drills (without points)..... *List Price Each \$24.00

STEEL DRILLS

Extension Drills

SebcO Extension Drills FOR BRICK AND STONE

These drill heads are designed with the view of increasing efficiency and decreasing cost of time and energy. The quicker, neater, and easier a job is done the more satisfactory and cheaper is the cost of the work. For drilling deep holes in brick and plaster they are very convenient to use. The heads are made of best steel, carefully tempered. A piece of gas or water pipe may be used as a handle, making it any length desired. One piece of gas pipe will fit six different sizes of drill heads. When the job is completed, unscrew the head and throw the handle aside. SebcO drills never break nor crumble brick; they drill a hole clean and smooth and do not bind.

Hammer Drill

$\frac{1}{2}$ x 4" Drill Point

$\frac{1}{2}$ x 6" Drill Point

Peirce Hammer Drill

This tool offers the one quick means of drilling holes easily in brick, stone and concrete. It takes various sizes of drill points, which are quickly removed for sharpening. The guard on chuck has been enlarged to better protect the hand. The collar is welded to rod instead of being brazed. The dumb-bell is made of malleable iron.

MISCELLANEOUS VISES

Diamond Multiple Action Vise
Figure 378 Patent Applied For**"Trident" Drill Press Combination and Multi-Vise**

A combination tool, consisting of a drill press, vise, anvil and cutting hardy, with other special attachments.

Drill Press: Double acting hand power drill press, taking all sizes of standard square tapered shank drills up to 1 inch. The drilling device is independent and entirely removable without interfering with the functions of the vise.

Vise: The vise has an opening of about 8 inches; width of jaws, $3\frac{1}{2}$ inches, and has wrought steel jaws. The extreme top of the jaw is about 8 inches from the bench.

Anvil: Hardened surface, $3\frac{1}{2} \times 6\frac{1}{2}$ inches, 5 inches high, with regulation horn and wrought steel cutting hardy.

Lathe: The opening in the stationary jaw is square and tapered, corresponding to the opening in the revolving socket.

In this combination tool the action of the vise being entirely independent of the drill press, the work to be drilled can be securely held in place between the jaws of the vise while being drilled.

All parts are removable and can be instantly replaced in case of accident.

List No.		Approximate Weight	*List Price Each

Each

760784 Will bend pipe or conduit up to one in. without splitting or kinking. Will fit a Crane No. 1 pipe vise, also No. 2 Crane, and No. 21 vises; weight 3 lbs..... \$2.50

Elbow Former

Fullman Elbow Former

Instead of carrying the work back and forth to a bench for slight changes, the bender is applied to the spot as the work progresses. Is advantageous in fitting conduits neatly around other work—making offsets, curves, etc., after conduits are in place. The two forms enable the workmen to reach any part of the work—the 45° form being especially useful for reaching under walls and out-of-the-way places.

Unlike the old style gas "T" form of bender, this tool can be applied anywhere without having to slide it over the pipe from one end.

The Handy Die Stock

The Handy Die Stock is a substantially built, long-lived, economical pipe threading tool. It is very light in weight, easy to carry, and takes very little room in tool chest or kit. It is regularly furnished with right-hand dies. Left-hand dies can be furnished for all sizes; these sets are self-contained, threading with one set of dies sizes given below. They are self-locking, and quickly released, one turn back to clean the thread, throw off the lever and remove the die stock. The cutting bits are all made from the best crucible steel adapted to pipe threading.

No. 25 Nye Die Stock

No. 25 Nye Die Stock

This is an adjustable die stock equipped with two sets of chasers which thread sizes from one-eighth to one inch inclusive. The chasers are tapped on both ends and can readily be changed in the stock. They cannot work loose or recede while in operation. An important feature of this die stock is after the thread is cut the chasers can be instantly released, thereby avoiding the necessity of backing off over the work. Absolutely no bearing or parts to wear out. It is also equipped with adjustable bushings, which can be opened wide enough to go over a coupling. Cuts over and under size or a running thread.

List No.		*List Price Each
760797	With one set of chasers threading from $\frac{1}{8}$ to $\frac{3}{4}$ inch inclusive.....	\$18.00
760798	With two sets of chasers threading from $\frac{1}{8}$ to 1 inch inclusive.....	23.00

C. & L. TORCHES

FOR GASOLINE AND KEROSENE

Nos. 32 and 31 Gasoline Torches (Qt. Size)

No. 32 Torch

No. 31 Torch

List No.	Shpg. Wt.	Price Each
32 With hook and support for soldering copper	5 lbs.	\$7.34
31 Without hook and support for soldering copper	5 lbs.	7.00

The burner is made of special generator metal which holds the heat longer. The gas is super-heated before it is burned, producing a perfect fire indoors or out, in wind or extreme cold. A steady, perfect blue flame is generated by this powerful burner, using very little gasoline.

No. 17 Torch

No. 29 Torch

Nos. 17 and 16 Gasoline Torches (Qt. Size)

17 With hook and support for soldering copper	5 1/4 lbs.	\$7.00
16 Without hook and support for soldering copper	5 lbs.	6.68

A good pump in handle torch. Fitted with patented brass automatic pump with double springs on check valve. An air tube leads from bottom of pump to top of tank which prevents gasoline escaping through the pump should check valve refuse to work. The burner produces an ideal blue flame of intense heat.

No. 108 Torch

No. 107 Torch

Nos. 30 and 29 Gasoline Torches (Qt. Size)

30 With hook and support for soldering copper	4 1/4 lbs.	\$6.34
29 Without hook and support for soldering copper	4 1/4 lbs.	6.00

Has automatic pump in handle. Burner is of the open type and the gas is super-heated before it is burned, producing an intensely hot, well-controlled flame. An excellent torch for indoor work.

Nos. 108 & 107 Gasoline Torches (Qt. Size)

108 With hook and support for soldering copper	5 1/4 lbs.	\$5.68
107 Without hook and support for soldering copper	5 lbs.	5.34

This meets the demand for a cheaper quart torch. It has a good burner mounted in the center of the tank, and while it will not produce as much heat as the better grade torches, it is well worth the price and will give satisfaction.

No. 104 Torch

No. 103 Torch

Nos. 104 & 103 Gasoline Torches (Qt. Size)

104 With hook and support for soldering copper	5 1/4 lbs.	\$6.00
103 Without hook and support for soldering copper	5 lbs.	5.68

Patented automatic pump with double spring automatic check valve is fitted in the tank.

No. 96 Torch

No. 95 Torch

No. 96 Torch for Kerosene (Quart Size)

96 Without soldering copper attachment	6 1/4 lbs.	\$6.68
--	------------	--------

A strictly high-grade kerosene torch, producing an intensely hot blue flame about six inches long. All parts are easily accessible and can be cleaned. The improved construction of the burner and perfect combustion of the fuel practically eliminates carbon deposit. The ideal torch where insurance restrictions forbid the use of gasoline. Not affected by severe weather conditions.

No. 95 Torch for Kerosene (Pint Size)

95 Without soldering copper attachment	5 1/4 lbs.	\$6.00
--	------------	--------

No. 95 torch is exactly like No. 96, but pint size.

No. 112 Torch for Gasoline (Quart Size)

112 With detachable soldering copper holder	5 lbs.	\$5.00
---	--------	--------

A very good torch for the price. The burner is made of bronze metal, with metal wheel handle and heavy stuffing box on needle, which prevents leakage. The tank is made of heavy brass and produces a steady flame of intense heat.

No. 114 Torch for Gasoline (Pint Size)

114 With detachable soldering copper holder	3 3/4 lbs.	\$4.40
---	------------	--------

The No. 114 is similar to No. 112, except pint size. Same style of pump and detachable soldering iron attachment as shown in cut.

No. 112 Torch

No. 114 Torch

Tools and Construction Appliances

**C. & L. TORCHES
FOR GASOLINE AND ALCOHOL**

Nos. 38 and 37 Gasoline Torches (Pt. Size)

No. 38 Torch

No. 37 Torch

List No.	Shpg. Wt.	Price Each
38 With hook and support for soldering copper	3 3/4 lbs.	\$6.48
37 Without hook and support for soldering copper	3 1/4 lbs.	6.14

A high-grade pint size torch with an improved burner of special generator metal which produces a perfect blue flame of intense heat indoors or out. Hook and support for holding soldering copper is a great convenience for repair work. Heavy gauge seamless drawn brass tank is fitted with automatic brass pump with automatic check valve, insuring ample air pressure.

Nos. 19 and 18 Gasoline Torches (Pt. Size)

No. 19 Torch

No. 18 Torch

19 With hook and support for soldering copper	3 3/4 lbs.	\$6.00
18 Without hook and support for soldering copper	3 1/4 lbs.	5.68

Equipped with patented automatic brass air pump in handle and special generator metal burner. Light, but strong, and easily handled in close work. An air tube is attached to the inside of the lower handle casting through which the air pressure is taken to the top of the tank. A very popular pint torch.

Nos. 102 & 101 Gasoline Torches (Pt. Size)

No. 102 Torch

No. 101 Torch

102 With hook and support for soldering copper	3 3/4 lbs.	\$6.00
101 Without hook and support for soldering copper	3 1/4 lbs.	5.68

One of the best pint size torches, strictly first-class in construction, material and workmanship. Fitted with open type burner made of high-grade generator metal, producing a perfect blue flame of intense heat, using very little gasoline. Tank is fitted with automatic brass pump with double springs.

No. 106 Torch for Gasoline (Pint Size)

No. 106 Torch

No. 110 Torch

106 With detachable soldering copper holder...	3 3/4 lbs.	\$5.34
--	------------	--------

A high-grade torch that will give good satisfaction. The burner is made of generator metal, producing a steady blue flame of intense heat and will work well indoors or outside. It is fitted with automatic brass pump with double spring check valve which easily and quickly supplies all needed air pressure.

No. 110 Torch for Gasoline (Pint Size)

No. 48 Torch

No. 47 Torch

110 With detachable soldering copper holder...	3 3/4 lbs.	\$5.68
--	------------	--------

The No. 110 is similar to No. 106 with the exception of pump, which is in the tank, and metal wheel on needle.

Nos. 48 and 47 Gasoline Torches (Pt. Size)

48 With soldering copper attachment.....	5 1/4 lbs.	\$7.54
47 Without soldering copper attachment.....	4 3/4 lbs.	7.20

Fitted with a special burner which is light, yet sufficient / powerful to generate a flame for all requirements. The pump, which forms part of the handle is automatic.

No. 10 Torch for Alcohol

10 Torch. Size, 1 1/4 x 6 inches.....	1 lb.	\$3.00
---------------------------------------	-------	--------

The No. 10 is a blow-pipe torch. Air blast produces a hot blue flame. Evaporation of fuel prevented by screw-cap over wick. Air blast tube is adjustable. Nickeled.

No. 14 Torch for Alcohol or Gasoline

14 Torch. Size, 1 1/4 x 6 1/2 inches.....	1 lb.	\$3.54
---	-------	--------

The No. 14 burns alcohol or gasoline. Air blast through full chambers makes hotter flame than other methods. Nickeled.

No. 28 Torch for Alcohol

28 Torch. Size 1 1/4 x 7 1/4 inches.....	1 lb.	\$2.00
--	-------	--------

A torch or blow pipe for electricians for producing a fine concentrated flame. Finish brass, nickeled.

No. 10

No. 28

Alcohol Torches

No. 14

ACETYLENE SOLDERING AND BRAZING OUTFITS

In the electrical trade, the uses for the Prest-O-Soldering Iron and the Prest-O-Torch are almost without number.

For soldering wire connections on switchboards, all kinds of shop work, overhead wire work, etc., the Prest-O-Soldering Iron saves valuable time, labor and operating costs as well. The heating flame burns inside the copper head of the iron, maintaining an even temperature, and will not blow out in high winds. Ideal for work in cramped quarters.

The Prest-O-Torch (Style A, B and C) is a blow torch, providing an intense heat in a concentrated flame. Very handy, instantly available and also economical.

Prest-O-Soldering Iron

Extensively used for soldering and brazing work by telephone and electric light repairmen, plumbers and tinnerns, automobile and motorcycle repairmen, engineering houses, etc. The Style A Prest-O-Torch may be connected to an MC Prest-O-Lite and fitted with bands and a handle for overhead work, or it may be fitted with a hook for hanging on a crossarm.

If either Prest-O-Soldering Iron or Prest-O-Torch is used with a large size tank, a shut-off may be provided at the torch by using an automatic pressure regulator at the tank, regarding which information will be furnished on request.

Prest-O-Lite is a system furnishing pure, ready-made acetylene gas in steel cylinders of convenient size. A Prest-O-Lite, when empty, may be taken to any Prest-O-Lite dealer and exchanged for a full one upon payment of a small exchange fee.

Prest-O-Lites are manufactured under a special formula of The Prest-O-Lite Co., Inc., and are backed by a universal exchange system which includes practically all large cities and towns and most villages throughout the country.

Prest-O-Soldering Iron

Prest-O-Soldering Iron as ordered is fitted with a 1 lb. or 2 lb. soldering head of highest quality drop forged copper. Each outfit includes 6 feet of rubber hose and a union for attaching to either Style MC or to Style B and E Prest-O-Lites, as specified.

List No.		List Price Each
330935	Prest-O-Lite Soldering Iron, 1 lb. size.....	\$6.00
330936	Prest-O-Lite Soldering Iron, 2 lb. size.....	6.50

Prest-O-Torch, Style A,
With MC CylinderPrest-O-Torch, Style C,
With E, B, or A Cylinder

Prest-O-Torch

Style A torch has a heat sufficient for brazing steel up to $\frac{3}{8}$ inch diameter. Style B torch gives a flame with an intense heat ideal for work of jewelers, dentists, etc. Style C provides a flame about three times as large as Style A and successfully brazes solid steel bars up to 2 inches diameter.

MEASURING TAPES

Enameled Steel Case

Star Steel Tape

Cotton Tape

Enameled Steel Case with Brass Trimmings

These tapes are half inch in width, enclosed in an enameled steel case, brass bound. They are the cheapest tape made, and are only adapted to the most ordinary work; although printed from a standard, they are liable to variations in use.

List No.	Mfr. No.		List Price per Doz.
760904	30	25 feet $\frac{1}{2}$ inch cotton ass' skin.....	\$5.90
760905	33	50 feet $\frac{1}{2}$ inch cotton ass' skin.....	7.86
760906	35	75 feet $\frac{1}{2}$ inch cotton ass' skin.....	11.80
760907	37	100 feet $\frac{1}{2}$ inch cotton ass' skin.....	14.16

Star Steel Tape

This tape is $\frac{3}{8}$ inch wide and the case is made of steel, nickel plated, and fitted with flush handle. It is one of the most popular tapes on the market for the reason that it is strongly made, winds easily, is compact in form, and although cheap is very durable.

List No.	Mfr. No.		List Price Each
760908	497	25 feet $\frac{3}{8}$ inch steel tape.....	\$4.44
760909	500	50 feet $\frac{3}{8}$ inch steel tape.....	5.34
760910	502	75 feet $\frac{3}{8}$ inch steel tape.....	7.12
760911	503	100 feet $\frac{3}{8}$ inch steel tape.....	9.50

Steel tape lines will be coppered or nickel plated to prevent rusting when so ordered, at an advance in price.

Metallic Warp Tape

Enameled Linen Tape

Metallic Warp Tape

This tape is $\frac{5}{8}$ inch in width, and contains metal threads to prevent stretching. Nicely finished and reinforced on the first end with leather to prevent breaking, and is as near waterproof as possible. The cases are of heavy russet leather, fitted with flush handles, and all metal work is nickel plated.

List No.	Mfr. No.		List Price per Doz.
760912	137	25 feet $\frac{5}{8}$ inch metallic warp tape.....	\$349.0
760913	140	50 feet $\frac{5}{8}$ inch metallic warp tape.....	498.6
760914	142	75 feet $\frac{5}{8}$ inch metallic warp tape.....	698.2
760915	143	100 feet $\frac{5}{8}$ inch metallic warp tape.....	798.0

Enameled Linen Tape

Russet Leather Case

Enameled linen tape is made of corded linen tape $\frac{5}{8}$ inch wide and coated with a durable enamel, making it as nearly watertight as possible. These tapes are preferred by many to the metallic warp tape. The case is of russet leather, with nickel-plated trimmings.

List No.	Mfr. No.		List Price per Doz.
760916	124	50 feet $\frac{5}{8}$ inch enameled linen tape.....	\$39.40

760918	127	100 feet $\frac{5}{8}$ inch enameled linen tape.....	49.86

MEASURING TOOLS

No. 4801

Self-Registering Wire Gauge

This is an accurate, quick reading wire gauge. It will register instantly the B. & S. standard size of any wire from Nos. 0000 to 18, inclusive. Made of hardened finished steel. Size $2\frac{1}{4}$ inches long by $1\frac{1}{4}$ inches wide. Weighs less than one ounce.

Can be carried on the key ring or small safety chain, or in the vest pocket.

Electricians and every person handling wire should have a wire gauge for protection against errors.

List No.	Mfr. No.		List Price Each
761805	4801	Self-Registering Wire Gauge.....	\$0.38

Folding Reel

Measuring Machine

Wire Winder

Wire Measuring Outfit

This measuring outfit measures quickly and accurately all wires from No. 0 to No. 40, inclusive. It can also be used for measuring lamp cord, rope, tape, etc. It is made so that it may be fastened to either the counter or side wall and occupies but little space. It is indestructible and very neat in appearance. The winder and reel are so arranged that they may be closed when not in use, therefore occupying but little space.

List No.		*List Price Each
761806	Folding reel.....	\$6.48
761807	Measuring machine.....	22.50
761808	Wire winder.....	10.80

*Delivery F. O. B. Factory, New York City. For warehouse deliveries write nearest house.

MEASURING TOOLS

Wire Measuring Machine

Wire Meter

High Speed Indicator

Reels and Meters

A most efficient device for measuring and reeling wire and cordage of various sizes.

List No.	Description	*List Price Each	List No.	Description	*List Price Each
761000	Wire meter with reel	\$50.00	761002	Counter meter	\$32.90
761001	Meter only	32.00	761003	Cable meter only	50.00

High Speed Indicator

This indicator may be run at highest speed required without heating, and this on account of the frictionless bearing against which the inner end of the spindle revolves. The dial plate has two rows of figures, reading right or left, as the shaft may run.

List No.	Mfr. No.	Description	†List Price Each
761004	104	Complete with rubber tips	\$1.86
761005	106	Improved indicator, same as 104, with rubber handle and tips complete	2.80
761006	109	Surface speed attachments for speed indicators	.92
761007	109-A	Leather case for speed indicator	.92

B&S Wire Gauge

Micrometer Caliper

American Standard or B&S Wire Gauge

These gauges are manufactured from the best steel, and are tempered, adjusted, and warranted accurate. Size $3\frac{1}{4}$ inches in diameter and $\frac{1}{8}$ inch thick. In order to be familiar with the usage of these gauges with the decimal equivalents of the gauge numbers, we furnish both sizes with these decimal equivalents expressed in thousandths on the back, opposite to the regular gauge numbers.

List No.	Mfr. No.	Description	†List Price Each
761008	688	Size wire B&S gauge, 0 to 36	\$4.16
761334	688	Size wire B&S gauge, 5 to 36	3.32
761335	690	Size wire B&S gauge, 1 to 36	3.32
761009	690	Size wire B&S gauge, 6 to 36	2.50

Micrometer Caliper No. 2

English or Metric Measure

Measures all sizes less than one-half inch by one-thousandths of an inch. It is also made to measure all sizes less than 13 millimeters by hundredths of a millimeter. When so made the table of decimal equivalents is omitted.

List No.	Description	†List Price Each
761010	2 Range 0 to $\frac{1}{2}$ inch, or 0 to 13 mm	\$7.50
761011	.. Same, with ratchet stop	8.32
761012	.. Morocco case	.82

DU PONT BLASTING MACHINES AND ACCESSORIES

Blasting Machine

Rheostat

Galvanometer

"Du Pont" Blasting Machines

Blasting machines are being used with greater frequency as their advantages become known. Simple in design, carefully assembled and thoroughly tested before shipment, Du Pont Blasting Machines are certain to perform effectively and insure maximum results with explosives. Electrical blasting saves time in detonation. Liability to accidents caused by "hang-fires" is also eliminated.

"Du Pont" Machines are made in five sizes as listed below.

List No.	No. of Posts	Type	Dimensions	Capacity in	Weight Each	*List Price Each
				Electric Blasting Caps		
Pocket	2	Twist	2 1/8 x 3 5/8 x 3 5/8 ins.	3	4 1/2 lbs.	\$17.00
2	2	Push Down	5 1/2 x 7 3/4 x 9 3/4 ins.	1 to 10	20 lbs.	20.00
3	12	Push Down	5 3/4 x 8 1/4 x 13 3/4 ins.	1 to 30	25 lbs.	30.00
5	2	Push Down	8 1/2 x 10 3/4 x 16 1/2 ins.	1 to 100	56 lbs.	120.00
6	2	Push Down	8 1/2 x 10 3/4 x 13 1/2 ins.	1 to 150	38 lbs.	150.00

13 posts furnished in special order.

Rheostat

This rheostat is used as a cheap and effective way of determining the capacity of a blasting machine. These instruments are constructed and tested under the direction of experts. They are compact and convenient, and blasters will find them especially useful on many occasions where the capacity of the blasting machine is in doubt.

List No.	Description	Dimensions	Weight Each	*List Price Each
761027	Rheostat	3/4 x 1 3/4 x 4 1/4 ins.	5 oz.	\$10.00

Galvanometer

Especial care and attention have been given to designing this instrument with a view to producing one which would promptly detect imperfections in the blasting circuit. The galvanometer is simply constructed and has a battery cell noted for long life and constancy. The instrument is enclosed in a leather case provided with a carrying strap. The simplicity of construction, the value of its service and portability are features which make this galvanometer an invaluable aid to any blaster.

List No.	Description	Weight Each	*List Price Each
761028	Galvanometer	1 lb.	\$30.00
762015	Carrying case and shoulder strap		5.50

Du Pont Delay Electric Ignitors

These are manufactured in six delays: "First Delay," "Second Delay," etc. They can be used in tunnel work, shaft sinking and any place where it is desired to have the charges of explosives detonate with a distinct period of time between each charge. They can be used in the same series with the instantaneous electric blasting caps.

When used to detonate dynamite, it is necessary to crimp a blasting cap to the fuse. When used in wet work, cover the entire ignitor with a tarry preparation to protect them from water.

	List Prices per 100					
	4 Ft.	6 Ft.	8 Ft.	10 Ft.	12 Ft.	20 Ft.
1st Delay	\$9.00	\$10.20	\$11.40	\$12.60	\$13.80	\$18.60
2d Delay	9.34	10.54	11.74	12.94	14.14	18.94

4th Delay	10.02	11.22	12.42	13.62	14.82	19.62
5th Delay	10.36	11.56	12.76	13.96	15.16	19.96
6th Delay	10.70	11.90	13.10	14.30	15.50	20.30

*Delivery F. O. B. Factory, Pompton Lakes, N. J. For warehouse deliveries write nearest house.

DU PONT BLASTING SUPPLIES

Du Pont Electric Blasting Caps

Especial attention is given in the selection of materials for Du Pont Electric Blasting Caps to insure satisfaction. They are carefully assembled and packed. These electric blasting caps are packed in cartons containing 25 or 50, depending on length of wires. Special insulation provided for electric blasting caps for submarine and very wet work. Prices given are for electric blasting caps with 4 foot wires.

List No.	Color of Label	Length of Shell	Caliber of Shell	Weight of Charge Grains	Grams	*List Price per 100
6	Red	1 1/2	.273	15.4	1.	\$9.60
8	Green	2	.273	30.8	2.	12.10

Longer lengths in multiples of 2 feet, add \$1.08 list per 100 electric blasting caps for each two feet up to 20 foot wires.

Electric Squibs

For Use With Blasting Powder Only

These squibs are similar in general appearance to Du Pont Electric Blasting Caps, but have a heavy paper cap instead of a copper one. Electric squibs are advantageous to use for the following reasons:

Ignition of blasting powder in center of charge giving a quicker and stronger action; more production from given amount of powder; instantaneous firing; absence of fumes caused by burning fuse; small quantity of smoke emitted by blasting powder.

Electric Squibs are made with 4, 5, 6, 8, 10 and 12 foot copper wires. Those having iron wires longer than 8 feet are not recommended. They are packed 50 to the carton and 10 cartons to the case.

List No.	Length of Wires	Gross Weight per Case	*List Price per 100—	
			With Copper Wires	With Iron Wires
761032	4 feet	24 lbs.	\$7.50	\$6.50
761034	6 feet	30 lbs.	8.70	7.30
761035	8 feet	36 lbs.	9.90	8.10
761036	10 feet	41 lbs.	11.10
761037	12 feet	51 lbs.	12.30

When ordering specify whether copper or iron wires are desired.

Du Pont Delay Electric Blasting Caps

By employing these detonators, a distinct period of time elapses between the explosion of the "Instantaneous" "First Delays" and the "Second Delays." They are advantageous for use in tunnel work, as much time is saved in detonation of charges.

Distinction between the three types of Delay Electric Blasting Caps is made apparent by observing that "Instantaneous" have black wires, "First Delays" red wires, and "Second Delays" white wires. Electric blasting caps are made in grade No. 6 only.

List No.	Length of Wires	*List Prices per 100—		List No.	Length of Wires	*List Prices per 100—	
		Red Wires First Delay	White Wires Second Delay			Red Wires First Delay	White Wires Second Delay
761038	4-foot	\$22.70	\$23.36	761042	12-foot	\$27.50	\$28.16
761039	6-foot	23.90	24.56	761044	16-foot	29.90	30.56
761040	8-foot	25.10	25.76	761046	20-foot	32.30	32.96
761041	10-foot	26.30	26.96				

When ordering specify whether "First Delay" or "Second Delay" Electric Blasting Caps are desired.

Du Pont Cap Crimper

This inexpensive and efficient tool should be included in every blasting equipment. It enables a blaster to make a secure, waterproof, and effective connection of blasting cap and fuse. A fuse cutter, pointed handle for punching holes in cartridge, and provision for chain attachment complete this practical device for insuring proper detonation of explosives.

List No.	Description	*List Price	
		Each	Per Doz.
761047	Cap Crimper	\$0.60	\$6.00

Leading and Connecting Wires

Leading Wire

Leading wire is for connecting electric blasting caps with the blasting machine. It consists of a No. 14 B. & S. copper conductor, insulated with a round of saturated cotton, over which is placed a paraffined outer braid, to repel moisture. The construction of this wire corresponds to dampproof office wire. It may be furnished also in the Duplex, or two conductor, type.

Connecting Wire

Connecting wires used to connect electric blasting caps in series where the wires are not long enough to reach the adjoining bore holes; each end of this series circuit is then connected to the leading wire. The wire consists of either a No. 20 or No. 21 gauge copper conductor with a paraffined outer braid over all. The construction of this wire corresponds to that of ordinary annunciator wire.

*Delivery F. O. B. Factory, Pompton Lakes, N. J. For warehouse deliveries write nearest house.

All weights are approximate, but are exact enough for all practical purposes.

USEFUL TABLES

STANDARD SYMBOLS FOR WIRING PLANS

AS ADOPTED AND RECOMMENDED BY

THE NATIONAL ELECTRICAL CONTRACTORS' ASSOCIATION OF THE UNITED STATES AND THE AMERICAN INSTITUTE OF ARCHITECTS,

Copies may be had on application to the Sec'y of The Nat. Elec. Cont. Assn't'n, Union, N. Y., and the Sec'y of The American Inst. of Architects, Washington, D. C.

	Ceiling outlet; Electric only. Numeral in center indicates number of Standard 16 C. P. Incandescent Lamps.	
	Ceiling Outlet; Combination. ‡ indicates 4-16 C. P. Standard Incandescent Lamps and 2 Gas Burners. If gas only	
	Bracket Outlet; Electric only. Numeral in center indicates number of Standard 16 C. P. Incandescent Lamps.	
	Bracket Outlet; Combination. ‡ indicates 4-16 C. P. Standard Incandescent Lamps and 2 Gas Burners. If gas only	
	Wall or Baseboard Receptacle Outlet. Numeral in center indicates number of Standard 16 C. P. Incandescent Lamps.	
	Floor Outlet. Numeral in center indicates number of Standard 16 C. P. Incandescent Lamps.	
	Outlet for Outdoor Standard or Pedestal; Electric only. Numeral indicates number of Stand. 16 C. P. Lamps.	
	Outlet for Outdoor Standard or Pedestal; Combination. ‡ indicates 4-16 C. P. Stand. Incan. Lamps; ‡ Gas Burners.	
	Drop Cord Outlet.	
	One Light Outlet, for Lamp Receptacle.	
	Arc Lamp Outlet.	
	Special Outlet, for Lighting, Heating and Power Current, as described in Specifications.	
	Ceiling Fan Outlet.	
	S. P. Switch Outlet.	Show as many Symbols as there are Switches. Or in case of a very large group of Switches, indicate number of Switches by a Roman numeral, thus: <i>S XII</i> , meaning 12 Single Pole Switches. Describe Type of Switch in Specifications, that is, <i>Flush or Surface, Push Button or Snap</i> .
	D. P. Switch Outlet.	
	3-Way Switch Outlet.	
	4-Way Switch Outlet.	
	Automatic Door Switch Outlet.	
	Electrolux Switch Outlet.	
	Meter Outlet.	
	Distribution Panel.	
	Junction or Pull Box.	
	Motor Outlet; Numeral in center indicates Horse Power.	
	Motor Control Outlet.	
	Transformer.	
	Main or Feeder run concealed under Floor.	
	Main or Feeder run concealed under Floor above.	
	Main or Feeder run exposed.	
	Branch Circuit run concealed under Floor.	
	Branch Circuit run concealed under Floor above.	
	Branch Circuit run exposed.	
	Pole Line.	
	Riser.	
	Telephone Outlet; Private Service.	
	Telephone Outlet; Public Service.	
	Bell Outlet.	
	Buzzer Outlet.	
	Push Button Outlet; Numeral indicates number of Pushes.	
	Annunciator; Numeral indicates number of Points.	
	Speaking Tube.	
	Watchman Clock Outlet.	
	Watchman Station Outlet.	
	Master Time Clock Outlet.	
	Secondary Time Clock Outlet.	
	Door Opener.	
	Special Outlet; for Signal Systems, as described in Specifications.	
	Battery Outlet.	

SUGGESTIONS IN CONNECTION WITH STANDARD SYMBOLS FOR WIRING PLANS

It is important that ample space be allowed for the installation of mains, feeders, branches and distribution panels.

It is desirable that a key to the symbols used accompany all plans.

If mains, feeders, branches and distribution panels are shown on the plans, it is desirable that they be designated by letters or numbers.

Heights of Centre of Wall Outlets (unless otherwise specified)

Living Rooms	8' 6"
Chambers	5' 0"
Offices	6' 0"
Corridors	6' 3"

Height of Switches (unless otherwise specified)

4' 0"

NOTE—If other than Standard 16 C. P. Incandescent lamps are desired, Specifications should describe capacity of Lamp to be used.
